MESSRS. MANNING & SON, on the PREMISES, Rolle Quay, Barnstaple, at TWO o'clock in the afternoon precisely, the undermentioned valuable MACHINERY, viz.:—A horizontal high-pressure steam-engine, 28-inch cylinder, 2 feet stroke, by Coupe, of Wigan, fixed new in 1861, in excellent condition; two Cornish boilers, one 18 feet long, 4½ feet diameter, the other 22½ feet long, 4½ feet diameter, with the requisite fittings; a rack-bench, 60 feet long, with two circular saws; cast iron saw-bench and circular saw, a sweep cutting machine, by Robinson, of Rochdale, and 3 inch wrought-iron shaft, 45 feet long, with plummer blocks, brass bearings, driving drums, &c. The above have been used in working saw mills and wood-turning works, and will be found well worth the attention of any one requiring such machines.

Dated, Barnstaple, November 22, 1864.

GOVERNMENT CONTRACT.—Cart Horses.—TO BE SOLD by AUCTION, by

MR. J. GOWER, at his REPOSITORY, Barbican, on FRIDAY, DECEMBER 2nd, 1864, at TWELVE o'clock, Thirteen Powerful, Active, Young CART HORSES, the property of Messrs Wilson. Have been employed on Government fortification works at Farnham, Hampshire. Also, by direction of R. Campbell, Esq. Eight Cart or Van Horses, off the Buscot Estate, sold in consequence of the improvements being completed. On view two days prior.

KENT.—Valuable Building Land, close to the Town of Maidstone, and Wood Lands in the Parish of Boxley.

MESSRS. DANIEL SMITH, SON, & OAKLEY have received instructions to SELL by AUCTION at the STAR HOTEL, Maidstone, on TUESDAY, DECEMBER 13, at THREE o'clock, in Eight Lots, the following eligible FREEHOLD PROPERTY, near to the thriving town of Maidstone, in a very pretty neighbourhood, viz. two inclosures of Freehold Land, beautifully situate a short distance from the town of Maidstone, on the north side, containing together about 21 acres, commanding extensive and picturesque views. They have frontage to two roads, and are well adapted for building purposes. Also, on the opposite side of the road to Barming, a wood, known as Scrubb's Wood, containing about 20 acres, together with a cottage, garden, and orchard, barn and yard. This also commands fine views. There is a considerable quantity of good timber. It is in a good situation for the erection of a first-class residence. Two lots of Building Land, Accommodation Land, in the parish of Boxley, close to Maidstone, and with valuable frontages to the river Medway, containing together about 8 acres. These plots adjoin Messrs Macey & Co.'s paper-mills, and are in a capital situation for the erection of manufacturing premises. A Ground-rent of 42l per annum, well secured upon the paper mills and premises of Messrs. Macey & Co. and the dwelling-house adjoining, the whole occupying an area of about 3 acres. Also a thriving Copse, known as Abbey or Little Cowback Wood in the parish of Boxley, on the road to Bredhurst, containing about 14 acres.—Particulars and plans may be had of Messrs. BENNETT, DAWSON, & THORNHILL, Solicitors, 2, Newsquare, Lincoln's-inn; I. P. EVANS, Esq. Griff, near Nuneaton; of H. PEPPERCORN, Esq. Red Hollins, Kent; at the Place of Sale; and of Messrs. DANIEL SMITH, SON, & OAKLEY, Land Agents and Surveyors, 10, Waterloo-place, Pall-mall, S.W.

MESSRS. WILLIS & HARROW beg to announce that their SALE of MATERIALS in Turnwheel-lane, City, advertised to take place on the 22nd inst. is POSTPONED until WEDNESDAY next, the 30th instant.

3, Newman court, Cornhill, Nov. 24, 1864.

To Dealers in Materials, Lead Merchants, and Others.—Very excellent Building Materials, Hereford-street, Oxford-street.

MR. GEO. HAINES announces FOR SALE by AUCTION, on the PREMISES, on MONDAY, DECEMBER 5, at ELEVEN for TWELVE precisely, all the valuable MATERIALS of TWO Spacious FAMILY MANSIONS, Nos. 15 and 16, Hereford-street: comprising many thousands of prime sound bricks, several tons of lead, the large roofs covered with sound slating and sound timbers; numerous glazed sashes, panelled doors, clean batten floors and stout joists, statuary marble chimney-pieces, water-closets, and useful fittings of the numerous rooms; two principal stone staircases, pavement of hall, iron balconies, railings, and fixtures, with brick erection of two sets of large stables and coach-houses and fittings.—May be viewed. Cards and Catalogues of Messrs. HAINES & SON, Moorgate-street, City; and at the Auctioneer's Offices, Grosvenor street West, Eaton-square, and No. 12, High street Kensington.

IN BANKRUPTCY.—To Plumbers, Decorators, Builders, and Others

MR. NASH will SELL by AUCTION, at 34, Maiden lane, Covent Garden, on WEDNESDAY next, at TWELVE, the GOODWILL of the old established BUSINESS, also at the same time, in Lots, the STOCK and UTENSILS, comprising sheet and pipe lead, traps, service-boxes, spring valve and pan closets, water-butts, brass work, colour cars, cisterns, ladders, benches, office fittings, iron safe, household furniture and effects.—On view day prior and morning of Sale. Catalogues of Messrs. S. J. BENETTA & CO. Accountants, 39, Moorgate-street, E.C.; and of the Auctioneer, 41, Basinghall-street, E.C. and Ball's-pond, N.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception rooms, two being 50 feet in length, eleven bed-rooms, stabling for eight horses and coach-houses for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouse, &c. all of 3½ acres; gravelly soil; near Sunningdale Station, South Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell-square.

WESTON-SUPER-MARE, Somerset.—BRILLIANT MARINE SALE.—Freehold [illegible] having [illegible] Sea, [illegible] Pier; [illegible] grass [illegible] per annum. [illegible] to be sold in lots. The whole can be sold in one.—Apply to Mr. B. G. PHILLIPS, Westonsuper-Mare.

SUNBURY COURT ESTATE.—This Estate is now TO LET on BUILDING LEASES for the erection of detached residences of a superior class. The property is situate within a mile of the Sunbury Station, on a line within three quarters of a mile of the Hampton Station of the Thames Valley Railway.—For particulars apply to Mr. R. R. ARNTZ, Architect and Surveyor, No. 4, Cannon-row, Westminster, S.W.

ELIGIBLE FREEHOLD LAND in the heart of the City.—The Court of the Worshipful Company of Mercers are prepared to receive TENDERS for the SITE of the PREMISES numbered 2, 3, 4, 5, 6, and 7, on the east side of Basinghall-street, in the City of London, on a Building Lease of 61 years from Michaelmas, 1865. A plan of the ground, which may be tendered for either in three distinct lots or parcels, or in its entirety, may be seen at the Office of Mr. GEORGE SMITH, Surveyor to the Mercers' Company, Frederick-place, Old Jewry, E.C. where such Tenders are to be delivered on or before TWELVE o'clock on the 31st DECEMBER, indorsed "Tender for Ground, Basinghall-street."

BRICK-EARTH.—TO LET, about FIVE ACRES of good CLAY, seventeen miles from London, near a railway, where building is rapidly increasing, and there is a great demand for bricks.—For particulars apply to Mr MARTIN, Caterham, Surrey

NOTTING-HILL.—WANTED to PURCHASE, a SMALL HOUSE near Notting-Hill or Bayswater Price from 600l. to 650l. Rental not less than 50 per cent.—Address, R. B. Mr Goddard's, 51, Great Portland-street, W. by letter only.

BUILDING LAND.—EGHAM, SURREY. About 70 ACRES adjoining Engle-field-green, TO BE LET, in Plots, or otherwise, on Lease for 99 years.—For particulars and Plan apply to Mr JOHN CLUTTON, 9, Whitehall place, Westminster, S.W.

TO BRICK and TILE MAKERS.—TO BE SOLD by PRIVATE CONTRACT, a FIELD, containing about 6 acres of excellent Brick and Tile Earth, from 5 feet to 45 feet in depth. Price, with tile-kiln and shed, 1,200l.—For particulars, apply to Mr. T. G. BROWNING, Auctioneer and Appraiser, Whitstable, Kent, where sample bricks and tiles may be seen.

SPACIOUS MANUFACTURING PREMISES, TO BE LET, on lease, 2½ miles from the City. Well adapted for any large business; frontage nearly 300 feet, and depth about 150 feet. The Regent's Canal, Bow, and Hackney Railway Trough is but a quarter of a mile distant, and the Brighton line of railway runs over a portion of the property. Covered space about 12,000 square feet. Considerable plant is on the premises, and may be taken or not at the tenant's option.—Further particulars of Messrs. DEBENHAM & TEWSON, 80, Cheapside, E.C. where a plan may be seen.

BUILDING LAND TO BE LET, by Tender, on 10th DECEMBER.—PIPER'S TRUST ESTATE, Windham-road, Camberwell.—Full particulars for Tender and plans can be obtained at the Surveyors' Offices, WALES & SPARKS, 2, Great St. Helen's, E.C.

TO BRICKMAKERS.—TO BE SOLD, a QUANTITY of BRICK EARTH, in a field near Conyer Wharf, Teynham.—For particulars, apply to Mr. GEORGE WEBB, Tunstall, near Sittingbourne.

BUILDING LAND, TO BE LET, Vincent-square, Vauxhall Bridge-road, Westminster.—Block 1, laid out for seven 10-roomed houses; block 2, for nine 11-roomed houses; and four 3 ditto, with large open area in the centre, suitable for a mews or manufactory (lease sixty years).—A block plan can be seen at Mr. J. JOBSON'S, 2, Rochampton place, Vauxhall Bridge-road, Westminster, to whom application must be made

TO BUILDERS, CAPITALISTS, and OTHERS.

The following PLOTS of FREEHOLD LAND, situate at Fulham, S.W. TO BE LET, on Building Leases, on such terms as will enable the lessees to secure from thirty to fifty per cent. improved ground-rentals, with immediate possession. Gravel soil; sand for building. Main drainage nearly completed.

No. 1.—North side of Fulham-road, opposite Munster-terrace; 1½ acres, with a frontage of 1,045 feet to the road; total frontage, including cross roads, 4,500 feet. The 2 acres of the Freehold would be 8 l.

No. 2.—South side of Fulham-road, opposite Mr. Dancer's; 6 acres; 370 feet frontage to road, with a depth of 645 feet; 3,420 feet total frontage.

No. 3.—On south side Hiringham lane, between Mulgrove House and Broom-lane; 343 feet frontage, 200 feet deep; overlooking a meadow of 20 acres.

No. 4.—Blake-road, entered from Princess-terrace, Walham Green; 4 acres; 1,060 feet frontage still unlet; with large back area for stables or cottages.

No. 5.—A Plot of 10 acres, overlooking Sel Brook Common; main-drainage sewer running through it from north to south; main road, 1,860 feet long, 50 feet wide, already formed. Total building frontage, 3,620 feet

No. 6.—Fulham Fields, for the erection of 60 cottages on two main roads.

No. 7.—North End near the Hermitage; 1,100 feet frontage.

No. 8.—On the banks of the Thames, nearly 10 acres; 700 feet frontage to the river, and 440 feet in depth. A large quantity of screened Pit Gravel for Sale, cheap. For particulars apply at Mr. A. MOSELEY'S Offices, 7, Charing-cross, S.W.

BUILDING SITE REQUIRED.—To PURCHASE, or LONG LEASE, a PLOT of LAND, containing about 3,000 superficial feet, within one mile North, South, East, or West of Lincoln's-inn-fields.—Particulars to be sent to Messrs. WILLIAM MAYHEW & CALDER, Architects, 5, Charing-cross, S.W.

CITY of LONDON, near.—TO BE LET, on a Building Lease, a splendid SITE of GROUND, containing about 17,000 feet superficial, in a leading thoroughfare, five minutes from London Bridge; 80 feet frontage; no question of lights; back entrance.—Address, ALPHA, 104, London-wall, E.C.

THE LONDON and GENERAL WATER PURIFYING COMPANY (Limited).

Capital 100,000l. in 10,000 shares of 10l. each.

First issue 5,000 shares. Deposit, 1l. per share upon application, and 1l. on allotment

Subsequent calls not to exceed 2l. per share, and at intervals of not less than three months.

Chairman of Directors—The Viscount de Vesci, M.P.

Bankers—Messrs. Dimsdale & Co. 50, Cornhill, E.C.

Brokers.

Sir Robert W. Carden & Co. 2, Royal Exchange-buildings, E.C.

Solicitor—Henry Smith, Esq. 33, Norfolk street, Strand, W.C

Secretary—H. P. Keighley, Esq.

Temporary Offices—12, Charing-cross, S.W.

The Company having purchased Mr. F. H. Dinchell's patent of his filter for purifying water direct from the cistern, and also a cleaning apparatus, are now prepared to carry out the suggestion of Arthur Aikin, Esq. D. and other sanitary authorities.

The filter through which the water is caused to pass when being drawn will be placed in the cistern, will yield the water pure, limpid, and free from colour and taste; it will arrest the impurities in mechanical suspension, and deprive the water of all organic contamination and metallic oxides in solution. The water is filtered the last moment when required for use, and, therefore, is not liable to acquire fresh taint from standing.

The filter will require no attention on the part of servants or others more than it will be fixed and periodically cleansed, and replaced when necessary, and otherwise kept in order by the Company, in houses in and about London. The cisterns will be cleaned out at least once a year, and oftener if required, at the following annual rentals to be paid in advance upon being fixed, beyond which no other expense will be incurred:—

	Per annum.
	Rental.
Filter No. 1, yielding half a gallon per minute	£0 7 6
Filter No. 2, yielding one gallon per minute	0 12 6
Filter No. 3, yielding two gallons per minute	1 0 0
Filter No. 4, yielding four gallons per minute	1 10 0

The first two of these filters are supplied for drinking purposes with a separate pipe, which may be led to any part of the house below the cistern.

The two last are calculated to filter all the water which passes through the common supply pipe.

The Company are prepared to extend their operations to other large and populous places supplied with water like unto the metropolis, and where agencies can be established. They also undertake the sale of cistern filters where a rental would be impracticable, and to supply them and the softening apparatus to the Naval and Military Services, water companies, clubs, breweries, laundries, steam boilers, hotels, hospitals, workhouses, prisons, barracks, and other Government and large establishments, on terms to be agreed upon.

Testimonials of the efficiency of the filters from eminent members of the medical profession and others who have them in use can be inspected at the Offices of the Company, where the filter can be seen, and any information obtained.

Applications to be made to the Secretary, from whom forms can be obtained. The filter will be supplied on and after the 1st of January, 1865, in the order in which application is made.

Applications for the remainder unallotted shares of the first issue to be sent to the Bankers, Brokers, Solicitors, or to the Secretary, from whom respective forms can be obtained.

THE LONDON and GENERAL WATER PURIFYING COMPANY (Limited) beg to give Notice that the SHARE LIST for the First Issue will CLOSE on SATURDAY, the 10th of DECEMBER next. Upon a further issue, a preference will be given to the then existing shareholders.

THE LONDON and GENERAL WATER PURIFYING COMPANY (Limited).

AGENTS being REQUIRED throughout the metropolis and suburbs, and in other populous places, applications to the Secretary from those desirous of undertaking the Company's Agency, upon terms to be agreed upon, are invited

H. P. KEIGHLEY, Secretary.

No. 12, Charing Cross, S.W.

TO BUILDERS and OTHERS.—TO BE SOLD by TENDER, the Interior FITTINGS and FIXTURES of FLATMER CHAPEL, Sclattergouire, consisting of the pews, pulpit, galleries, &c. Tenders will not be received after the 10th of DECEMBER next.—Further particulars may be had of Mr. T. SMITH, 5, Rose place, Sclattergouire.

WANTED, OAK PARK PALING.—1,000 feet of 5 ft.; 360 feet of 6 ft. 6 in.; and 1,000 of strong garden partition fence, 6 ft. 6 in.—Price for cash of each sort per rod, including putting up, at Ealing.—Apply to Mr. WEEKS, 3, Selsley-place, Whitehall-grove, Chelsea.

WOODEN or IRON ROOM WANTED, about 2 feet wide by 3½ feet or 40 feet long. Must be in good condition and only recently used.—Send price and full particulars to R. B. 125, Houndsditch, City.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of Cox & Wyman, Nos. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," No. 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, November 26, 1864.

A BUILDER is desirous to meet with any Party who would ADVANCE him from 300£ to 400£. in the ERECTION of a HOUSE. He will give leasehold property in security for the sum for ten years. Interest to be agreed on.—Address, with real name, Z. D. Office of "The Builder."

CONTRACTS.

WAR DEPARTMENT CONTRACT.—

BULL POINT, near Devonport.

TENDERS are required to be delivered to the Director of Contracts, War-office, London, S.W. on or before the 21st JANUARY, 1865, for the ERECTION of a SHIFTING HOUSE, MESS-ROOM, SERGEANTS' MESS HOUSE, ABLUTION HOUSE, and LATRINES; also for BUILDING a WATER RESERVOIR and PUMPING and LAYING HOME MAINS and BRANCH CAST IRON PIPES.

Printed forms of tender, and other particulars, may be had at the Royal Engineer Office, Devonport, on MONDAYS, between the hours of ELEVEN and THREE, or at the Royal Engineer Office, Bull Point, on any other day of the week.

HENRY GENLIS-EATWELL, Colonel Commanding Royal Engineers, Western District.

Devonport, 29th Nov. 1864.

TO IRONMASTERS, IRONFOUNDERS, &c.—LONDON, BRIGHTON, and SOUTH COAST RAILWAY COMPANY.—The Directors are prepared to receive TENDERS for the SUPPLY and ERECTION of the IRON WORK required in the construction of a Small Timber Viaduct, Wrought-iron Lattice Girders, Cast-iron Columns, and Cast-iron Screw Piles, at Newhaven, in accordance with Specifications and Drawings, and obtained upon application to Messrs. CHARLES FOX & SON, Engineers, 65, Victoria-street, Westminster. Tenders must be delivered at the Secretary's Office, 8 Terminus-buildings, Victoria, by twelve o'clock at noon on SATURDAY, the 17th of DECEMBER next, and will be opened on the following MONDAY, the 19th, at TEN a.m. and FIVE p.m. or on Saturday, to meet the Directors at TEN and TWO p.m. on SATURDAY, the 17th of DECEMBER next. Each Tender must be accompanied by a Deposit for the due performance of the Contract, and must be made on the Printed Form of Tender, which may be had on application at the Secretary's Office, London Bridge Station, on and after MONDAY, the 28th instant.

The Directors do not bind themselves to accept the lowest or any Tender.

By order,

FREDERICK SLIGHT, Secretary.

Secretary's Office, London Bridge Station,
28th November, 1864.

NOTICE to RAILWAY CONTRACTORS.

LONDON, BRIGHTON, and SOUTH COAST RAILWAY COMPANY.—The Directors are prepared to receive TENDERS for the CONSTRUCTION of the Company's NEW RAILWAY, being a length of Two Miles or thereabouts, commencing at Peckham Rye and terminating at the Company's Croydon Railway, and other Works connected therewith. Plans and Sections may be seen, and Specifications and Forms of Tender obtained, at the Company's Office, No. 8 Terminus-buildings, Victoria, by twelve o'clock at noon on MONDAY, the 12th of DECEMBER next, when the Tenders will be opened. Each Tender must be accompanied by a Deposit for the due performance of the Contract, and must be made on the Printed Form of Tender, which may be had on application at the Secretary's Office, London Bridge Station, on and after MONDAY, the 28th instant.

The Directors do not bind themselves to accept the lowest or any Tender.

By order,

FREDERICK SLIGHT, Secretary.

Secretary's Office, London Bridge Station,
24th November, 1864.

WORKINGTON LOCAL BOARD.—SEWERAGE WORKS.—To SEWERAGE CONTRACTORS and OTHERS.—The Local Board of the District of Workington, in the county of Cumberland, hereby give notice that they are prepared to receive TENDERS from parties willing to undertake the following contract:—

Contract No. 1. For the CONSTRUCTION of about 3 SEWERS, FARTHENWARE and CAST IRON PIPE DRAINS, MANHOLES, VENTILATING SHAFTS, GULLIES, and other WORKS.

Plans, sections, detail drawings, and specifications, may be seen, and duplicate forms of Tender, bills of quantities, and schedules for signature, may be obtained on application at the Surveyor's Office, in pursuance of Tenders will be received at the Office of Mr JOHN ASKEW, Clerk to the Local Board, Workington; or at the Office of Messrs. JOHN LEWIS & SON, Civil Engineers, Westminster, on and Tenders, addressed to the Chairman of the Local Board, to be delivered at the Office of the Local Board, on or before SATURDAY, the 10th day of DECEMBER next. The Local Board do not bind themselves to accept the lowest or any Tender.

(Signed) JOHN ASKEW, Clerk to the Local Board.

Workington, 12th November, 1864.

BOROUGH of STOCKPORT.—SEWAGE WORKS.—The Local Board of Health of Stockport is prepared to receive TENDERS for the SUPPLY of VITRIFIED STONEWARE PIPES and MATERIALS and LABOUR required in the CONSTRUCTION of the HEATON-LANE MAIN INTERCEPTING SEWER, together with the Storm Gutters, Manholes, Ventilating Shafts, Gullies, and other Works connected therewith. Plans, sections, and specifications may be seen, and forms of tender and all requisite information obtained, on and after MONDAY next, on application to Mr. BRIGGS, C.E. Engineer, Blackburn; or to Mr. TAYLOR, Heaton Surveyor, at his offices, Tiviot Dale, Heaton Norris. Sealed tenders endorsed "Tender for Main Sewer, &c." addressed to the Chairman of the Local Board, will be received at the Office of the Board, on or before WEDNESDAY, the 14th day of DECEMBER next. The Local Board will not be bound to accept the lowest or any Tender.

HENRY GOODWIN,
Town Clerk, and Clerk to the Local Board.

Stockport, Nov. 17, 1864.

THE KEIGHLEY and WORTH VALLEY RAILWAY COMPANY.—CONTRACTS for SUPPLY of PERMANENT WAY MATERIALS.—The Directors of the Keighley and Worth Valley Railway Company are prepared to receive TENDERS for the SUPPLY of RAILS, CHAIRS, SLEEPERS, KEYS, FISH-PLATES, BOLTS, SPIKES, &c. required in the construction of the above Railway. Specifications and Forms of Tender may be had on application to T. MYLAND-POLEY GILL, C.E. Engineer, 21 and 22 Queen-st., Bradford, Yorkshire, from whom information may be had as to the Quantities, &c. Tenders to be delivered at the Offices of the Company, 21 and 22 Queen-street, Bradford, on or before TWELVE o'clock at noon on MONDAY, the 12th day of DECEMBER next. The Directors do not bind themselves to accept the lowest or any Tender. Any order of the Directors.

JONATHAN GILL, Secretary.

Oakworth, Keighley, 21st November, 1864.

[For remainder of Contracts see next Page.

ST. MARY, ISLINGTON.—COUNTY of MIDDLESEX METROPOLIS LOCAL MANAGEMENT ACT.—The IRONFOUNDERS and OTHERS.—Notice is hereby given, that a Committee meeting of the Vestry of the Parish of St. Mary, Islington, will be held on WEDNESDAY, the 14th day of DECEMBER next, at SEVEN o'clock in the evening, to receive TENDERS and to CONTRACT for a SUPPLY of GAS LAMP POSTS and CANDELABRUMS for the ensuing year. The patterns may be seen on application to the Inspector, at the Chapel House, Holloway-road. The average weight of each post and column to be 4 cwt. 2 qrs. The whole to be delivered, weighed, and set well away at the Istchouse, Chapel-de-Ease, by the Contractor, within a month, and the contract price to be paid within the space of a month after the contract shall be completed. Sealed Tenders, stating the price per ton, to be delivered at the Vestry offices previously to the above meeting. Persons Tendering should attend the Committee. No Tender will be received after SEVEN o'clock, nor will any Tender be received, unless it contain one half Bank of England note, which will be immediately returned to persons whose Tenders may not be accepted, but will be retained in the other case, until the Contract is executed; and in default of the contract being duly executed the sum deposited shall be forfeited to the Vestry. The Vestry do not bind themselves to accept the lowest or any Tender.

JOHN LAYTON, Vestry Clerk.

Vestry Offices, Upper-street, November, 1864.

TO BUILDERS.—Parties willing to TENDER for the proposed ADDITIONS to the ESTABLISHMENT of the LAITY of NOTRE DAME, at Mount Pleasant, Lower Pond, Hackney, can receive any further information on application to the Architect, Mr. Hardy Dawson, 18, Great Portland-street, Oxford-street, by applying not later than TUESDAY next.

TO CONTRACTORS, BUILDERS, AND OTHERS.

PIT GRAVEL and BALLAST may be had at VERY LOW RATES at Argyll House, Argyll street, Regent-circus, Oxford-street.

GRAVEL, as it rises, is per cubic yard.
BALLAST, screened, 1s. 6d.

For a LIMITED TIME ONLY, to burn on the works. Contractors and others are invited to take a large regular quantity dealt with on still more liberal terms.

Apply to the CLERK of the WORKS, on the Premises, back entrance in Marlborough-mews, Great Marlborough-street; or by letter to G. A. HAIG & CO. 134, Fenchurch-street, City, E.C.

TO TIMBER MERCHANTS and OTHERS.

The Directors of the London, Chatham, and Dover Railway are prepared to receive TENDERS before the 14th DECEMBER, for the SUPPLY of 1,000 rectangular and 3,000 bull-head SLEEPERS, 10 inches by 5 inches, delivered free on their wharf at Battersea. Each Tender must be signed by the Party tendering, and addressed to Mr. WILLIAM MILLS, the Company's Engineer, Victoria-station, S.W. The Directors do not bind themselves to accept the lowest or any Tender.

W. E. JOHNSON, Secretary.

Victoria Station, November 24, 1864.

LONDON and NORTH-WESTERN RAILWAY.—To CONTRACTORS.—The Directors are now prepared to receive TENDERS for the CONSTRUCTION of a SHORT BRANCH RAILWAY, about two miles long, to connect the Hereford, Ross, and Gloucester, at or near to Ross, with the Newport and Hereford line, near Hereford. Part of a plan of the locality and the drawings, and a statement of the quantities upon application to Mr. W. CLARK Engineer, 19, Great George-street, on and after MONDAY, the 28th NOVEMBER, between the hours of TEN and FOUR o'clock. Tenders addressed to the Secretary, at the Euston Station, London, to be sent in on or before SATURDAY, the 17th DECEMBER 1864 at noon. The Directors do not bind themselves to accept the lowest Tender.—By order,

CHARLES E. STEWART, Secretary.

Euston Station, London, 27th November, 1864

MATTHEW T. SHAW, 64, CANNON STREET, LONDON BRIDGE, E.C.
Orders requiring Despatch and Punctuality can be executed in a few days.

VENTILATION.—OVERCROWDING.—Boyle's System of Natural Ventilation ensures a *more* healthy condition of atmosphere in overcrowded than is usually present in thinly-inhabited or empty places. The heat arising from the state of overcrowding is the motive power which works this system with infallible regularity and effect. The smaller, closer, hotter, and more overcrowded a place is, the easier and better can it be ventilated on this system. It is applicable to all places alike, Cottages, Mansions, Public Halls and Buildings, Churches, Hospitals, Factories, Work-rooms, Stables, Cow-houses, Conservatories, and even Mines and Ships. Let no one form a hasty conclusion from the seeming extravagance of this statement. It is a far wiser plan to examine first and conclude afterwards.

"*In one instance under our own eye Mr. Boyle has operated very successfully.*"—Article, "Air in the Corners," *Builder*, 15th October, 1864.

THOS. BOYLE, No. 23, Little St. Andrew-street, Upper St. Martin's-lane, London. Agents, Messrs. COMYN, CHING, & CO., at same address.

BROWN BROTHERS' PATENT KITCHEN RANGES,
WITH SELF-ACTING ROASTER,

A saving [illegible] twice the amount of cooking performed [illegible] kitchener of similar size and with half the [illegible] Ranges, Hobs, Ovens, Boilers, &c. [illegible] and the perfect cleanliness of a close kitchener with the perfect ventilation of an open fire.

THE PATENT AUTOMATON ROASTER

Revolves of itself immediately on being placed in front of the fire, and is considered by thousands who have used it to be the most useful [illegible] ever introduced.

Builders and others who do well to inspect the Ranges in operation, are invited to visit the NEW "ECONOMIC" RANGE with large Wrought-iron Boiler and Oven, specially adapted for Dining-houses, Villas, &c., at very moderate cost.

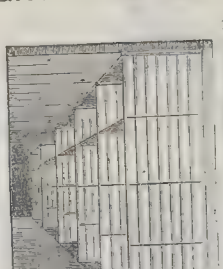


Exhibition Medal. Catalogues and Drawings post-free. Prices from £2 8s. to £60 [illegible]

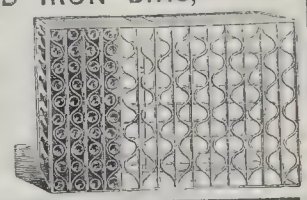
N.B.—BROWN BROTHERS establish and upwards of [illegible] years, and have no [illegible] name.

"A form of Range, which, with Apparatus in connection with it, deserves particular attention."—"BUILDER," October 11, 1862.

WROUGHT IRON WINE BINS.

FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.



The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

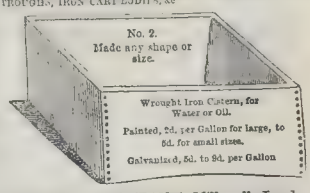
Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the Late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,
Peculiarly adapted for Private Cellars.
No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents of the Bin.



FARROW & JACKSON,

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Iron-mongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions, Cutlery, Glass, and Wood Furniture, of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilators, &c.; and the New Registered Venetian Ventilator, so much admired, 6s. 6d. each.

J. H. BOOBBYER (late STURCH & BOOBBYER), established nearly 200 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.
14, Stanhope-street, Newcastle-street, Strand, London, W.C.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL,
AWARDED 1862.
ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH
and BLIND LINES.

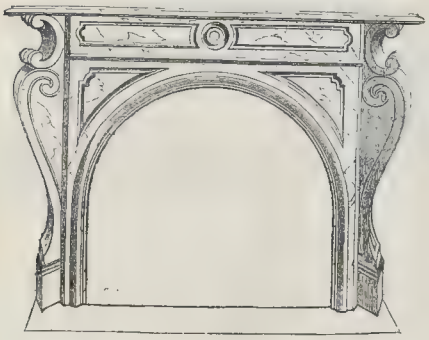
TO BUILDERS, CARPENTERS and BLIND MAKERS.

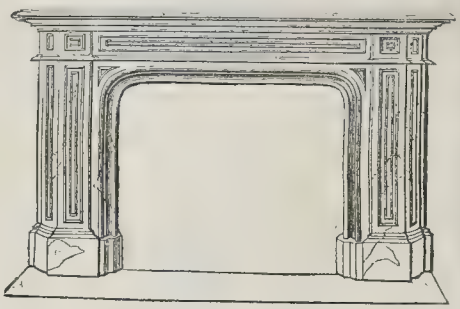
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

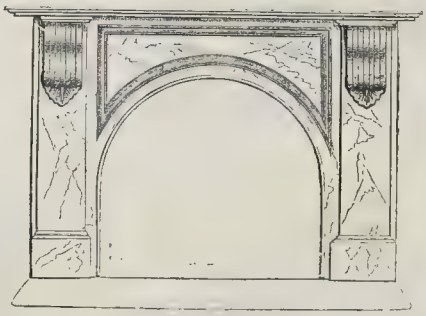
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.





THE RICHEST ASSORTMENT OF CHIMNEY-PIECES



IS AT

WILLIAM S. BURTON'S.

It embraces the following Foreign and English Marbles:—Italian Statuary, Brocatelle d'Italie, Brocatelle d'Espagne, Brocatelle Brune, Griotte d'Italie, Jaune Fleuri, Vert Antique, St. Remis, Black and Gold, Black, Rouge Royale, Vein, &c. &c.; and it includes the undermentioned styles: Renaissance, Louis XIV., Louis XV., Pompadour, Louis XVI., Moderne, à Balustres, &c. &c. Most of the designs are new; while several, from their rich and exquisite sculpture, are veritable works of art. A complete assortment of Enamelled Slate Chimney-pieces is also on show, including many elegant designs. The Prices range from 1*l.* 8*s.* to 100*l.*

WILLIAM S. BURTON,

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS.
These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and APPROVED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

BY APPOINTMENT TO H. R. H. THE PRINCE OF WALES.

J. BARTON, having entered upon the extensive Premises, No. 370, Oxford street, adjoining his Patent Stable Fitting Manufactory, begs to solicit attention to his large and well selected STOCK of STALL and LOOSE BOX FITTINGS, HARNESS ROOM REQUISITES, &c.; also to invite inspection of the newly erected Practical Stable, now on view. Illustrated Catalogues on receipt of Four stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

SMITHFIELD CLUB SHOW.—The following INVENTIONS will be EXHIBITED at the ISLINGTON AGRICULTURAL HALL, Stand 154 (a), on MONDAY, DECEMBER 5, and four following days.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

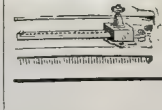
MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.
MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.
MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.
They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 5d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.



PATENT CLIMAX DOOR SPRINGS,
FOR SINGLE AND DOUBLE-ACTION DOORS.

PATENT CASEMENT STAYS, FASTENINGS, AND CUPBOARD TURNS,
GOTHIC, DROP, AND OTHER DOOR HANDLES.

PATENT BARREL BOLTS, NORFOLK, SUFFOLK, AND GOTHIC LATCHES,
BRASS AND IRON LOCKS OF EVERY DESCRIPTION.

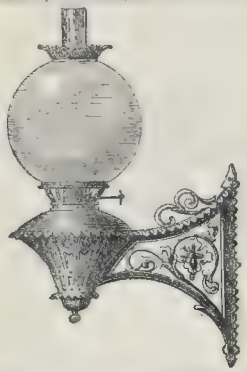
WILLIAM FURNESS,
No. 73, LIME STREET (late of Lawton Street), LIVERPOOL.

FRANCIS HAMMOND'S

VENTILATING GLOBE LIGHT.



Combining in a feasible method of lighting, with convenient simple, and [illegible] application

The advantages obtained are these:—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume about 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 21 feet per hour.
No. 5, CHANDOS STREET, CHARING CROSS, LONDON, W.C.

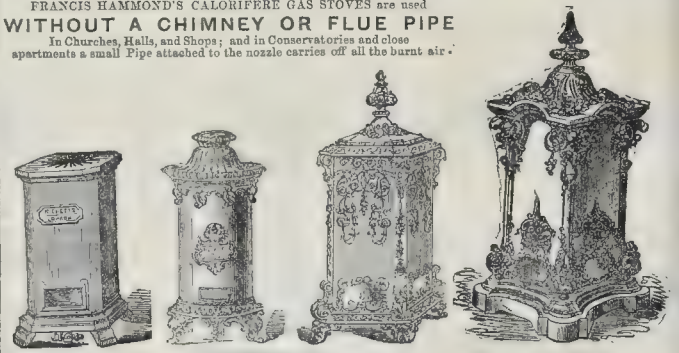
POST-OFFICE ORDERS PAYABLE AT SHOREDITCH.
A LARGE ASSORTMENT OF BEST BERLIN BLACK REGISTERS ON VIEW IN EXHIBITORS' DEPARTMENT, CRYSTAL PALACE.

HENRY DOULTON & CO.'S
PATENT COMBINED SMOKE AND AIR FLUES.
BY THIS INVENTION PERFECT DRAUGHT AND COMPLETE VENTILATION CAN BE SECURED.

The air-flue follows the line of the smoke-flue, the passages being quite distinct. The heat from the smoke-flue causes a current, which carries off the vitiated air admitted by junctions near the ceiling. The pipes or blocks are *all made to bond with ordinary brickwork.*



Where the blocks come together, each air-flue has a lip or projection, which enters the next block and completely shuts off the air-flue from the smoke-flue at the joint. This lip, with dowels at the opposite corners of the blocks, also holds the lengths firmly together.

Curves are made to suit any inclination.

Manufactured in Terra Cotta for smoke-flues equal to 12 in. 10 in. and 8 in. diameter, with ventilating-flues of proportionate size.

Small models will be forwarded to architects on application to
Henry Doulton & Co. High-street, Lambeth.

FRANCIS HAMMOND'S CALORIFERE GAS STOVES are used
WITHOUT A CHIMNEY OR FLUE PIPE
In Churches, Halls, and Shops; and in Conservatories and close apartments a small Pipe attached to the nozzle carries off all the burnt air.

SMOKY CHIMNEYS,
S. DEACON
Respectfully invites the attention of Architects Builders, &c. to his
PATENT LOUVRE CHIMNEY CAP,
which has been in use some time with perfect success in curing chimneys where other caps have been of no avail.
The advantages attending this Cap are—it can be brought in contact by the machine when the chimney is swept, the brush being able to pass through the Cap, without the liability of misplacing it, an increased up current, and the impossibility of rain entering.

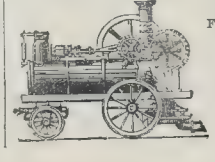
N.B.—WINSLEY-STREET IS THE STREET OPPOSITE THE PANTHEON.



HOBBS, HART, & CO.'S
MACHINE-MADE LOCKS AND STREET-DOOR LATCHES.
These Locks are recommended for all purposes requiring good security combined with economy of price and durability of wear, as by means of machinery a faultless accuracy is arrived at, which by hand labour would be impossible except at a greatly increased cost.

Architects and Engineers are requested to note that the security of these Locks consists in a series of Levers, that have to be raised to unequal positions by the bits of the key before the bolt can pass. These will bear comparison with those at treble their cost.
These Locks are made with from Two to Five Levers, and can also be made to be actuated for with Master Keys to pass.
The retail prices of Locks for Cabinet purposes are from 2s. to 4s. each; for Room Doors, 4s. to 8s. 6d. each; Street Door Latches, 7s. 6d. to 18s. each.
This Illustration represents the Two-bolt Four-lever Mortise, with Hobbs & Co.'s Patent Follower, price 8s.

HOBBS, HART, & CO.'S PATENT PROTECTOR LOCKS.
300 Guineas were offered in the late Exhibition (*the only Lock for which a Premium was offered to pick*) to any one who could pick these Locks in thirty days. Their speciality consists in the combining the two essentials of security, viz. Protection against picking by means of their Patent Movable Lever Protector, and Protection against illicit Tampering with the Key by means of their Patent Secret Protector.
These all-important principles are the special and peculiar features of HOBBS, HART, & CO.'S Patent Locks. These Locks vary in price from 10s. to 5l. 5s. each, with Solid Keys. For prices, with Changeable Keys, see 16-paged Illustrated List of Locks, Iron Doors, Safes, &c. which can be had on application.
HOBBS, HART, & CO. 76, CHEAPSIDE, LONDON, E.C.

N.B. Steam Power, with Workshops, to Let

PRIZE MEDAL AWARDED AT THE INTERNATIONAL EXHIBITION, 1862.

THE ARCHITECTURAL POTTERY COMPANY, POOLE, Dorset, Manufacturers of BALE'S PATENT INLAID MOSAIC TILES; also superior PRESSED TILES, 6 inches and 4 inches square, hexagonal and octagonal, &c.; tile red, buff, black, blue, grey, &c. for churches, entrance halls, corridors, conservatories, lobbies, verandahs, porticos, vestibules; bricks, copings, string courses, pilasters, &c.; also, white glazed tiles for bath-rooms, &c. They also beg to call attention to their NEW MANUFACTURE OF METALLINE TILES, inches by 6 inch thick, in trade lots of 500, from 3s. 6d. per 100 ft. superficial, delivered in London. Also, metallic ridge, gutter, and hip tiles, both plain and fire-bricks. Specimens may be seen, and every information obtained, at the Offices, No. 38, Parliament-street, S.W.; also at the Architectural Exhibition, 9, Conduit-street, Regent-street; Kensington Museum; the Fine Arts' Academy; and the Crystal Palace, Sydenham. — Address, The Architectural Pottery Company, 36, Parliament-street, S.W.; or Poole, Dorset.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable character. MAW & SONS Pattern-book, designed by M. Digby Wyatt, esq. together with a detailed design and estimate of cost adapted to any given dimensions of room, passage, conservatory, verandah, &c. &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of specimens of the Pavements.

TERRA COTTA and Fine STONEWARE POTTERY, warranted to stand Frost.

JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has recently improved and economized the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various many colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.

A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."

Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Crosses, Fern pots, Vases, Statues, Brackets, Consoles, Garden Edging, Guttering, Six, nine, and twelve inch Paving Tiles, &c. &c. Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.

London Office, 377, Oxford-street, W.

DEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City road Basin, N. Thirdly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietors; and Thirdly, that the "Reports of the Juries," page 581, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the manufactories known so long as "The Juries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION

MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name "MAGNUS" is upon each article.

Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. A New Illustrated Catalogue of the trade can be had at the Patent Slate Works, 39 and 40, Upper Belgrave-place, Pimlico, S.W.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR
DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, in union or exclusive of Timber or Iron Framing, in all parts of England.

Having for several years been exclusively employed in fixing DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principle introduced by Mr. Edmeston, Mr. TYLER can [illegible] with confidence refer to many [illegible] as the best recommendation.

Good Zinc only will be used in all cases, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that the [illegible] and thoroughly attended to, and at no extra cost.

Thin Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

THE LAND SECURITIES COMPANY (Limited).
Capital £2,000,000.
In 20,000 Shares of £100 each.

The Right Hon. the Lord Saye, M.P. President.

Information for using forwarded with pleasure. Postal orders or cheques in London promptly attended to. Estimates given for every kind of the above work.

The Builder.

VOL. XXII.—No. 1139.

Robert Stephenson Pontifex Maximus.

PERHAPS no other thing in the whole range of constructive art is of greater necessity than a bridge. Scarcely anything gives a higher idea of man's power, or affords a wider field for the embodiment of engineering and artistic genius. The modern command over iron in large quantities, while it afforded the material for, also led to the laying down of, railways, and, as a resulting consequence, to an enormous demand for railway bridges. It was estimated by Robert Stephenson, that up to 1856 no less than 25,000 bridges must have been built in Great Britain alone. It was only natural that Robert Stephenson should get the lion's share in the construction of these, not merely as to number, but also as to the magnitude of the bridge-building problems placed before him for solution. The name of Robert Stephenson—to be otherwise mainly remembered as a great builder of railway lines—will thus, literally, pass over to posterity on his great bridges.

His name is more especially connected with three great bridges, as important in their objects as from a scientific and practical point of view. These are the Britannia Bridge, carrying the Chester and Holyhead Railway over the Straits of Menai; the High-level Bridge across the Tyne at Newcastle; and the great Victoria Bridge over the St. Lawrence in Canada. Mr. Stephenson seems to have been conscious that his more enduring fame would rest upon his achievements in bridge work. He took a great interest in the subject; so much so, indeed, that he found time to write the article "Iron Bridges" for the eighth edition of the *Encyclopædia Britannica*. The Britannia Bridge was, at the time it was built, the most original bridge in the world; the High-level bridge is probably the highest; and the Victoria Bridge, over the St. Lawrence, is the largest bridge in the world. A remarkably clear and able chapter is given by Professor Pole* to a popular explanation of the principles, and to a sketch of the history of bridge building. As Robert Stephenson says in his article, "though in elegance and durability iron cannot compete with stone," yet its use has become an absolute necessity for railway bridges "where headway is so frequently of paramount importance, and where rapidity of execution is often a more necessary consideration than even economy or durability; while the defective foundations that have so often to be contended with render the lightness, the independent strength, and the pliable character of iron of the utmost value for such structures." The first bridges were doubtless *beams* of wood laid across the stream or the gap. Then came the *arch*, permitting a much larger span,—an invention of unknown antiquity, and developed in brick and stone with great skill by the Romans. The modern manufacture of wrought-iron has, curiously enough, caused us to revert to the primitive form of bridge,—the beam. Iron bridges were proposed in Italy in the sixteenth century; they were again mooted by Dr. Desaguliers in the beginning of the last century; and an iron bridge was begun at Lyons, in 1755, but was abandoned for a timber bridge. The first iron bridge was built in this country, in 1769, at Coalbrookdale, and in 1794 two small iron bridges were put up in Germany. Telford, in 1796, built an iron arch of 130 feet span across the Severn. In the same year was finished a bridge over the Wear, near Sunderland, said by Stephenson to be one of the boldest examples of arch construction in existence. This bridge has certainly a most romantic history. Its origin is due to the celebrated Tom Paine, who had a great talent for mechanics. He first proposed to construct cast-iron arches with framed open panels in the form of voussoirs, and he made an experimental arch of 80½ ft. span, which he exhibited at Paddington. During the same year the feasibility of superseding the dangerous ferry at Wearmouth was considered by a committee. It was decided to adopt Paine's ideas, and part of the ironwork of his experimental arch was built into the present bridge, and can still be identified. "The span of this bridge, which is in one segmental arch, is no less than 236 feet, only 4 feet less than the centre arch of Southwark Bridge, the largest in existence, and yet it contains only about one-fifth the weight of iron." This very bridge was sold by a lottery in 1816 for 30,000*l.*—8,000*l.* more than its original cost,—and some alterations it subsequently required actually formed the last work of Robert Stephenson. The cast-iron arch was afterwards rapidly developed, until it reached its apogee in the Southwark Bridge, the finest structure of this class.

Then began the present reign of wrought iron, to be, no doubt, in its turn, superseded by steel. The distinguishing property of wrought iron as compared with cast iron is its power of taking a greater tensile strain with a greater range of extension, and with much less weight of material. The first application of the tensile strength of wrought iron to bridge-work was the suspension-bridge, and this form of bridge may be said to have been fully developed by the late Captain Samuel Brown, the introducer of chain-cables into the Navy. The suspension-bridge was then taken in hand by Telford (1819), with the famous bridge over the Menai Straits as a result. This was finished and opened in 1826, three years before the great trials of the locomotive on the Liverpool and Manchester railway. With the introduction of railways a new era began for the application of iron to bridge-work, as well as to many other things:—

"Hitherto bridges had been applied generally to common roads, if the arch was elevated, inclined approaches were of small importance; and in determining the rise of his arch, the engineer selected any headway he thought proper, while every other consideration was likewise made subsidiary to the problem of constructing the bridge itself. If the suspension-bridge was chosen for the purpose, the passing load was light, and its speed of transit could be easily reduced to suit the comparatively weak nature of the structure. But on the introduction of railroads, hundreds of roads, rivers, and valleys, had to be crossed with bridges perfectly level, and of a strength and rigidity sufficient to allow the dashing masses of the tender and swift locomotive, instead of the light coach or the quiet team."

This rapidity of execution became of very much more importance than with the bridges spanning the old roads, as a stoppage at one portion of a railway line is pretty nearly equivalent to a stoppage of the whole length. The flexible suspension-bridge was quite out of the question, while the cast-iron arch was of only limited application, on account of its great weight and its incapability of being cheaply used for large spans. Some new form of bridge was thus necessary, and this was found by going back to the primitive straight beam, which is in fact the parent of many gigantic modern structures. The girder combines in itself the resistance to compression of the arch and the resistance to tension of the suspension bridge. While more rigid and firmer than a chain, it is straight, and affords a clear headway; it does not require abutments to resist horizontal strains; it is lighter than an arch, and is easily erected. Cast-iron was first employed for girders by Messrs. Boulton & Watt in 1800. Then came an important modification of the cast-iron arch in order to enable it to meet the exigencies of railway traffic. The two ends were strung together like a bow, thus taking up the horizontal thrust. The finest bridge upon the bowstring girder principle is that at Newcastle-upon-Tyne. Then came the combined girder, or a cast-iron girder in which the low tensile power of the bottom flange was aided by wrought-iron tie-rods. The progress of this form was greatly checked through the failure of a bridge on this plan at Chester, in 1847. A very full and interesting account is here given of this matter—important in itself and in its consequences. One of its results was the famous Commission of Inquiry into the Application of Iron to Railway Structures—the most valuable investigation that was ever conducted into the strength of materials. Two years previously to 1847, the experiments carried out with a view to investigate the tubular principle effected a complete revolution in bridge-building. In July, 1846, Mr. Stephenson gave instructions for a bridge on this principle, but with a cast-iron top, for a road at Chalk Farm, crossing over the North Western Railway. "This bridge was 60 ft. span; it was completed in March, 1847, and was *the first actual application* of hollow wrought-iron girders to the construction of bridges." As Mr. Pole remarks, the iron-girder bridges may be divided into eight kinds:—1, solid beams; 2, trussed cast-iron girders; 3, bowstring girders; 4, simple **I**-shaped girders; 5, tubular or hollow-plate girders; 6, triangular-framed girders; 7, lattice girders; 8, rigid suspension girders. The four last are modifications and products of the fruitful tubular principle. A very spirited account is given by Professor Pole of the erection and construction of the Conway and Menai tubular bridges; Mr. Stephenson himself has also given a narrative of the early history of the design, and several accounts of the remarkable structures have been published at different times. So much has not, however, been published about the high-level bridge at Newcastle, and the Victoria Bridge over the St. Lawrence.*

The immense importance of the high-level bridge at Newcastle-on-Tyne may be estimated from the fact that before its erection, so long ago as 1844, the cost of conveyance of passengers and merchandise by coaches and omnibuses across the river rose to the sum of 1,000*l.* per week. Robert Stephenson put the design in hand in 1845; it was passed by the Government inspector in 1849, and shortly afterwards opened by the Queen herself. The height of the rails in the upper platform above the river at low water is 120 ft., while the level of the carriage-road is about 23 ft. lower. Some of the piers are as much as 146 ft. high; many of the piles upon which they are founded are 10 ft. long, being 13 in. square, and 4 ft. centre to centre. The greatest weight to be borne by each is 70 tons,—a heavy load, and only to be warranted by the excellence of the strata. "In moderately compact clay it is usual to consider the maximum bearing power of a pile to be about 12 tons; in hard clay, about 25 tons; but in gravel, of which

* "The Life of Robert Stephenson, F.R.S., &c., &c., late President of the Institution of Civil Engineers. By J. C. Jeaffreson. With descriptive chapters on some of his most important Professional Works, by William Pole, F.R.S., Member of the Institution of Civil Engineers. London: Longman. 1864."

* Information on all of these will be found in previous volumes of the *Builder*.

the bed of the Tyne consists, 70 or 80 tons are often allowed." Stephenson, however, with his usual caution, "tested one of the piles, by laying on it a load of 150 tons, which was allowed to remain for several days; but on its removal no settlement whatever had taken place." At the time (1845) at which this bridge was designed, before the labours of the Commission on Iron Structures, the experiments which led to the adoption of the tubular girder were only just begun, so that Robert Stephenson had to make his choice from the only kinds of wrought-iron bridges for large spans then known. There were the suspension-bridge, the compound trussed girder, the cast-iron arch, and the bowstring girder. The suspension-bridge had just been decided by Mr. Stephenson as unfit for railway purposes; he was probably afraid to trust to the compound girder—his experience told him, that with such a great height of pier, it would be unsafe to trust to cast-iron arches—so that there only remained the bowstring girder. It is possible that if he had designed this bridge rather later, he might have used the tubular girder, and he would have thus produced a cheaper, but as certainly an uglier, structure—similar, in fact, to those which now disgrace our metropolis. Each span is taken by four girders, the principal portion of each consisting of a cast-iron bow, the thrust of which is taken by a wrought-iron tie uniting the two ends together. The platform is above the top of the arches, while the roadway below is hung from them by means of wrought-iron suspension-rods. The entire width of the bridge is about 46 ft. The whole forms a very handsome as well as remarkable structure. It is stated that "designs were made for ornamental entrances to the bridge, in keeping with the decorative features of the structure; but the authorities of the railway and the town grudged the few hundreds of pounds necessary for their erection, and the work is left incomplete." A curious fact was noticed during the driving of the piles. "During flood tide the sand became so hard as to resist almost entirely the utmost efforts of driving; while at ebb it was quite loose, and in no way hindered the operation. It was found necessary to abandon the driving on many occasions during the entrance of the tide." Nasmyth's steam pile-driver was here used, and was found to be very useful. After a pile had been driven down as far as possible by the ordinary monkey, it was found that the steam-driver could send it down some 15 ft. deeper. It is also noticeable that the piles used for the coffer-dams were not drawn, but were cut off level with the bed of the river, so that the stumps could be left to protect the foundations. The iron-work was made by Messrs. Hawkes, Crawshay, & Co., but previously to its manufacture, Stephenson undertook the valuable series of experiments in cast-iron, which are printed in full detail in the Report of the Royal Commission on the Application of Iron to Railway Structures, 1849. The masonry amounts to 686,000 cubic feet, and the weight of the iron-work to 5,050 tons. The cost of the work was 243,000*l.*: this includes the cost of the temporary bridge of timber which was put up on account of the great importance of getting along the ravine as soon as possible.

The Victoria Bridge, the largest in the world, was opened a few months after the death of its designer. It carries the Grand Trunk Railway of Canada across the Saint Lawrence to near Montreal, thus effecting a communication between the interior and the sea, during the six months of the year that the Saint Lawrence is blocked up by ice. The Grand Trunk Railway thus

"Traverses British North America in one unbroken line for half the breadth of a continent; it connects and assists as together the several widely-delying dependencies of the British Crown; it affords throughout the year to the inhabitants of the wonderful valley through which it passes constant means of communication and transport which nature has denied them; it opens out the rich prairie country of the Far West; and it unites the whole of the great regions with the neighbouring territories of America, and with the great maritime pathway of the world."

The engineering difficulties in the erection of the Victoria Bridge were peculiar, and scarcely known in English practice. These were the extraordinary effects produced by the Canadian winters. As is remarked by Mr. Logan, in the proceedings of the Geological Society:—

"In consequence of the 'packing' and piling of the ice, as well as the accumulation of the moistened snow of the season, and the freezing of the whole into a solid body, sometimes more than 20 ft thick, the water suddenly rises, and lifting a wide expanse of the entire covering of the St. Lawrence, urges it forward with terrific violence, piling up the rended masses on the banks of the narrower parts of the river, to the height of 40 ft. or 50 ft."

The great problem thus consisted in making the numerous piers of the bridge in such a way, as while impeding the progress of the ice as little as possible, they should at the same time be able to resist the enormous efforts of such a mass in movement. In 1846, a citizen of Montreal, the Hon. John Young, pointed out the advantages of such a bridge, and surveys and soundings were taken by some of the Canadian railway companies. Some years afterwards, Mr. A. M. Ross, who formerly had charge of the masonry on the Conway Tubular Bridge, was engaged by the promoters of the Grand Trunk Railway Company as their engineer in Canada, and one of the principal subjects of inquiry was the crossing the St. Lawrence by a bridge. Mr. Ross suggested that the iron tubular beam principle would be applicable for the structure.

It was deemed desirable by the directors that Mr. Stephenson's opinion should be obtained, and Mr. Ross, on his return to England, laid before him all the information that had been collected. In 1853 Mr. Stephenson and Mr. Ross laid a design and joint report before the directors, and in September the contract was let for the bridge to Messrs. William Jackson, S. M. Peto, T. Brassey, and E. L. Betts, for 1,400,000*l.* At the site of the bridge the river is nearly a mile and three-quarters wide. The level of the river varies during the year; when it is covered with ice, it rises from 10 ft. to 15 ft. above summer level. The current runs with a speed of from seven to eight miles an hour. The bed of the river consists of slate rock, and large boulders were encountered at different portions, and had to be cleared away for the piers. The superstructure of the bridge intended for only one line of railway, consists of a simple iron tube from end to end, through which the trains pass. The most peculiar portion may be said to be the twenty-four piers, and a side elevation of one of these is given in the work.

"They are built of solid masonry, composed of heavy stones, from 5 tons to 20 tons each. They are founded with their footings resting on the solid rock, and are carried up, with the dimensions of about 90 ft. wide by 23 ft. thick, to within 6 ft. of summer water level, at which point the ice-breaking plane begins. This is a slope of masonry in the upside of the pier, inclining backwards at an angle of about 45 degrees with the horizontal, until it reaches a height of about 20 ft. above the highest or winter level of the river. The face of this slope is pointed, like a cutwater, and the masonry is formed of large solid stones worked perfectly smooth, and strongly bound together internally with iron cramps, to resist the enormous thrust upon them. When the large floes, or sheets of ice running down the river, come in contact with these massive constructions, they are turned upwards by the slopes, and, breaking down or toppling over by their own weight on each side of the cutwater ridges, they fall into the open spaces between the piers, and so pass harmlessly down the river."

Above the ice-slopes the piers are carried up to the tubes, and measure about 33 ft. by 16 ft. The two piers at the centre are of rather larger dimensions. The stone used in the piers is a hard grey limestone, and the quantity of masonry is in all about 2,713,000 cubic feet. A line of railway, of the 5-ft. 6-in. gauge used in Canada, is laid on longitudinal sleepers, and a footway, 4 ft. wide, is placed on one side, for the passage of the railway servants. The weight of the whole ironwork is 9,944 tons; more than 3,000 men were employed in the construction of the bridge; and upwards of 2,250,000 cubic feet of timber were used in the temporary works. The credit of the carrying out of the design,—a work of no small responsibility,—is due to Mr. Ross and to Mr. Hodges, the contractors' engineers. The work lasted longer than was expected, as the only available time for operations in the river itself was during the summer months. No temporary works could be left in the river during the ice season, so that the dams had to be so made that they could be readily floated again when the masonry within them was finished. Each caisson was 188 ft. long by 90 ft. wide; and the front part was made wedge-shape, to stem the current, the stern being made movable, to allow of its being taken away when the pier had been built. Some delay occurred in removing two of the dams before the formation of the ice, and they were thus carried away when the ice broke up. It was found that the works were likely to extend over several years, as the available time was scarcely six months, while the severity of the cold rendered sixteen weeks the whole working season for carrying out the masonry of the bridge. In order, however, to carry on the masonry work during the winter, a very ingenious plan was adopted, which had been previously carried out at St. Anne's Bridge, over the river Ottawa.

"Strips of asphalted felt, about 3 in. in width, were laid along the whole of the front of the masonry, at such a distance from the edge that the work might be effectually pointed. On each side of the cross-joints similar strips were placed, as likewise at the back of the stones. As soon as one course of ashlar was laid, it was dressed perfectly fair on the bed to a straight edge, for the reception of another course, which was superimposed in a similar manner, the backing being laid dry, and packed as closely as possible; then spaces or flues were left, about 1 ft. square, throughout the whole height of the pier. The work was completed in this manner during the winter, and as soon as the weather permitted, and the frost was fairly out of the stone, the piers were carefully pointed, and the whole of the interior well grouted from the flues. The whole thus became one solid mass, the clear water which filtered through the joints showing very accurately the progress of the grouting."

This admirably skilful plan is said to have greatly hastened the completion of the works. At last the bridge was opened, on August 25th 1860, by the Prince of Wales, who visited Canada for the purpose. It is to be hoped that this most extraordinary bridge will remain for centuries what it is now—a great monument to the engineering science of Mr. Robert Stephenson, and to the skill and energy of those who carried out the design. There is little to complain of in this very valuable and honest book, but, as is generally the case with biographers, they seem incapable of doing justice to any one connected with their hero. The *lues Boswelliana* seems to be as universal and unavoidable a malady as the measles are with children. In this way, we do not think that quite sufficient justice has been done in this narrative to Mr. Ross, who had such a large share in the undertaking, from its beginning to its practical achievement.

Such is the brief recital of the more prominent of the more glorious of the works of a man of whom England has indeed a right to be proud. Would that all would imitate his kindly, generous disposition, though Robert Stephenson's power of intellect might be unattainable by imitation. It is melancholy to think that this man, the most successful engineer of the age, was yet unhappy a good portion of his later life, through the death of his childless wife. The prominent feature in Robert Stephenson's professional character was undoubtedly his caution. His prudence and foresight, as is very often remarked by his present biographers, much conduced, in the great situations of trust in which he was placed, to his personal success in professional life, and to the success of his individual undertakings. He seems never to have trusted to chance,—never to have hoped for things that might turn up, but were not certain of doing so; he always, like a good general, left himself a way for retreat, and kept himself prepared for all contingencies. Here we have perhaps an instance of what may be termed the influence of disposition, of tendency, on the intellect. Robert Stephenson seems to have been deficient in hopefulness. This tendency, while it kept him from the brilliant blunders of Brunel, also seems to have followed him into private life. After being absolutely satiated with the world's honours,—while being held by all men as the foremost engineer in the world, this great man, great in both intellect and heart, seems to have given way to hypochondriacal despondency. Perhaps a more buoyant disposition, a more hopeful temperament, would have diminished his success as an engineer, but would have made him happier as a man. A most important portion of this book consists in a number of reports, written and signed by Robert Stephenson himself, on such momentous questions as the atmospheric system of railways; the broad and narrow ganges, and on different engineering undertakings that he carried out. They are all written in an admirable style, well suited to the subjects and to the writer—"*le style c'est l'homme*."

We feel no hesitation in saying that this is not merely the best life of Stephenson, but also the best engineering biography which has yet appeared. It is a thoroughly honest and complete book, entirely free from the errors in matters of theoretical and practical science which are so distressing to a professional reader. The life of an engineer can only be written by an engineer, and the professional aid of Mr Pole, given to Mr. Cordy Jeaffreson, fulfils this requirement.

Exhibition of Water-Colour Sketches.—The third Winter Exhibition of Sketches and Studies opened by the Society of Painters in Water-Colour, in their gallery, Pall Mall East, consists of 458 works, and includes specimens by nearly all their members. We must endeavour to return to it.

THE NATION'S PROGRESS IN SCIENCE.

ONE of the most curious trains of thought we can follow is that which leads us back into the early days of the world. It seems paradoxical that the men who lived on the earth's surface thousands of years ago, should not have known so much of the nature of the orb as we who people it at this late period; and that the generations of men who will succeed us, will probably obtain much more definite information than we possess: in other words, that those beings most removed from the period of the formation of the world should be better acquainted with the various facts attending the marvellous work than those who first trod the virgin soil. And that, not only were the early peoples—the men of the ages of stone, bronze, and iron—ignorant of the nature of their vast habitation, but, as time passed on and civilization became developed out of a concretion, as it were, of human sympathies, desires, and aspirations, erroneous theories were built up and accepted by mankind as facts. And it is only in the slow course of centuries that errors are discarded and truths discovered. There has been, too, until recent times, an unaccountable reluctance to receive scientific truths, which circumstance adds another perplexity to the puzzle. The first man who informed his fellow creatures that the earth possessed a diurnal motion, was cast into prison, and kept there till he signed a recantation, declaring that such a propositon was absurd and philosophically false. Many fabulous animals were supposed to exist upon the earth, even by learned men, as late as the seventeenth century, who, at the same time, would not credit the existence of some of the creatures to be seen at the present day in the Zoological Gardens. And, still later, the antagonism with which Dr. Jenner's announcement of the value of vaccination was received, is another familar instance of the old disinclination to welcome scientific truths. But this feeling has been superseded by a wistful, earnest desire to study the wondrous works of the Creator, and read as many pages as we may of Nature's book,—a book that is spread open, it is true, but written in characters many of which are yet unintelligible. The contents of this ponderous tome are, however, too varied to be mastered by any one man. Those most competent to read any part of it know that it is only by confining themselves to one especial department that they may decipher it. Thus it has come to pass that the most distinguished scientific scholars are those who have made a minute subdivision of a chapter the study of a life. A *savant* who has mastered the reading of one page has it in his power to convey the knowledge he has acquired to others, as well as to receive the yield of other men's labours in equally limited spheres. In this way, although the field in which each individual works is small, the general gain is great. A most important influence for the furtherance of science is the organization of associations for its advancement. There was nothing like this in old times. A solitary scholar here and there shone out in the dark centuries of the past as a lighthouse in the sea of time, and the waves of popular indignation or applause beat about his feet according to the measure of favour with which his readings were received. Now there are countless scholars, countless watchers of the heavens, countless dredgers of the deep, countless probers of the crust of the earth, countless gatherers of every herb yielding seed, and their custom is to meet on set occasions at stated places and relate accounts of the additions they have made to the stores of human knowledge. It is not every one, however, who has leisure or other opportunity to attend these various meetings; consequently a large proportion of the human race remains unaware of discoveries that render a history of the world as full of novelties as a tale untold.

The nation's progress in science lays down the proposition that the world we live in is a far more wonderful place than fairy land ever was to us. Indeed, the more facts that are ascertained concerning our habitation, the more wonderful it appears; and the more we think of it, or any part of it, the more must we be impressed with the grandeur and majesty of the system in which it is an item. Looking back from the standing point afforded us by modern discoveries into the coiled up centuries that form the dim past, known as "in the beginning," we learn that the earth was once a ball of molten matter of intense heat revolving on an axis in an orbit round the sun. Some minds speculating on the origin of this ball of fiery matter have deemed it possible that the earth and planets are concretions of nebular matter of which the sun was the nucleus; and certain spectrum experiments made by Bunsen and Kirchhoff certainly favour this view, as they show that the sun is in reality composed of materials, some of which are identical with those of our globe. We will, however, confine ourselves to the modern reading of the history of the earth, reserving discoveries relating to the sun for future mention. The ball of heated molten matter revolving in space was also, at the period of our earliest knowledge of it, gradually cooling and hardening. It is tolerably clear that a thick veil of steam must have surrounded this cooling body in its ceaseless round, which, condensing as the heat lessened, settled upon the surface of the crust of the earth in the form of water. This union of water with the scoriaceous covering of the earth commenced the process by which the lowest stratified rocks were formed. A diligent search amongst these primitive formations has failed to show that life existed at this period; but, in the next stage of the world's history, deposits were made at the bottoms of the early seas which formed the assemblage of strata known as the Silurian system, in which are found the remains of myriads of marine creatures and seaweed like plants. The upper strata of this system contain the remains or scaly coats of fishes. The carboniferous strata yield us evidence that insects and reptiles next disported on the face of the globe, fostered and fed by a luxurious and gigantic vegetation. This era in the history of the world is called the Palæozoic, or that of antique life. In the next great period of time the earth was inhabited by enormous animals, that were of similar forms to our toads and lizards: the seas, by monsters that were half fish and half reptiles, now called saurians; and the air by enormous winged creatures, also bearing a resemblance to our lizards, called pterodactyls. This is referred to by geologists as the secondary period. In the tertiary period the highest forms of life tenanted the earth, and many of the creatures that belonged to the secondary period were extinct. Elephants, rhinoceroses, mastodons, and other huge creatures of the same colossal proportions, roamed in almost interminable forests; and the ox, horse, and deer have also left evidences of their existence in these remote ages. After the earth had thus slowly passed from stage to stage, and its surface had been inhabited by races of organic beings that were successively supplanted by others in the order in which the conditions required for their existence were superseded, man was created. Modern science has calculated the weight of this orb to be about 6,049,836 billions of tons; the diameter to be about 8,000 miles; and the thickness of the crust formed on the still globular mass of molten matter to be about 34 miles. A subdivision of this branch of modern study and research proves that the earth's surface has undergone considerable physical changes since it became the habitation of man. The presence of the remains of the hippopotamus in districts where not a ripple of water is now to be found; of elephants and rhinoceroses in places where the present climate would render their existence insupportable; the upheaval of land, beaches, and sea-bottoms; the receding of some waters, the encroachments of others, are some of the facts bearing upon this subject that have been noted by observers. It has also been ascertained that alterations in the physical geography of the surface of the globe have by no means ceased, but are still imperceptibly taking place.

Recent discoveries inform us that the earliest human beings inhabiting this shifting scene were rude savages. The remoteness of the era when man first appears upon Nature's stage may be best realized when we consider that the mammoth, extinct species of the elephant, rhinoceros, hippopotamus, and reindeer inhabited Europe contemporaneously with him. His tools and implements were all made of one material, stone: his food consisted almost entirely of game. After a long lapse of time, perhaps of centuries, although stone continued to be the materials of the weapons and tools of these early people, their food began to comprise tame animals, and ultimately cereals were added to their fare. Explorations have been made, on the coast lines of Denmark, in the great heaps of refuse, or Kjokkenmödding, left by people of this period, which show that they also, in these situations, ate oysters, periwinkles, mussels, and cockles. Next we come to archæological evidence that they built themselves homes. Some seventy submerged villages have been counted in the midst of the Swiss lakes, composed of groups of huts built on piles, as many as three hundred huts being comprised in one settlement; no less than forty-six examples of similar, though not identical islands, have been observed in Irish lakes; and within the last few months further examples have been found in Scotland. Bones, hammers, axes, celts, hatchets of serpentine, arrow heads of quartz, fragments of rude pottery fashioned by hand, masses of charred wood, lumps of carbonized wheat, apples, and pears, the stones of wild plums, the seeds of berries, and hazel and beech nuts have been dredged from the Swiss lake dwellings. The bones have been traced to fifty-four species of beasts, birds, and fishes: twenty-four species of wild mammalia, eighteen species of birds, nine of fishes, three of reptiles, and the dog, horse, ass, pig, goat, sheep, and several bovine races. That most of these were used for food is surmised from the circumstance that all the bones that contained marrow were split open. Some of the Swiss villages contain tokens of having been inhabited in the bronze age, or period when a mixture of copper and tin was used for weapons and tools. The Irish lake dwellings yielded evidence of the possession of oxen, swine, deer, goats, sheep, dogs, foxes, horses, and asses, by their ancient occupiers. One hut, found 14 ft. below the surface of Drumkellin bog, in Donegal, measured 12 ft. square and 9 ft. high. It contained, when explored, two stories of 4 ft. only in height. The planking presented the appearance of having been split, with great effort, with stone wedges. One of these implements, a celt, a piece of leathern sandal, and a flint arrowhead, were found in this hut. The exact date of man's first appearance and the question of the quality of the intellectual powers possessed by him at that time are subjects which the scientific world is still discussing. To have ascertained that he was contemporary with the mammoth is a step towards the disentanglement of the first question; and the collection and examination of the remains found in future discoveries will, doubtless, throw more light than is now shed on the latter. The evidence yielded by the examination of those skulls already found is by no means sufficient to be conclusive, though, as indicative of the direction in which the results tend, we may repeat that Professor Huxley exclaimed, on viewing the fossilized cranium of a human skeleton found in a cave in the valley of the Dussell, that it was the most ape-like skull that he had ever beheld. So far as we have gone, modern science pictures our early predecessors as low, thick-set, strong-boned people, with protruding brows and receding foreheads. Ten years ago we could not speak thus advisedly. Another period of ten years may reveal the existence of other depositories whose contents will afford more exact information. Before returning from these dim ages into the modern present we may mention, for the behoof of those of our readers who may hereafter be entrusted with works likely to lay bare such places, that several caves have been found in this country and in Wales containing enormous quantities of the bones of extinct animals and of creatures which no longer inhabit these islands. Most of these caves have fissures connected with the surface through which the bones are supposed to have been washed thousands of years ago. The fissures have become choked, and thus the deposits have been, as it were, sealed up. In the ossiferous loam filling a fissure connected with Bosco's Den, in the Gower caves, in Glamorganshire, the antlers of a thousand rein-deer were extracted and nearly as many more appeared to be left behind. These had all been washed into the rent with the bones of the cave-bear, wolf, fox, ox, stag, and field-mouse, and lay in an envelope of ochreous mud. In a cavern, called Longpole, the remains of two species of rhinoceros were found, below which lay two rude flint knives. Sir Charles Lyell quotes the finding of fossil remains in the basin of the Thames at Gray's Thurrock, at Copford in Essex, at Maidenhead, at a spot near Bromley, in the valley of the Avon, at Pease Marsh, in Suffolk, in Somersetshire, in Wiltshire, in Bedfordshire, and in several other counties.

Of the sun, modern science has ascertained many new startling facts. The dark places on its disk, that we familiarly call "spots," are deep chasms in matter that, as we have seen, is found to be of a similar nature to that of which our globe is composed. The world is indebted to Mr. Nasmyth for a still more startling dis-

covery. This gentleman was the first to observe that the bright surface of the sun is composed of an aggregation of apparently solid forms, each some thousand miles long and hundred miles broad, which interlace each other in every direction. These extraordinary and hitherto undreamt-of bodies, crowding round the sun like a cloud of moths round a candle, are of a long narrow pointed form, similar to that of a willow-leaf, and are so regular as to lead to the inference that they are organisms which may even partake of the nature of life. They are observed to line the sides of some of the chasms, and to form a sort of bridge across others. As some aid to realize the vastness of the field on which these objects are seen, we may give the rough calculation that the circumference of the sun is about twice that of the circle described by the moon around the earth; whilst to convey a sense of the awful immensity in which the sun moves, we may add that its diameter is but a three-thousandth part that of the outermost planetary orbit; and that, in company with our globe and the whole solar system, it revolves round another stellar centre, now believed to be situate in the constellation we call the Pleiades; —and, leaving certainty for probability, that savans are disposed to admit that this second sun may be but an item in a still vaster and more distant system. Professor Secchi, of Rome, has ascertained that the heat of the sun is greater at its equator than at its poles. Before we turn from the sun, we must refer to the important prediction made by Sir William Armstrong. He points to the sun as the successor of coal for working our manufacturing machinery. The Falls of Niagara, he indicates, would provide power enough to set in motion all the machinery employed in all the manufacturing processes in the world; and falling waters, raised to the necessary height by the heat of the sun, will be one of the resources future ages will develop for this purpose. Photographs of this luminary have been taken every day that the weather has permitted, for many months, in a room constructed for the purposes of astronomical photography at Kew, by an instrument named the photoheliograph. Not less out of our every-day life, and to the credit of modern science, are the wonderful catalogues of fixed stars made by the Astronomer Royal; or the long lists of luminous meteors made up annually by Messrs. Glaisher, Greg, Brayley, and Herschel; or the calculations that instruct us to look for showers of those erratic strangers travelling through space at the rate of 17 miles a second, shooting stars, on the 10th of August and other given days.

Professor Phillips, Dr. Lee, and Mr. Birt, have made us so familiar with the geography of the moon that it seems, in a fanciful way, only a question of time before a committee of *savans* be deputed to visit and explore it. They have measured the vast plains, surveyed the chains of mountains, named every isolated peak, noted the craters, the valleys, terraces, rocky ridges, and other variations on its surface, as minutely as though the body were one of our colonies. Enormous plains, one of which they have computed to measure 61 German miles long, stretch away till they are fringed with rocky promontories or checked by precipitous mountain ranges. Craters abound in every direction. Some of the smaller mountains resemble cups set in saucers: others consist of dispersed cups. In the centre of some of the larger mountains, as in those named Copernicus, and Gassendi, are masses of broken rocky country, about 6,000 ft. high, having buttresses which die away in collateral ridges. In another large mountain, named Theophilus, the centre is formed of a conical mass of rocks, 15 miles in diameter, full of enormous clefts, which are bright and shining. The whole aspect of the moon is expressive of volcanic action on a grander scale than that which has prevailed on our globe. A continental *savant*, Benzenberg, argues that shooting stars migrate from the moon.

The ascents of Mr. Glaisher in Mr. Coxwell's balloon must not be passed over in a summary of scientific endeavours. The most enriching result of his efforts to the popular mind is the certainty he has proved that our bodies are not adapted for any other sphere than that on which they are placed: to exist under other conditions we must put off our earthly garment. The scientific experiments tend to negative the conclusions formerly arrived at respecting the decrease of temperature with elevation, and to show that rain is only precipitated when cloud exists in a double layer.

The systematical forecasting of the weather by Admiral Fitzroy, and the telegraphic warnings sent to the various ports, is another most useful and marvellous feature of the day. The system, we perceive, has been adopted in France and Holland.

Modern chemists have conferred several boons, on mankind. They have given the world two new metals—aluminium and thallium; a new alloy, formed of a variety of brass, containing a small quantity of iron, combining tenacity with elasticity to a remarkable degree; new dyes from aniline, a refuse material, that only a short time ago was of no account; new disinfectants, &c.; and have applied a new principle to furnaces. The regenerative furnace of Mr. Siemens is looked upon as an agent likely to revolutionize many a chemical art, from its power of attaining a temperature beyond that of other furnaces, with a greater economy of fuel. Chemists, too, have gone into the great question of utilization of our sewage. Baron Liebig has recommended that the liquid portion of the manure should be mixed with superphosphate of lime, before distribution by pipes over fields, as a process likely to increase the value of the constituents in it. Many an experiment, however, must be made before the key to this question, involving an annual gain of millions of pounds sterling to the metropolis alone, be it remembered, is found.

Sanitary science has grown of late years. A wholesome conviction has come to men's minds that many diseases are preventible; and instead of a blind acceptance of epidemics as misfortunes to which we ought to bow without repining, it is agreed that it is more imperative upon us to prevent the ravages of the slayer, by cutting off all chances of his approach. This has led to anxious consideration of the numerous causes that affect the public health, and given rise to marked improvements of many kinds in many places. Various appliances have been elaborated which formerly were scarcely considered, such as tubing for drains, traps, ventilators, contrivances for the prevention of damp and cold in houses, for warming houses, churches, for cooking, for washing, for scavenage, &c. There is still, however, much to be done in this way. The perfecting of gas-fittings, for instance, is a case in point, as it is allowed that a leakage of a tenth of the whole quantity of gas consumed takes place, as a matter of course, and every person who has passed a cutting in a street must have observed the extent to which gas has permeated the soil. And overcrowding, the greatest of all sanitary grievances, has yet to be dealt with.

Tracing civilization from the days when "the earth was filled with violence," to those when she took up science and art in Greece and the power of framing and administering law in Rome, from the days of the canoe to those of our iron-clad frigates, from the days of the hut-building on piles in lakes to those of crystal palaces, we cannot but be stimulated to fresh exertions. The difference in the aspect of our commercial and social relations since the perfection of our railway system, telegraphic communication, and steamboat service, is familiar to all. The inventions in instruments for scientific purposes are as wonderful a proof of our progress as any that we could name; although, perhaps, certain discoveries, such as the dynamical theory of heat with its bearing on the science of gunnery, are still more fraught with power. The theory of the Messrs. Hawthorn, that the railway service may be performed by stationary engines may be worked out before we are many months older, and the laying of the Atlantic submarine telegraph is a task that will not be left uncompleted. Meanwhile, our every-day building occupations will be all the more interesting when we consider the part the various materials have played in the early history of the world.

Proposed Extension of the General Post-Office in St. Martin's-le-Grand.—The application to Parliament, signed by the solicitor to the Post-office, for increased accommodation to that establishment, comprises the appropriation of the whole of the western side of St. Martin's-le-Grand, up to the Nottingham Castle, in Angel-street, to Bath-street on the west and Newgate-street on the south; besides providing for a direct underground communication underneath the main thoroughfare. It is said to be the intention of the Treasury, when the bill is passed, to erect upon part of the site a new Post-office Savings Bank. Notices are being given to the owners of the premises required.

THE CHARING-CROSS HOTEL.

If the amount of public interest which particular buildings excite, were the measure of their merit, and of their due position in the architectural movement of our time, then a high place should be allowed to several of the works that are at present in progress in London. Amongst these would be found the structure now conspicuous in the West Strand, which forms the front of the railway station that has displaced Hungerford Market and many surrounding houses. The excitement of the interest, at least in the case of any building possessing real merit, must be considered as fortunate and favourable for the future of architecture. It is something gained when the common passenger is arrested in his route along one of the busy thoroughfares of this metropolis, and by a work which is not remarkable, as in detail, for mere eccentricities, or in general character and style, for contradiction and anachronism with the buildings near it and the world about it. In the Charing-cross Hotel and Railway Booking-offices, Mr. E. M. Barry, aided by some of the circumstances of the site, has certainly succeeded in one of the aims of a good architect, which we have alluded to above and have referred to often before. He has produced a structure which seizes the attention at once, and not by means that are within the hand of every one without being architect, who has the whim to be pointed at, but by appliances and qualities that are those of buildings such as are appreciated permanently. It is true that he has not carried into every detail of his work, the skill that he has exhibited in general mass, grouping, and sky-line; but in the interests of architecture, both as the art, and as the profession commissioned by the public, we thank him for what he has done.

The Charing-cross Hotel has a two-fold importance in the architectural movement, just now, which we have been inclined to recognise as in progress. It has importance as an example of its particular class of building; as, in the art, it has that which we have alluded to.

It is a curious fact that we, and architects generally, are discussing the first principles of disposition in planning, of certain different classes of buildings that might seem to have been required often before the present day; but which, the principles, along with the details of plan to be provided, somehow have never yet been clearly set forth in treatise or example. Of course, every fresh structure should be expected to be an advance, as well in capability for serving the purpose for which it was planned, as in its art; moreover, wants are changing and progressive: but there are certain requirements that are the same from century to century,—whether in the church, the theatre, the hospital, the picture-gallery or museum, the labourer's cottage, or the stable; and many of these are only now being inquired into by the profession, sometimes with the aid, and sometimes the opposition, of the public, or of those supposed to be acquainted with the special wants. The truth is that till very recently, objects were not served by buildings planned for them,—or since the time when the objects were not multifarious as at present, and were provided for not inadequately in the broad distinctions, as between the church, the monastery, the college, the guild-hall, the *hospice*, the castle, the town-house, and so forth; wherein, though the distinctive characteristics are not confined to decorative features, there is not the recognition of the great variety of wants observed now, both in the entire structures, and in details of plan of each kind of building.

Within the last few years, the want of well-planned, as also well-managed, hotels for travellers, has been loudly complained of; and it has been perceived that the good management, in a large building,—as "on the American system," or where the conveniences may be the greatest, most time-saving, and therefore best adapted for the day,—requires the special and the good planning. The modern hotel thus, is a new class of building; and the principles in planning it, along with the details of accommodation, deserve our attention when an opportunity of examining any actual work occurs.

With the increase of size of the building, which allows of advantages that have been alluded to, certain difficulties or new requirements arise, as those of lighting the corridors without loss of space, of ascent to the upper floors, and of general *service* and communication. In nearly all planning for buildings to contain many comparatively small rooms that have to be well

lighted, difficulty of lighting the corridors is experienced; and the result is generally a compromise. In the Hôtel du Louvre, Paris, the corridors are much too dark, although there are large reflectors. One of the objections to a dark corridor in an hotel is the difficulty of distinguishing numbers on the doors. To prevent this objection in the Charing-cross Hotel, Mr. Barry has placed in the top of each door an oblong glazed panel, with the number or the other designation of the room painted on the glass; which material of course is ground, or not what can be seen through. The glazed panels help to light the corridor. For the ascent of persons, there is, as in the Grosvenor Hotel and other hotels, an "ascending-room," worked by water-pressure. There is a lift close to it, similarly worked, for luggage; and there are numerous other lifts, of the common kind, distributed about the building. The landings of the *service*-staircase are kept 18 in. clear of the wall at the end of the space on plan which the staircase occupies; so that there is in effect, there, a shaft of 7 ft. 6 in. by 18 in. on plan, which besides assisting ventilation at all times, would be of great use should materials for repairs be required to be raised. There is a somewhat similar shaft between the windows of the water-closets and the external wall of the building; and there is a large ventilating-shaft at the end of each corridor. There are, of course, the usual arrangements of speaking-tubes; and the bell-wires are carefully placed to be got at easily when required to be repaired. On each floor there is a serving-room, with lifts; and there is a shaft for dust, with double doors and opening arranged so that the dust does not fall down the actual shaft to the basement, till the door in the room has been closed. and so that, should this door be left open, dust descending from any of the floors above, would not find its way into the room. There will be a coal-bunker on each floor, near the principal lift, to contain 2 tons, and which may be replenished every morning. A cistern, at the top of the building, will contain 17,000 gallons of water; one in the basement will hold 10,000 gallons; and there will be twelve other cisterns for various purposes.

The general plan of the hotel includes a refreshment-room (or rather a *buffet* and restaurant, with distinct entrances) in connexion with the railway-station platform, and having its own kitchen; an end-entrance to the hotel from the Strand fore-court and Villiers street, and one at the side from the railway-station platform; a coffee-room, 48 ft. square, including recesses, and about 24 ft. in height between the beams or divisions of the decorated ceiling; a ladies' coffee-room, 28 ft. by 16 ft.; a reading-room, 30 ft. square; a board-room, 27 ft. 3 in. by 16 ft., which can be used for reception of distinguished personages, being opposite the entrance from the station; a "tap"; a meeting-room, 57 ft. 6 in. by 22 ft. 11 in.; a smoking-room, 26 ft. by 22 ft. 11 in., having lobbies at each end, and a balcony for the whole length, looking out into the station; a room the same size as the smoking-room, which may be used as a billiard-room; a committee-room, 34 ft. 10½ in. by 23 ft. 9 in., and numerous suites, as well as separate bedrooms. The beds number about 214; and there are, besides, 43 dressing-rooms, some of which might be made to contain beds. There are 17 sitting-rooms. The principal suites are provided with dressing-room, water-closet, and entrance-lobby; and the door from the corridor will have a bell. There are 8 bath-rooms in the building, and 52 water-closets. There are five stories above the ground-line, in the centre of the Strand front, not counting two stories which there are in the roof; and there are twelve bays in that part. There are six of the ordinary stories of windows in the pavilions, in the same front; whilst there are four stories in the roofs of these pavilions. One of the stories is a mezzanine, the coffee-room, reading-room, and some other rooms being lofty. There is also a mezzanine, which does not appear in the Strand front, to part of the general ground-floor. One of the upper stories was an addition to the design, after the building had been far advanced. By this, there were gained 39 bedrooms, 8 dressing-rooms, and 3 sitting-rooms. There are three stories below the Strand level; but, as the ground descends southward, these have many well-lighted rooms. At the south end, there are seven perfectly lighted stories above the ground-level; there is one story below, or in the basement; and there is what might be called yet another regular story, though in part lighted by dormers in the roof, and besides the top attics. The kitchen is here wholly above ground, directly under the station refreshment-room, and the hotel coffee-room, to which, or to the attached serving-rooms, there is communication by lifts. The ground story is 21 ft. in height; the principal floor is 16 ft., and the mezzanine is 10 ft. 6 in.; the floor next above is 13 ft. 6 in.; and the other floors are 10 ft. 6 in. each,—the dimensions being stated from floor-line to floor-line.

Having given some idea of the accommodation provided in the building, we may now describe more particularly the manner in which the plan is arranged, and the building is constructed and decorated. And here, before speaking of the relative positions of the rooms, it should be understood what were the conditions imposed by the ground, and by the space occupied by offices and waiting-rooms in connexion with the railway. The land available for the hotel, and exclusive of the fore-court space, formed two sides of a square, or was in the shape of the letter ⌊; the side next the Strand being very nearly 227 ft. The ground at right angles to this, follows the line of Villiers-street, and is 190 ft. 4 in. in length, not including the eastern porch of the hotel, or the railing which bounds the end of the fore-court. But in the Strand front, the whole of the ground-floor was required for the booking-offices, waiting-rooms, and other appurtenances of the terminus, excepting what might be needed for entrance merely to the hotel: thus the Strand front was, or is now, composed of two pavilions and a recessed centre, each pavilion having a porch of its entire width, projecting from the lower story, and the centre having a glazed pent-roof to the footway, —the porch to the east belonging to the entrance to the hotel: but before the drawings could be matured, the requirements of the railway company entailed another encroachment to the disadvantage of the hotel; for, a portion amounting to 14 ft. 2 in. of the width of the Greenwich Booking-office, which is part of the recessed centre as appearing in elevation, is really taken out of the width of the Villiers-street ground; that is to say, the latter is of the full width, or depth from Villiers-street, only from the commencement of the roof of the station, to the end of the ground southward. The position of the booking-offices and terminus quite interfered with the proper lighting of the three stories of basement in the Strand front; and it will interfere with their ventilation, excepting what may be got from gratings in the platform of the station. As to the west side of the Villiers-street building, or east side of the station, some openings have been obtained; and on the street side, the basement is well lighted as before mentioned. Moreover, as to the Strand line, and the Villiers-street line, the building might have had to be lighted in part from space underneath a station-roof, as the Grosvenor Hotel is at the Victoria Station, an arrangement to be avoided so far as possible, considering noise of trains and the steam from engines, and that ventilation can be scarcely equal to requirements. The position of the ground for the hotel with reference to the station, eventually led Mr. Barry to decide to leave space between the Strand building, in the upper stories, and the north end of the station-roof, or above the roofs of the meeting-room, smoking-room, and billiard-room. Another way in which the plan suffered was in that there could be no staircase in the Strand front, starting from the ground floor. There is one there, from the first-floor; but it is reached from another staircase at a considerable distance, that is, one in the middle of the Villiers-street line, which is the grand staircase of the building.

The front of the building to the Strand is not parallel with the street. The deviation from rectangularity of the forecourt is concealed in great measure by the Cross in the centre; and the obliquity of line of the front is rather advantageous to the effect from the Strand and Duncannon-street. The length of the line, which includes the entrances from the Strand, two lodges, and the iron railing and stone piers, is 238 ft. 4 in.; that of the Villiers-street end of the forecourt is 95 ft. 1½ in., including the projection of the porch of the hotel, 13 ft., inside dimension; whilst the length of the western line is about 134 feet. The Cross occupies a space in the centre of the forecourt, which has a breadth or diameter of the octagon of 21 ft., including the steps; but with the footway, connected with the steps, the dimension will be about 35 ft.

The porch of the hotel, which projects from the eastern pavilion of the Strand front, corresponds with that which there is to the pavilion at the west, where the exit-way for cabs and omnibuses from the arrival-platform of the station is, excepting that to the former porch, there is a side-flight of steps from Villiers-street, or additional to the approach from the fore-court. Each porch is lighted at the top, through rough plate-glass.

A wide doorway, which has a small porter's room on each side, in what may be called the reveals, leads directly from the porch of the hotel, into a square entrance-hall. Exactly facing the entrance, is a niche in a broad pier which separates the bar-window, on the left, from the entrance to the main corridor on the right. This corridor continues southward, or in a line parallel with Villiers-street and the longitudinal axis of the station, past the manager's rooms, and past the grand staircase on the one side, and the board-room on the other, and past the service stairs and "ascending-room," straight to an entrance to the railway refreshment-room. In the course of the length of this corridor, it is joined by the entrance-way to the hotel from the railway-platform, as well as by a separate entrance which there is for the passengers' luggage, near the "ascending-room." Adding the refreshment-room, the length of the line would be about 184 ft.; though, as will have been understood, the axis of the corridor is somewhat to the right of that of the main entrance and entrance-hall, owing to the encroachment of the railway booking-offices.

The breadth of each pavilion on the Strand side is 39 ft. from outside to outside, the recessed centre of the front being 148 ft. 11½ in. The penthouse-covering to the footway, between the porches, projects about 15 ft. from the building. The centre of the Villiers-street front, or for a length of 87 ft. 10 in., is recessed as much as 5 ft., so as to allow an ample area for lighting the basement; and the two angles of the pavilions enclosing this recess,—whereof one pavilion is that of the Strand front, and the other terminates the plan southward, and contains the kitchen, refreshment-room, and coffee-room as before described,—are treated correspondingly with one another, but differently from the angles in the Strand front. The latter are 5 ft. 6 in. on the face, in the lower story, and are terminated by square tabernacle-stages, and zinc-covered spirelets; whilst those to the Villiers-street recess are 14 ft., and are carried up as square towers, with belvideres above the general cornice-line of the pavilions, and terminated each by a lofty pyramidal capping, the general rectangular space on plan of the pavilion being covered by its own high Mansard and flat-topped roof, hipped at the ends north and south. We have mentioned that there is a mezzanine to parts of the ground-floor of the Villiers-street building. The board-room, in the centre of the front on that side, the refreshment-room, however, and perhaps the hall, are carried up to the full height; though to the refreshment-room at least, there is an upper range of lights, or ventilation-openings, above the long windows. The arrangement of this mezzanine may, however, be understood on looking at that of the windows of the board-room, in the centre of the front, and the mezzanine windows on each side. The third story of the building, counting from the ground line of the Strand front, is also a mezzanine; but it takes that character throughout the elevations, the coffee-room and reading-room being lighted by two stories of windows; and the actual height of those rooms not being distinguishable in the elevations from the arrangement of the story and mezzanine corresponding. A balcony, projecting on very bold stone cantilevers, for rooms of the first-floor, is a feature of the recess of the Villiers-street front; and the three windows of each story of each front of the pavilions are grouped together, and deeply recessed with columns and balustrades.

The ground story of the Strand building contains the Greenwich Booking-office, and westward of it, a 10 ft. passage-way for luggage; the North Kent Booking-office, and first and second class waiting-rooms; a Main Line Booking-office, smaller than the preceding; a passage-way, 10 ft. 3 in., for luggage; a cloak-room, of about the same width, —which, though the length is 59 ft., would seem inadequate, the exhibit-way, 11 ft. 7 in.; and the parcels' office, and a superintendent's room. The waiting-rooms and booking-offices seem well arranged, and ample in area, as for the whole line traffic. The Greenwich Booking-office includes two sets of ticket-taking

places and ways through to the departure-platform.

The range of booking-offices and waiting-rooms, or between the pavilions, is divided, parallelwise with the line of front, into two unequal parts, by a wall, of 3 ft. 1½ in., which is only pierced with arches for the communication between two rooms, or two parts in the length of a booking-office, or to make the passage-way. This division becomes the actual external wall, south, of the Strand building, where above the smoking-room and other rooms before mentioned of the first-floor: in other words, there is here vacant space between the upper stories of the hotel building, and the end of the station-roof. The space in the first-floor however, is filled by the meeting-room, smoking-room, and billiard-room, with various adjuncts; and each of these rooms is lighted or ventilated through the ceiling, as well as by the windows which look out into the station under the roof of the latter.

Fortunately, light was obtainable to the western end of the corridor of the Strand building; and there is a well-hole for light, at the angle of meeting of the corridors of the two blocks or parts of the entire structure. The first-floor corridor of the Villiers-street building runs direct from the reading-room, which is in the north-east pavilion, to the coffee-room which is in the south-eastern, passing by the principal staircase, the serving-staircase and rooms, and the "ascending-room," similarly to the corridor below; and it is 9 ft. in width.

In another article we shall speak of the decorative features of the building, and may add to our particulars of the construction.

PARIS.

The river Seine is to receive six new weirs, so as to maintain the depth of water between Paris and Rouen at a minimum depth of 2 *mètres* (6 ft. 6⅝ in.), and an inquiry for the purpose has been opened at the Hôtel de Ville, in Paris.

The following is the estimate of the works:—

1st level, between the Andresy lock and that of Meulan	£30,000
2nd, between Meulan lock and the proposed one at Bonnière	57,040
3rd, from Bonnière lock to that of Notre Dame de la Garenne	18,520
4th, from Notre Dame de la Garenne to the lock des Poses	49,640
5th, from the Les Poses lock to that of Martot	5,200
6th, from Martot lock to the Railway Bridge at Rouen	180,000
Total	£340,400

During the past summer considerable alterations have taken place in the Hospice Cochin in the Rue St. Jacques, facing the Observatory. New additional buildings have been erected near the Rue Mechin, on land belonging to the hospital, containing several lying-in wards. These are only to serve alternatively,—that is to say, that one of them will always be left unoccupied, for a certain length of time, to avoid the spread of puerperal fevers.

At the village of Ivry a new hospital for incurables is about to be constructed on hospital lands extending over 43½ acres, and will replace that establishment which is now lodged temporarily at the Caserne Popincourt. It is also proposed to erect at a later period at Ivry a similar hospital for the accommodation of females, to be substituted for the establishment now in the Rue de Sèvres. These two establishments are to be *de facto* separated as regards the buildings, but so united by proximity as to be under the control and services of one staff centrally disposed.

Some of the contractors rebuilding the demolished houses, and running up quickly new mansions, have hit upon an ingenious way of raising materials to the top of the scaffold. As the head of water at the Villette is enough to command any of the houses in Paris, they have simply a pipe turned on from the main up to the top of the intended structure, and by that means can fill a bucket or large tub, which, in descending, draws up a plateau on which the materials are placed. The water being turned into mortar, and otherwise made use of afterwards below, is not lost. Some of the materials are also hoisted by Lenoir's machine (by gas); there is one at work at the Rond Pont de Courcelles, close to the Avenue des Ternes. It seems to be, by timing a weight ascending a certain height, about 2½-horse power. The absence of boiler in these engines is a strong argument in favour of employing them where steady slight power is required. At all events, if they are not endowed with the abundant force of a steam-engine, yet in towns and in confined streets, where only a moderate source of power is required to act in a small compass, noiselessly and without nuisance, we have seen that the required mechanical effect can be accomplished without risk of explosion, and consequent damage and loss of life, either to owners or their neighbours. That is something, at all events.

The following new works have been declared of public utility:—

1. The construction of a new post-office on that plot of ground bounded by the Rues de Rivoli, de Mondovi, Saint Honoré, and Neuve du Luxembourg.

2. The prolongation of the Rue de Mondovi as far as the Rue Saint Honoré.

3. The suppression of that portion of the Rue Mont Thabor which lies between the Rues de Mondovi and de Luxembourg.

The new Hôtel des Postes is to form a vast parallelogram, bounded on the north by the Rue Saint Honoré, on the east by the Rue de Luxembourg, on the south by the Rue de Rivoli, and on the west by the Rue de Mondovi. Within this space will be included the western portion of the Rue Mont Tabor, the Caserne de Luxembourg, and the Eglise de l'Assomption. This church and the neighbouring barracks had a common origin, having both been built in the seventeenth century by the *religieuses* called *les Dames de l'Assomption*. The buildings of the barrack accommodation were the property of the order. The church as it stands, is fronted by a portico with eight Corinthian columns; its interior is circular, and is decorated with four arches, between which are Corinthian pilasters, which sustain the circular cornice. This is capped by a cupola 68 ft. 11 in. in diameter. The intrados of the dome was ornamented by Charles de la Fosse, with a great fresco, representing the Assumption. Honasse, one of the best of Lebrun's pupils, Niel and Antoine Coypel, Jacques Stella, and François Lemoine, co-operated in the decoration of this church. Though the style of this building is far from being irreproachable, yet we would fain see whatever is worthy of being preserved well taken care of under its new masters. It would make a splendid sorting-office, whereas its new destination seems to be that of a record or archives depôt.

OZONE AND REFUSE.

At the last meeting of the Herefordshire Antiquarian Society, the president Mr. William Aston, said, when considering the atmospheric condition of the city of Hereford, we are indebted to a gentleman resident here, Dr. Kemp, who, in a contribution on the subject of ozone, at the Bath meeting, very properly reprehended the local practice of accumulating deposits of street sweepings and other offensive matter in the neighbourhood of our public thoroughfares. His remarks and experiments on the nature of ozone are very important to the salubrity of this city, and the peculiar tests for ozone and its neutralizing power in relation to the gaseous products of effete animal and vegetable matter (which tests he has been at considerable trouble in proving), are of a most interesting character, and his conclusions will well repay perusal and consideration. It is to be hoped that the future extension of rational and scientific knowledge will teach civic authorities the baneful effects of these nuisances, and prevent thoughtless errors in matters which have so important a bearing on the general health of the community.

At the close of the meeting, Dr. Kemp, after explaining the nature of ozone, and how it may be detected in the atmosphere by experiment, proceeded to make some practical remarks, bearing upon the health of Hereford, and to which the public authorities, in his opinion, ought to direct their attention. He mentioned, that in the course of the summer he had made experimental observations with respect to this peculiar condition of the atmosphere, in Widemarsh-street, the Bartonsham, and on the tower of the cathedral. He said, it would be remembered, that during last spring the neighbourhood of Widemarsh-street was particularly unhealthy, in the outbreak of scarlet fever, and other epidemics, which no doubt arose from some property in the atmosphere which was unfavourable to animal life, and the result of their experiments showed, that during this time there was a complete absence of any sign of ozone in that locality. He next spoke of the Castle-green, and animadverted upon the circumstance of the adjoining ground being the receptacle for all the filth of the city.

THE ARCHITECTURAL ASSOCIATION.

The usual meeting of members was held on Friday evening (the 25th ult.), at the house in Conduit-street. The chair was taken by the president, Mr. Christian.

The minutes of the last meeting having been confirmed, the following new members were elected:—Messrs. Thos. H. Myers, 11, Oakley-crescent, North Chelsea; Chas. Shoppee, 61, Doughty-street, Mecklenburg-square; W. J. Cooper, 24, Doughty-street; J. Mathew Byrne, 26, Honiton-street; J. W. Lyon, 13, Berners-street; Edwd. Crosse, 46, Carter-street, Walworth; Saml. H. Hope, 10, Ampton-street, Gray's-inn-road.

Mr. Ridge, the hon. secretary, read a report of the Bristol Society of Architects, in reference to the School of Arts established in connexion with the Society.

The Chairman said that it appeared from the report just read that the Bristol society had placed their School of Art on a much larger footing, and proposed to carry it out for a much smaller fee than the Architectural Association was ever likely to do. They ought to take a lesson from the excellent example thus set them. When Bristol had done so much, London ought not to be found lagging behind.

Mr. Ridge then read the report of the general committee on the establishment of a School of Architectural Decoration, to be called "The School of Art accessorial to Architecture." It stated that the school was proposed to be established in consequence of the evident necessity to the architectural student of a better state of art teaching with respect to accurate drawing and modelling of the human figure, and of animal and vegetable forms, in their application to architectural decoration. The business of the school should be conducted by a committee, consisting of the Presidents of the Institute, of the Architectural Museum, and of the Architectural Association, and of ten members; four to be appointed by the Institute, three by the Architectural Museum, and three by the Architectural Association. The course of instruction should embrace drawing and modelling of organic forms, with a view to the obtaining of accurate knowledge of their structure so as to enable the student to apply them in architectural decoration with power and truth. The committee should supply casts and appliances, and when the instructors and visitors reported that a sufficient number of pupils were capable of studying in the life-school, the life-model should be provided, under such regulations as the committee might define. Prizes should be offered for the best works done in the session, as tested by examination.

In pursuance of the recommendation contained in the above report the following were appointed to act as the committee on behalf of the Association:—the president, *ex officio*, and Messrs. Ashpitel, Burges, and Tarver.

The annual report of the Association, embodying its transactions during the session 1863-64, was then submitted and adopted, as were also the accounts and balance-sheet for the past year.

Mr Tarver read the report of the Class of Design, which was adopted.

Mr. Spiers moved a resolution to the effect, that the syllabuses of the classes of the Association ought to be submitted to the committee of the Association before being printed in the journals. He complained that the class of design had adopted as their subject for this year a large church or cathedral in the Mediæval style, to the total exclusion of the Classic style, and of any other subject in any style whatever.

Mr. Lemon seconded the resolution. He considered it absurd that the plan of a cathedral should be sent in, and perhaps six months afterwards the elevations.

Mr. Blashill and other members expressed their opinion that a mistaken course had been adopted by the class in question.

The resolution was put and adopted unanimously.

Mr. Lewis read the report of the curators and librarians of the Association for the session 1863-64, which was confirmed.

Mr. Blashill read the report of the delegates of the Association to the Architectural Alliance, in reference to the professional practice and charges of architects.

The report was ordered to lie on the table, the discussion on it to be taken at a future meeting.

Some routine business having been disposed of, the meeting adjourned.

DAVID ROBERTS, R.A.

ART ARCHITECTURAL in England has lost a great man. England (Scotland properly) has lost her Canaletti. The fine eyes for transferring architecture to canvas that David Roberts had can see no more,—one of the five or six Scotchmen whom the Royal Academy of Arts in London has condescended to admit among the favoured forty is dead.

David Roberts was born at Stockbridge, near Edinburgh, on the 24th of October, 1796. In what way a love of art came upon him he could not tell. The noble scenery in and around Edinburgh:—

> "Edina, Scotia's darling seat,
> All hail thy palaces and towers!
> Where once beneath a monarch's feet
> Sat Legislation's sovereign powers,"—

has kindled many a poet, and in David Roberts created an inimitable painter.

David Roberts, like his friends David Wilkie, William Allan, and John Burnet, acquired the first lessons of art in the Trustees' Academy at Edinburgh,—an institution, supported in part by Government, for the improvement of manufactures and designs in art. He began as a house-painter, and in coating and re-coating, and in graining on Edinburgh coach and house panels, obtained that mastery of hand which he was soon to turn to a nicer and more profitable use. His skill was soon discovered. Murray, of the Edinburgh Theatre, found for him employment and developed that talent which Mr. Macready, in after-life, and in London, was proud to employ both at Covent Garden and at Drury Lane.

In the year 1822, young David, then in his twenty-sixth year, made his way to London, with a skilled right hand, a strong Scottish accent, and a dogged determination of purpose to succeed, which never forsook him. Unlike David Wilkie, David Roberts was long in becoming known. There was no "Village Politician" for a first picture, no "Blind Fiddler," to follow, with our *second* David from Scotland. He did not at once become famous.

One of his early associates in London was Peter or Patrick Nasmyth, our English Hobbema. David, of twenty-six years of age, carried a letter of introduction to Peter, and was prompt in trying to deliver it; but Nasmyth was not so readily found: found, however he was, at last, and in his favourite "howff" (public house), close to the archiepiscopal Palace of Canterbury. David and Peter were at once friends. Mr. Roberts possessed, and was fond of showing, a little picture by Peter Nasmyth for which he had refused—three times over—many hundreds of pounds. It had cost Roberts little, but was precious, and deservedly so, in the eyes of a true artist and a true friend.

Will the reader pardon in this place and at this time a gossiping story which the writer of these "In memoriam" lines derived from the lips of his honoured and lamented friend? Nasmyth, it is well known, led a hand-to-mouth life, and was constantly in want of money. His art-patrons were the Lambeth pawnbrokers, and Peter had a constant friend with three (two-to-one) balls at the Surrey foot of Westminster Bridge, over against Astley's. "Peter Nasmyths," some fine, others hurried, were there to be seen, and were seen by us (in our boyish days). Roberts, in a careful Scotland-yard and Scottish mood, remonstrated one morning with Peter on the "lowering" of his art, and recalled Peter's attention to the pawnbroker's display of Peter's art. The question and reply on the part of David's friend are alike amusing and suggestive. "Are they outside or inside?" was Peter Nasmyth's question. "Oh! they are in," was David Roberts's reply. "Then," continued Peter, "it's no matter; but, had they been out, I—I wadna hae liked it."

Mr. Roberts, like his friend Mr. Clarkson Stanfield, went *against* "The Royal Academy of Arts" in London, and sought public favour in the Society of British Artists, in Suffolk-street. He was soon distinguished, and was courted for in Somerset House. Nor was he long in yielding to solicitations. He became an A.R.A. in 1839, and a full Royal Academician and Esquire in 1841. "If to become a Royal Academician is an honour," said John Martin, "Roberts deserves that honour. Roberts has a fine eye—he sees well, and can make others see what *he* sees." No mean compliment.

Mr. Roberts was a loving Scot at the heart's core. When, in 1858, he returned, with Stanfield, from a trip "due north," he bore away with him a heart full of affectionate warmth to his native land. The Royal Scottish Academy gave, in true style, a dinner to "Davie and Stanny." The late Sir John Watson Gordon (Raeburn's worthy representative) was in the chair, and David Roberts was King David Bruce on that day.

Rehear, Land o' Cakes and brither Scots, what a fine-hearted man, and a skilled painter, said on that occasion:—"I feel almost, for the first time in my life, at a loss for words to say how much I am sensible of the honour which you have this day conferred upon me. It is the fortune of a great many of my countrymen to leave Scotland and to look to other lands for the purpose of bettering their condition; but there is one thing that they never forget, and that is their love of country. Wherever a Scotchman may be,—in whatever distant lands his lot may be cast,—he always remembers those early impressions which he has received at home; and if there is one desire that is more permanent than another, it is the desire to do honour to his native land. Few—very, very few indeed—return to the place of their birth to receive such an honour as has been conferred upon me this day,—an honour which, as I have already said, I am utterly unable to acknowledge in adequate terms. In a former speech your lordship [the Provost] alluded to my early life, and to the few advantages which I enjoyed while in this country. I have had that which is the birthright of every Scotchman—a good religious and moral education. Early in life I was taught the duty of respect to my superiors; but while giving them all due honour I was also taught never to forget that self-respect which belongs to every honest man. If I have risen in life from humble circumstances, and from a humble position, I hope I have done so with honour, with integrity, and with probity; for whatever country a man may belong to, if these things are kept in view, he will never want friends. I have certainly through life met with many friends; and I very rarely, if ever, lost them. The same principles which have guided me I am sure guide thousands of my countrymen; and if I, a humble apprentice boy, from this my native town, have, by adopting these principles, risen to the highest distinction that can be conferred in my profession, I trust that others, such as I then was, may be incited by an honourable and laudable ambition to follow out the same principles of integrity and honour which must ultimately lead to their advancement in life; and if my acceptance of this mark of the respect of the city of Edinburgh should be an inducement to the apprentice boys of Edinburgh to persevere in a course of laudable and honourable conduct, in their names I accept this honour, and with gratitude return my sincere thanks to you for it. I hope I shall never disgrace this burgess-ticket; I am sure I shall always prize it and do honour to it. Your lordship has alluded to my presentation of a picture to my native town; but I am aware that I have only done that which hundreds of Scotchmen would have been very proud to do if they had been placed in my position. I believe that the arts confer a great benefit on mankind. I am sure that the contemplation of a beautiful picture, whether it be a landscape or a representation of an historical event, must tend to raise the mind to better and higher objects. I believe that the contemplation of a picture in a national gallery appeals to the most uneducated as well as to the best educated and most cultivated minds; indeed, I believe that it has more influence on society than most of us are aware of. I should like to see a national gallery in all the principal towns of my native land. There are thousands who can understand a picture that cannot understand an epic poem, and the influence which a beautiful picture has upon mankind is probably greater than the world is aware of. In that belief, and with that feeling, I presented to my native town a work, of which I shall only say, that I wish it had been better. But, at all events, I hope it will be preserved, and that it may do something towards carrying out that great object which the Scottish Academy have in view, by directing the attention of the citizens of Edinburgh to the promotion of the arts which confer so much good upon society, and which must make us better and wiser men. I again say, that I feel a total want of words to express my sense of the honour which has been conferred upon me; but, wishing success and prosperity to the city of Edinburgh, I thank you for it from my heart."

David Wilkie sent David Roberts to the Holy Land, and both "unlanguaged" carried with them their Scottish tongues and their Edinburgh printed Bibles. The *two Davids* returned with different mental wealth; but both have left—David Roberts especially—noble and enduring monuments of what they saw.

David Roberts should be buried in St. Paul's, near to Sir Christopher Wren and his old artistic enemy and friend—J. M. W. Turner.

FRESCO-PAINTING, AS APPLIED TO THE DECORATION OF ARCHITECTURE.

A PAPER on this subject was read by Mr. J. B. Atkinson at the second meeting for the present session of the Bath Literary and Philosophical Association.

At the outset Mr. Atkinson said he proposed to treat of the relation and reciprocity that might exist between the two arts of painting and architecture. Architecture had been rightly deemed the parent art, whence had sprung, and around which had clustered, the subsidiary arts of sculpture and of painting, as the offspring of the more ancient stock. This family bond of a common birth long held in union even the remote and collateral descendants, content to be housed in concord under one roof. Thus painting was, among ancient nations and in early epochs, always found clinging close to architecture, the very ribs and body out of which it had first sprung. Thus the temples and the palaces of India, of Asia Minor, of Egypt, of Greece, and of Rome, were adorned by paintings which, as faithful allies, sought to enhance the majesty and the beauty of the original master-work. But in the lapse of time schism came to mar this happy union. A Babel uproar of conflicting styles and schools had torn and tortured the once united polity of the accordant arts. Painting, in particular, in her severance from the central stock, had become itinerant and vagrant, had lost in dignity just as much as she might have gained in freedom; and, on the other hand, architecture, denuded of her ordained decoration, instead of being clothed in colour was shrouded in whitewash.

It was the object of that lecture to join once more those arts which since the Middle Ages had unhappily been divorced; to show upon what terms a reconciliation might be effected; to point out what surrender of antagonism must be conceded, so that the varied modes of painting, among which fresco was the chief, might be made, now again, as in all prior epochs, conducive to the harmony and the splendour of architectural composition. He had chosen fresco, because of all the processes of mural decoration it was the one in which the painters of the Middle Ages chiefly delighted; it was the method that had transmitted to us the grandest creations the world had yet known. Notwithstanding the failure and premature decay of the mural paintings in the Houses of Parliament, he still firmly held to the opinion that the ancient process was not only noble and architectonic, but that when executed with knowledge, and with due care in the use of materials, fresco paintings might now in England, as in Italy of bygone centuries, be rendered enduring as the wall and tenement they were designed to decorate.

It might seem little better than a truism to declare that the purpose for which a building was designed must regulate the character of the pictorial subjects employed in its decoration. It would at once be evident that a church for worship, a hall for legislation, and a house for domestic uses, would each call forth distinct and appropriate trains of thought, which, like visions, might be emblazoned on the walls. The devotee of the Middle Ages knelt in a side chapel of the Florentine Church of La Trinita in the presence of a fresco picture representing the death of holy St. Francis. Again, the Podesta, or chief magistrate of the Tuscan Republic, they were told by Vasari, was surrounded in his hall of state with a grand composition by Giotto, the figure of the commune seated in the character of a judge, with a sceptre in his hand, and scales equally poised over the head to indicate befitting rectitude in his decisions. And then, if they turned from the solemnity of the Church, and the dignity of the state, and entered within the sphere of domestic life, they found that Agostino Chigi, the Roman banker, of the sixteenth century, called to his aid Raffaelle, Giulio Romano, and Giovanni da Udine to adorn the stanze and loggia of his palace, now called the Farnesina, with the poetry and romance of the Grecian Parnassus: so that visitors walking in at the garden door were greeted by Venus, Psyche, Cupid, and the Graces; and guests

seated at the table might gaze at Galatea floating in her shell drawn by sportive dolphins. Religion should inspire the decorations of the Church; patriotism should ennoble the adorning of our halls of justice and legislation; poetry should bring to our private dwellings the charm of beauty, and invoke the spell of imagination. Remarking, in passing, that the Church had extended to painting and architecture, the most munificent of patronage, the lecturer went on to observe concerning the choice of a subject, that of the subjects chosen by painters for the decoration of architecture, the boldest, the grandest, and the most imaginative were perhaps Michel-angelo's frescoes in the Sistine, and Correggio's frescoes in the domed churches of Parma. He could see no objection to the repetition of Raffaelle's cartoons along the walls of a country church, and he knew of no reason why the artist who had succeeded in making a broad and bold translation of these compositions for one building might not be employed in the multiplication of the same works until every county should possess at least one church so adorned.

The practice of mural decoration once instituted, monotony might easily be made to give place to variety. The difficulty was to render mural painting popular and widely diffused, at once economic in cost and excellent in style. For that end it would be desirable that several series of subjects should be designed by the first artists of the day. These drawings might become through purchase or premium the common property of the profession and the country, and so be disseminated as cartoons which merely manipulative artists could transfer to the walls of a sacred edifice. In all monumental painting it must be remembered that the artist who with fewest touches, fewest colours, and fewest figures, would tell his story was best qualified for the task of mural decoration. What had been said of subjects suited to a church, would, in a greater degree, supersede the necessity of adding much on the secular side of the question. What might be said of a national palace would stand good for a municipal town-hall. In the chief building of a provincial city national themes naturally gave place to local chronicles, and hence the topics sought after were those which had conferred honour on the locality, or which recorded the virtues of illustrious citizens. Again, the interval between a municipal building and a private dwelling might be wide, yet the essential principles which lay at the root of all mural decoration were subject to little change, and indeed might be pronounced all but immutable. Of private mansions he might safely declare that just in proportion as the mural paintings had less of state and historic import, so might they enter upon the realms of poetry and usurp the regions of imagination. Reception and banqueting halls should be festive and sumptuous; and he knew of no scenes which responded more warmly to hospitality and good cheer than those that the Italian painters borrowed from ancient mythology. He feared, however, that the time was still far distant when English noblemen would emulate the example of the princes of Italy. He trusted that ere long the arts of painting, sculpture, and architecture might receive from the Universities the recognition that would bring to those centres of learning commensurate reward; and then, when the graduate returned to his ancestral domains, he would carry with him knowledge that might direct and inspire the village Phidias and Apelles; and, failing the power of original creation, cunning hands would not be wanting for the transfer of figures from a Greek vase, or for the adaptation to a frieze or panel of the designs of Flaxman.

To sum up the whole matter in reference to the choice of a subject in brief, he would say: "Let the topic chosen commend itself by its simplicity and dignity: cast out from it every figure, incident, or detail which militates against grandeur of effect, or singleness of aim: let the facts expressed have the stability of the structure they adorn; and, above all, let the style, removed above ordinary nature and commonplace, severe, and even stern, reach to a generic type, and be redeemed by its elevated truth and beauty: thus, and thus only, can painting aspire to become the equal and honoured associate of architecture."

Mr. Atkinson next considered the conditions which should govern the composition and treatment of the subject chosen, and spoke strongly against the fitting in, as it were, of frescoes into limited spaces, after the style of a picture-gallery. Architecture, he felt, had reason to complain of the injury she had received at the hands of her sister, Painting. Architectural forms had been but too often violated for the sake of a florid display of colours, and a rampant assemblage of pictorial forms. The question claiming consideration was how a pure and holy alliance may be maintained between painting on the one hand and architecture on the other—an alliance and an allegiance which shall prove equally to the honour and welfare of each. In the interest of that amiable union mutual concessions must be made. Painting, on the one hand, must learn to be monumental; and architecture must submit to be decorative. Lastly, Mr. Atkinson proceeded to lay down some of the leading principles for the use of fresco painting as a means of colour. Colour had often proved to architecture a snare. Rich marbles, gold and other glittering and precious materials, had frequently corrupted purity of form, and given in exchange but barbarity of grandeur. To escape that abuse, colour must be employed in strict subjection to structural fitness. It must serve to build up, not to seek to undermine, the edifice to which it should cling as an ally, not attack as a foe. For this aid it must assist to develop form, it must enhance light and shade.

The lecture was illustrated by chromolithographs and engravings of various specimens of fresco painting.

THE BASINS OF THE ST. OUEN DOCK COMPANY.

On Sunday, the 13th ult., took place the inauguration of the great basin, and the launching of one of the floating warehouses of the Saint-Ouen Railway and Dock Company. In spite of the rain, which never ceased to pour in torrents all the day, a vast concourse of persons assembled to witness the ceremony. This company, entitled La Compagnie Anonyme du Chemin de Fer et des Docks de Saint-Ouen, with a capital of 400,000*l.*, has executed immense works around the ancient station of St. Ouen, with a view of uniting, on the same level, at Paris, the *réseau* of all the railways with that of the navigable canals. The St. Ouen Railway starts from the Chemin de Fer de Ceinture, traverses the fortifications,—the rampart by a tunnel, and the moat by an iron bridge,—passes the route De la Révolte on a level, and ends at a spacious goods station. Here the lines of railway divide into innumerable segments, in all directions, by means of turntables, and present a united development of about 2,200 yards. These are so disposed that the waggons and boats can transfer conveniently and directly merchandise from one to the other at suitable quays and under roof. The large basin is 9 ft. 10 in. deep, from 164 ft. to 492 ft. broad, and measures about 13a. 2r. 14p. in area. The wall surrounding the dock is of solid masonry, built vertically, and is in development about 2,200 yards. Behind this are sheds, stores, and warehouses, accessible by rail, water, cartage, or any conveyance imaginable. This magnificent piece of water communicates with the Seine by means of a lock, 197 ft. long by 39 ft. wide. An avenue, 65 ft. 7 in. wide, and 650 yards long, communicates with the west of Paris by the Avenue des Batignoles; another will lead to the east of the town through the Boulevart Magenta. The warehouses and *halles* of the Saint-Ouen-Paris Dock Company will, when completed, compete with those of London or Liverpool. They are to consist of, in addition to the depôts, magazines, and platforms of the ancient Saint-Ouen station, a variety of immense constructions, all fire-proof, built with wrought and cast iron, bricks, and stone, occupying nearly fifty acres of ground. These are to be—1st. A loading and unloading quay, between the canal and the rail, 547 yards by 26 ft. 3 in., with twenty powerful cranes, and roofed over. 2nd. Warehouses five stories high, presenting 59,800 square yards of flooring divided into 500 chambers, each of 119·6 square yards, for dry goods of all sorts. 3rd. Floating warehouses, of which two are already in the water, and three more are being constructed. These consist of a group of 100 cylindrical wrought-iron tanks, each holding 5,500 gallons—in all 550,000—admirably adapted to contain oils, spirits, petroleum, &c., or any inflammable liquid. These are moored in the centre of the basin, free from all risk from fire. In case of danger, they can be at once drifted into the Seine. 4th. A storage platform 547 yards long by 29 ft. 6 in. broad, forming a surface of 1a. 0r. 18p., and capable of maintaining 500,000 tons per annum. 5th. Behind this platform a covered roadway of the same length, and 26 ft. 3 in. wide, forming a surface of 4,784 square yards. 6th. Between this covered way and the street circulating the exterior of the docks, and forming the ground-floor of the warehouses, 131 arches each, being 13 ft. 2 in. wide, 16 ft. 5 in. high, and 26 ft. 3 in. deep: these are to be apportioned thus—six near the entrances for guards, &c., and the arrival and despatch offices, twenty-five for the custom-house officers and commercial agents, and 100 to merchants. 7th, and lastly. On the third story of the warehouses, five large halls for counters, with a glazed gallery to contain specimens and samples of all sorts. All the above described structures are grouped together round the basin, and are capable of holding in stock 50,000 tons at a time of merchandise of all sorts. The whole of this work has been designed by M. Préfontaine.

YORK SCHOOL OF ART.

The annual meeting of the subscribers and friends of this school has been held in the Institution. There was a numerous attendance, and Lord Houghton occupied the chair.

The Chairman, in course of his opening speech, spoke of the question of payment to schools for results. His lordship said, that when he was a member of the House of Commons, he took a different view from the Government, as he did not believe such a provision could be advantageously carried out. He thought that some consideration should be shown to teachers in this and such establishments, not only as to their material advantages, but as to their moral position; and it appeared to him, that a master either in the school of letters or of art, who has to depend on anything so fluctuating as the intellectual results produced on the minds of his scholars, feels an uncertainty of position, and therefore a discomfort of mind, which, in nine cases out of ten, incapacitates or weakens the capacities of such a master. Whatever rules were established, however, by the department to which he had alluded, he hoped they would submit to them cheerfully, and make the best of their position, even though they did not like it.

Reverting to the general question of the advantages of schools of art, even to those who were not artists, he said the topic was one upon which he could enlarge for some time, because it was very cognate to one in which he had himself taken considerable interest. There seemed to him to be a great analogy between the art of design, as prosecuted in that school, and poetry, to which he had given some little study. He had felt from his own experience, and had said to others, that he believed one of the great advantages of the study of the art of poetry was not the desire of becoming a poet, or succeeding in so wonderful and difficult an art, but that it enabled them to cultivate their own faculties and nobler perceptions, and they would find, that any man who could write decent verse would be likely to write good prose, and be otherwise a man of general culture. So it was in application to art. A boy taught to draw well, correctly, precisely, would find it of advantage in after-life, even in totally different and distinct pursuits. In his moral culture, in the punctuality of his habits, even in the cleanliness and decency of his person—in all these things the boy who had cultivated the study of art would find advantages in after-life, even although obliged to give up the pursuit of art altogether. He thought, too, that these studies acted most advantageously upon the general and moral well-being of the country. They might all see with satisfaction that there had been of late years very great progress in the general artistic tastes of the people. Just look at the number of engravings and good pictures found in all sorts of places, even in the houses of the very poor. Look at the general improvement in the decoration and architecture of their towns. Look at the increased enjoyment various localities experienced almost every day in the exhibition of their own magnificent works of art; and they need have no stronger instance of this progress than in the interest which that city had taken in opening out their glorious Minster, and exhibiting it after so many ages in something like its true grandeur.

Mr. J. Swallow, the master, spoke of what had been done by schools of art,—adequately supported. It is scarcely possible, he remarked, to

estimate the exact amount of resultant good that has been attained. Many of the rising artists and architects have received some part of their education in these schools. It is evident that great improvement has been visible since their establishment, and more especially in art manufacture. How much of that may be due to French influence I cannot pretend to state; but we must not forget that formerly all our designs were imported, or were of foreign origin, and that we are now in many departments of our manufactures indebted to them. But, on the other hand, we know that the schools of art have had a beneficial effect on the educational taste of the country. They have assisted to develop dormant tastes in the people and amongst artworkmen. English damask has been much improved. The Norwich shawl manufacturers almost entirely rely upon English designs. Mr. Clabburn, one of the principal manufacturers, thinks our shawl designs are equal to the French. It is admitted that in the Potteries there are now many hundred young men who can draw intelligently and well, and who have improved their position. Pressers and moulders have become modellers. Gilders attend the School of Art to become painters, and so on. English pottery designers have greatly improved, but are said to be still inferior to foreign modellers and painters. In the Nottingham lace, the case is altogether the reverse, and the French are said to pilfer the English patterns. Sheffield is noted for its designers in metal work. Birmingham, Edinburgh, and some other schools have a deserved reputation. There is also improvement distinctly marked in glass, furniture, and other trades. Nor must we forget that the wide-spread teaching of mechanical drawing in the schools must be of great advantage to engineering workmen, in enabling them to make working drawings, and to intelligently carry out those of others. These, then, are some of the advantages already conferred by schools of art.

BRITISH ARCHÆOLOGICAL ASSOCIATION.

AT the first meeting, held November 23rd, Mr. Godwin, V.P., in the chair, the Chairman called attention to the prosperous condition of the Association, and referred to the success of the Congress held at Ipswich in August, and the great attention paid to the objects visited, and the members present, by the President, Mr. George Tomline, M.P. Many new members had been added, but the Society had unfortunately experienced a great loss by the decease of the Duke of Newcastle, K.G., Mr. Hudson Gurney, and the Right Hon. Thomas Erskine, zealous associates. The Congress for 1865 had been arranged to be held in August, at Durham, under the presidency of the Duke of Cleveland. A list of thirty-five new associates was read. Mr. Syer Cuming, in laying before the meeting a variety of pseudo antiques cast in lock metal, reviewed the steps taken by the Association in regard to the detection of these forgeries, proceeding to trace them as springing from an idea in France, its development in this country, and its extraordinary progress in objects in lead. The sale of these, from the various exposures, particularly by the trial at Guildford (Eastwood *v. Athenæum*), for publishing a report of the proceedings of the Association, rapidly decreased. In 1863 came forth casts in lock metal, a composition of two parts copper and one of lead; it melts at a low temperature; and in plaster of Paris moulds have been produced spear heads, daggers, celts, &c.; some of considerable size. Mr. Cuming exhibited several of these, and as the trade still flourishes, repeated his caution to antiquaries on the subject. Mr. Gould, Mr. T. Wright, and others confirmed Mr. Cuming's statement, and gave examples in illustration. Mr. T. Wright exhibited some pieces of Greek Samian ware from Tarsus, in Cilicia, and pointed out their resemblance to the red Samian pottery of the Romans found in Britain and Gaul. A letter from Mr. Thompson, of Leicester, was read, announcing that under the direction of the Leicestershire Society important excavations had been commenced at the mass of Roman masonry in that town known as the Jewry Wall. Dr. Brushfield forwarded a paper on Roman Intaglios, discovered at the station Petriana, on the great north wall of Hadrian. They were six in number, and impressions of them were exhibited. Two were gnostic seals in sardonyx, the others in red composition and in blood stone. Lord Boston exhibited a portrait of Henrietta Maria, upon paper spread on an oval panel, and attributed to Sir Peter Lely, but bearing a close resemblance to one of Vandyck's pictures of the queen.

Mr. Planché read a paper on the "Nine Worthies, Male and Female," in illustration of a series of curious paintings on panel, in Amberley Castle, Sussex, referred to in our pages recently, and which were thought by Dallaway to be allegorical representations of Flemish provinces. After giving several lists of the nine worthy men and nine worthy women, all varying one from the other, not only in the names of the personages, but in the coats of arms absurdly attributed to them, and, therefore, showing that no dependence could possibly be placed upon the integrity or congruity of any particular series, he referred to a catalogue of French worthies in Andrew Favine's "Théâtre d'Honneur," published in 1620, consisting principally of Queens of the Amazons, who are therein described as bearing armorial insignia generally resembling, and in three instances identical with, those painted on the shields of the armed and crowned ladies portrayed on the Amberley panels. Mr. Planché exhibited photographs of five of these pictures, and described from Mr. Gordon Hills's account the three remaining perfect. A fragment of a ninth had since been noticed by Mr. Hills, who is engaged in the restoration of the church adjoining, confirming Mr. Planché in his theory respecting them. The name of Cassandra had been deciphered under one of them, and the word "Babylon" under another. Cassandra was not included in any of the lists the reader had seen; but Semiramis, Queen of Babylon, was mentioned in two of them. It was very probable that the painter had substituted the celebrated prophetess for some other illustrious personage, although the rest of the inscription was too illegible to render it clear by the context that the name actually applied to the portrait. The main object of the paper was to show that nearly every author selected his own nine worthies, and that the painter of these panels must, from the very remarkable character of the coats of arms, have been acquainted with some catalogue closely resembling that which has been preserved by Favine.

THE LIFE ASSOCIATION OF SCOTLAND ASSURANCE COMPANY.

THE extensive and costly pile of buildings styled the Life Association of Scotland Chambers, having been just completed, the office was opened for public business a few days ago. The site selected for the structure is, perhaps, the most central in the city of Dublin, presenting a frontage of 41 ft., in Dame-street, opposite the Chamber of Commerce, and returning 43 ft. in Trinity-street adjoining. No expense has been spared to render this building a creditable representative of the magnificent offices erected for the company in Edinburgh, founded in 1838. The entire of each façade, five stories in height, being faced with dressed ashlar masonry from the Kenmure quarries.

The Italian style of architecture, of Palladian character, has been adopted. The ground floor, presenting a series of rusticated piers, extends to the top of *entresol* story, having moulded joints and vermiculated faces, surmounted by a frieze and cornice. The windows in upper stories are ornamented with balconies and balusters, moulded architraves, carved consoles, and alternate, straight, and segmental pediments. A deep frieze, enriched with metopes and modillions, and high balustrade, conceals the windows which light the apartments in the roof. The office entrance, situate in the centre of the principal front, is decorated with pilasters supporting projecting consoles and rusticated arch, with enriched keystone and pediment. The doors are of Riga oak, panelled, moulded, and varnished.

The ground floor affords accommodation for the business of the company, consisting of public offices, secretary's room, fireproof safe, board-room, doctor's-room, retiring-room, &c.; having a commodious set of offices for letting, on the right of central entrance, with basement story for each suite of offices, lighted by windows above the level of street paving.

The works have been executed by Messrs. Morrison, under the directions of the consulting architect, Mr. Bryce, of Edinburgh; and superintending architect, Mr. Charles Geoghegan, of Dublin. The total outlay on the premises has been about 8,000*l.* The execution of the office counters, desks, framings, and furniture, is well calculated to sustain the reputation of the manufacturer, Mr. William Brunton.

APPLICATION OF SEWAGE TO AGRICULTURAL PURPOSES.

AT the last ordinary meeting of the Middlesex magistrates, Mr. Henry Pownall in the chair,

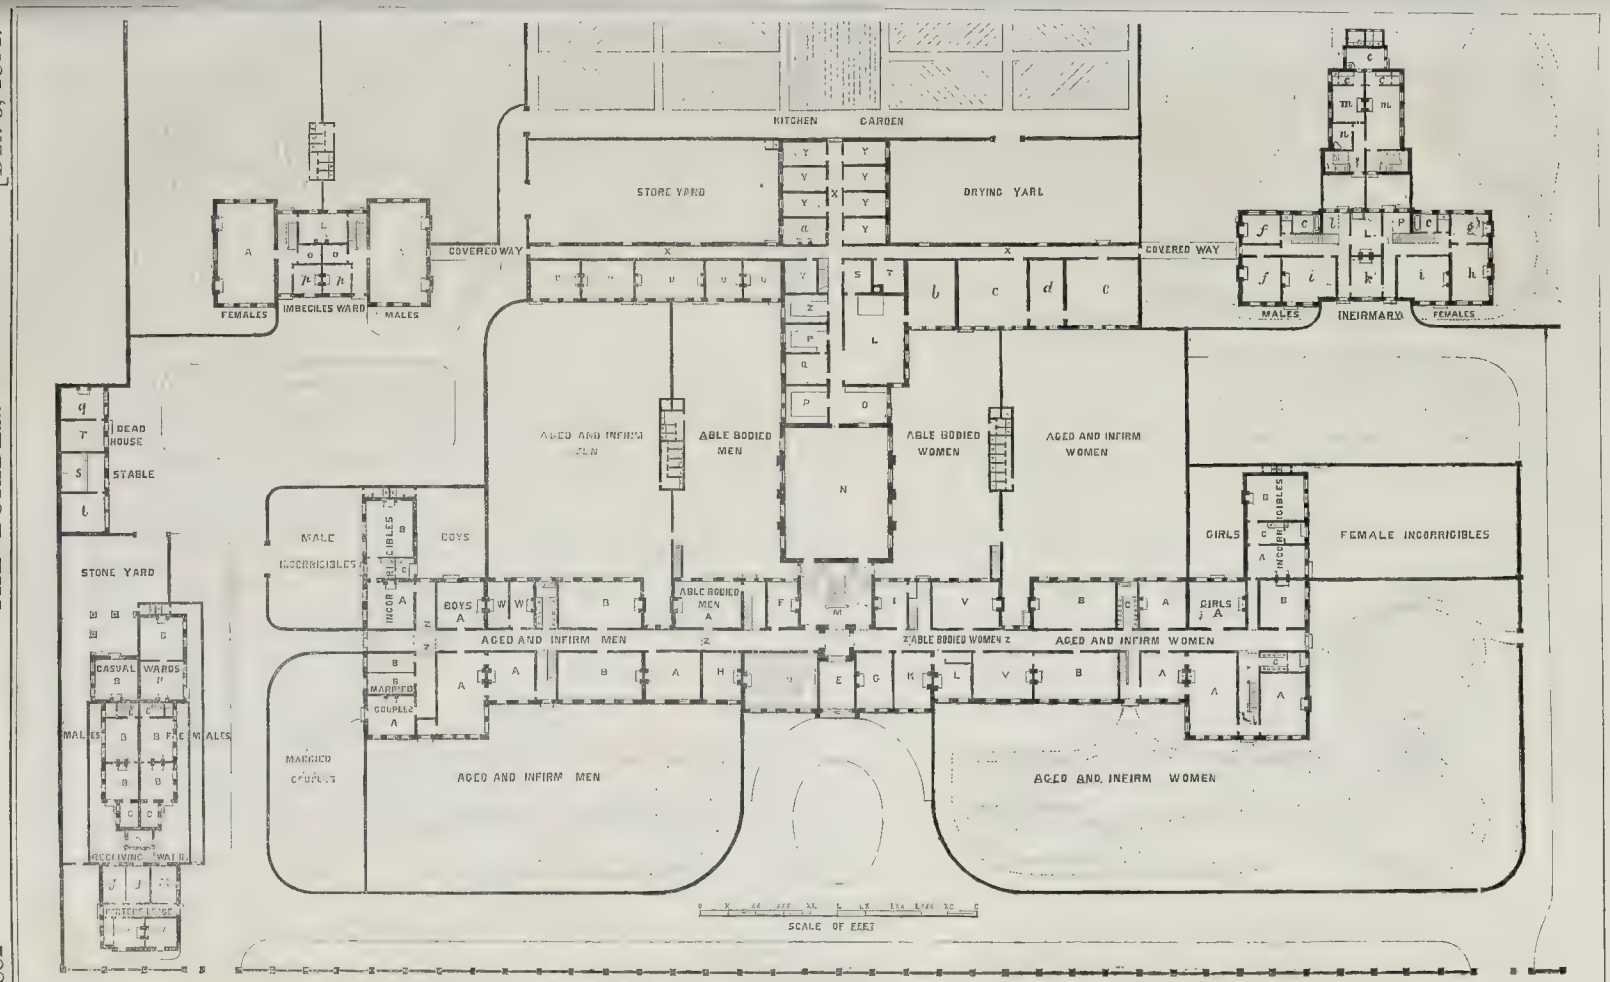
Sir Alexander Spearman, chairman of the committee of visitors of the Hanwell Lunatic Asylum, moved, "That it having become necessary to relieve the river Brent and the canal from the sewage of the asylum, and it being desirable to utilise the sewage upon the land of the asylum under cultivation, a sum not exceeding 1,500*l.* be granted by the Court for the purpose of providing the requisite irrigating, pumping apparatus, steam engine, collecting tanks, machinery, and works for carrying into effect a plan for the utilization of the sewage of the asylum, which has been approved by the committee."

The motion having been seconded,

Mr. Mitchinson said the Court ought to proceed with great caution in this matter, for some years ago the practice of sewage irrigation at Feltham was carried on, and the consequence was that 75 per cent. of the boys then in Feltham school were found to be suffering from ophthalmia, but when they ceased the sewage irrigation ophthalmia disappeared, and there was not a single case of complaint.

Mr. Kemshead said they did not come to the Court without some experience, as they had tested it at Hanwell for six or eight months, and he was not aware of any complaints having been made at Feltham.

Mr. Thwaites thought they might irrigate the land by moderate dressings of sewage with perfect safety, and he believed with profit, and at the same time it would save the neighbourhood from a great deal of mischief which would arise from the pollution of the streams into which the sewage was turned. This was a rapidly-growing evil, and he had no doubt that, in the next session, Parliament would be called upon, by stringent legislation, to prevent that which might undoubtedly become a great evil; for if a panic should arise they might have sudden legislation, which was always unhealthy, and therefore he thought that the committee had taken the right course, and he should give the motion his hearty support.



The motion was put and unanimously agreed to.

NEW WORKHOUSE, WEST LONDON UNION.

WE give a ground-plan and view of this building, now in course of erection in the Cornwallis-road, Upper Holloway. The house is designed for about 500 inmates. The buildings are of brick, with bright yellow malm facings and red brick bands at intervals. The dressings to the doors are in Portland stone. The dining-hall and chapel over, and the principal staircase, will be heated by hot water, and cold water will be laid on to all the baths. The contract (23,492*l.*) was taken by Mr. Henry Hart, of Great Dover-street, Borough. The architects are Messrs. Searle, Son, & Yelf, of Bloomsbury-place. The board-room and offices, the relieving officer's and other offices, will be erected somewhere within the limits of the union.

NEW WORKHOUSE, WEST LONDON UNION.—*Plan of Ground Floor.*

INTENDED NEW WORKHOUSE, WEST LONDON UNION; IN UPPER HOLLOWAY.—MESSRS. SEARLE, SON, & YELF, ARCHITECTS.

ST. SAVIOUR'S CHURCH, BACUP, LANCASHIRE.

THE town of Bacup is situate about 20 miles north of Manchester, at the head of the valley of Rossendale. From a small village it has increased of late years to a considerable cotton manufacturing town of 14,000 inhabitants. The old church, built about a century ago, has long been too small for the population, as with galleries it only seats about 600 persons; and, being in a very insecure state, it has been found necessary to close the galleries and shore up the south wall until funds can be raised for rebuilding. A few years since a small church was built at the east or upper part of the town, or rather out of the town; but the inhabitants of the lower and newer portion have been for a long time without proper church accommodation. To remedy this evil a new district has been formed, and a church, parsonage, and schools have been built at the entire expense of Mr. James Maden Holt, J. P., and upon his estate; the architect employed being Mr. E. Wyndham Tarn, of Guildford-street, London. The schools were first erected, and have been licensed for divine service until the completion of the church; but the congregation having outgrown the dimensions of the school, which seats about 600, the erection of the church has been hastened forward, and its consecration by the Bishop of Manchester will shortly take place.

The total internal length of the church is 120 ft.; width of nave and aisles, 53 ft. Seats are provided for 750 adults on the ground-floor, and for nearly 300 children in a west gallery.

The nave arches are seven in number, and supported on polished red Aberdeen granite shafts, 14 in. diameter. The chancel is terminated by an octagonal apse, and has a roof formed of curved timber ribs, springing from corbels, and boarded over. Four white marble panels, 11 ft. high, are let into arched recesses between the windows of the apse, and on them is engraved the decalogue, creed, and Lord's Prayer.

The nave is covered with a polygonal ceiling of timber, with semicircular main ribs springing from corbels between the arches, and formed of three thicknesses of 3-in. planks on the De l'Orme principle, the centre thickness being cusped. The polygon, which is divided into panels by moulded purlins and intermediate ribs, is boarded throughout, the centre compartment being pierced for ventilation with tracery, filled in with perforated zinc, coloured blue, which opens into an air-chamber formed in the upper part of the roof, having louvre ventilators to open and shut at each end.

The aisle roof is of open timber, boarded on the upper side. All the roofs are boarded, and felted under the slates. A small transept is built on the south side, to form a private chapel, having an arcade on each side, with serpentine columns and alabaster panels, on which inscriptions are engraved in memory of several members of the donor's family, who are interred in a vault adjoining the church.

The tower, which is placed at the north-east corner, is 20 ft. square at the base, and the height to the top of the cross is 150 ft. The lower portion forms an organ-chamber, having arches opening into the chancel and north aisle. A peal of bells will be placed in the upper story, and a clock will be placed in a gabled dormer on the north side, at the base of the spire, one of the spire-lights being omitted on that side for this purpose. The basement of the tower is occupied by the warming apparatus, the hot-air system of Messrs. Haden, of Trowbridge, being used.

One peculiarity of the church is the baptistery, provided for the immersion of adults (when required), which is sunk in the middle of the chancel, with a descent of five steps; the whole being covered by ornamental gratings, laid level with the floor. This position is selected as being near the vestry.

The pulpit is of pitch pine, on a stone base, supported by four columns of verd-antique. The desk, fittings of chancel, and lobbies to the entrance-doors are also of pitch pine, the whole having been made by Messrs. Cox & Son, of Southampton-street. The benches of the church are open, and of stained yellow deal.

The lighting is by two gas coronas in the nave, and one in the chancel, with brackets in the west gallery and to the pulpit and desk, the whole supplied by Messrs. Hart & Son, of Wych-street. The aisles are lighted by means of Hammond's ventilating gas-lights, made from the architect's designs, by which vitiated air is removed from the church.

The passages are laid with kamptulicon, upon a concrete foundation, floated with Portland cement and surrounded by an edging of 6-in. red and black tiles. The chancel is paved with Maw's encaustic tiles.

Three years have passed since the foundation of the church was commenced, some delay having been occasioned by the necessity which arose of opening a fresh quarry on Mr. Holt's estate, from which the greater part of the stone has been obtained.

The mason's work has been done without any contractor, and under the superintendence of Mr. Robt. Mulley, the clerk of the works, the "banker masons" having been paid by the piece, and the wallers and setters by the day. The locality being peculiarly subject to driving rains, blue lias lime was used for the mortar, which was mixed in a mill. The carpenters' work has been done by Messrs. Barlow & Pott, of Bacup; the plumbing by Mr. Bulcock, of Bacup; and the slating by Messrs. Goodwin, of Huddersfield. Messrs. Edmundson, of Manchester, supplied the glazing; and Mr. Field, of Parliament-street, the marble.

CHURCH-BUILDING NEWS.

Hornsey-road, London.—The foundation-stone of St. Barnabas's Church, Hornsey-road, has been laid. The site is in the Harvest-road, Hornsey-road. The edifice, when completed, will be in the Gothic style, Early Decorated, and the dimensions 62 ft. by 94 ft., with sittings for 1,270 persons, 690 of which will be free. A tower and spire will also be erected, of the height of nearly 100 ft., and the whole, from the design of Mr. Green, architect, has been given for erection to Messrs. Carter & Sons, builders.

Cheam.—The new parish church at Cheam has been consecrated. The edifice has been erected on a site in the churchyard, parallel with the site of the old church, but exceeding that in its dimensions. The nave and tower were commenced in the early part of last year, and the whole has now been completed by the addition of the remaining portions, with the single exception of the tower, which is at present carried up to the height of the ringing-chamber only, but which is destined ultimately to support a spire. The building is in the style of the later First-pointed Gothic, and is faced externally with Kentish ragstone and Bath stone dressings, and internally with red bricks, relieved by bands of black, and having Bath stone stringcourses, voussoirs, &c., and columns of blue Pennant stone, with carved capitals. The plan consists of a nave with five bays, 65 ft. long, with lean-to aisles; a tower at the north-west angle; an apsidal chancel with an organ-chamber, and a vestry on the north side; and on the south a chancel aisle appropriated to the national school children. Provision has also been made, by a *quasi* north transept, for the accommodation of the pupils belonging to Cheam school. Altogether the total number of sittings amount to a little over 600. Stained glass, presented by Mr. J. Hibbert Tate, and executed by Messrs. Clayton & Bell, has been already placed in the four western lancets of the nave, and it is hoped that the large rose-window above, and the chancel lights, may also very shortly be similarly embellished. The subjects of the stained glass already fixed are taken from the life of St. Dunstan, to whom the church is dedicated, commencing with his education by the monks at Glastonbury, and terminating with his burial in Canterbury Cathedral. The church has been erected from the design and under the supervision of Mr. F. H. Pownall, architect, London; and the contractors are Messrs. Sharpington & Cole, of Lambeth; Messrs. Edwards & Son, of London, having furnished the warming apparatus. The total cost of the building will amount to about 4,500*l.* Of this, only 250*l.* now remain to be subscribed. It is intended to retain and fit up as a receptacle for the monuments existing in the old church a portion of the old chancel known as the Lumley Chapel, which will thus be left standing as a detached building in the churchyard.

Abbot's Langley (Herts).—St. Paul's church, Langley Bury, has been consecrated. It has been built entirely at the expense of Mr. Jones Loyd, of Langley Bury. It is situate in the hamlet of Hunton Bridge, about two miles distant from the parish church. The new church is in the Decorated style. Mr. Woodyer, of Graffham, near Guildford, was the architect; and Messrs. George Myers & Sons, of Lambeth, were the builders. The church consists of a nave, north aisle, chancel, with vestry, organ chamber, and south-west porch; and a private mortuary chapel on the south-east side, for the Loyd family. The church is built of squared flints and Bath stone. The tower with spire is 130 ft. high. The latter is made of wood covered with oak shingles. The length of the church is 108 ft.; the nave is 18 ft. wide, and the chancel 16 ft. 6 in. There are sittings for 200 adults and sixty children, exclusive of those in the chancel: 100 sittings are free. The seats are of wainscot oak, and of modern style. The roofs are of stained timber, open to the ridge, with white plaster between the rafters. The interior pillars are composed of clustered columns, of Forest of Dean stone, with moulded bases and carved capitals. The carving both within and without the church was done by Messrs. Myers. The arcades are carved with figures of angels in postures of prayer and of praise. The chancel arch is carved. It is supported on Forest of Dean shafts. The chancel is paved with Minton's encaustic tiles, and the nave with those of the Pottery company, of Poole, Dorset. The tower contains a peal of six bells, cast by Messrs. Mears, of London, the chief tenor of which weighs 8 cwt., given by the congregation, and a foreign bell given by Lord and Lady Rokeby. The church is heated by hot-water pipes, supplied by Minton & Son. Mr. Beckensall was the clerk of the works, and Mr. Shillitoe, the foreman.

Tenbury (Worcestershire).—Woolferlow Church, near Tenbury, which has been undergoing restoration for some time past, has been re-opened. The church is an Early English structure (with relics of Norman work), dedicated to St. Andrew. From age the building has become much dilapidated. It is now restored from the designs of Mr. Cranston. A great portion of the walls has been rebuilt. The framework of the roof is new, of red deal, after the pattern of the original. The bell-turret remains, surmounted by a spire of cleft oak shingles. The tracery of the windows and the new font are of Bath stone. The floor has been laid with black and red quarries, and open seats are substituted for the high-backed square pews. A vestry and stone porch have also been added. The edifice now affords sittings for upwards of 100 persons.

Paignton (South Devon).—The recently restored chancel of the parish church has received a permanent decoration, the work of an amateur artist, Mr. Vernon Benbow. The east wall, from the ground to a sufficient height above the altar has been painted in a diaper of green, with vermilion and black, and illuminated with gold crosses. This is finished above each end of the wall with a cresting of gold, surmounting the word "Alleluia." Immediately over the altar the words "I am the Bread of Life" are painted, the initial letters being adorned with representations of the vine, corn, and holly. A border of Passion-flowers runs round the text, and in either corner is an appropriate design. Other decorations, also, have been effected.

Llangollen.—Messrs. Roberts & Co., builders, have commenced to alter and enlarge the parish church, having contracted for the work. The plans have been made by Mr. S. P. Smith, architect, Shrewsbury. The church when enlarged will contain sittings for about 1,000 persons. The carved oak roof will be preserved, and it is said to be probable that no antique feature of the edifice will be demolished. About 2,000*l.* have been already contributed towards the work.

Aberdare.—With reference to St. Mary's Church, described on the 19th of November, we are authorised to state that the seats are stained and varnished; that the carving, which is not profuse, was executed by Mr. Whittingham; and that the contract was taken at 2,797*l.*; and in the building itself (which seats 700 adults), the extras, if any, can only be of trifling amount. This is exclusive of boundary walls and gates.

Liverpool.—St. Philip's Church, Hardman-street, has been formally re-opened. The improvements in the church include the reseating of both body and gallery with open benches, the repainting and colouring of the interior, the addition of several stops to the organ by Gray & Davidson, and several minor alterations. Two painted memorial windows have been made at the west end of the church, the windows being presented by the Rev. C. H. Barton, in memory of his children. Mr. Barton has also fitted up the baptistery at his own expense. The architect has been Mr. Grayson; the builders, Nicholson

& Eyre; the painters and decorators, Gardner & Son, of Duke-street; and the memorial windows have been designed by Mr. Forrest.

Slawston (*Leicestershire*).—The church of All Saints, Slawston, was, until recently, one of the most defaced and dilapidated churches in the county; but it has undergone a restoration, and has been re-opened for divine service. Before restoration the tower arch was also blocked up, and there was a gallery which projected as far as the south door, and which had a very unsightly and heavy appearance. This gallery has been removed and the tower arch opened. There was formerly a low dilapidated brick porch at the south door: this has been removed, and a bold arch erected, with a high-pitched roof. The chancel is entirely new or rebuilt, except the gable end. There is a new east window of Decorated design. The clerestory has been rebuilt, and a new south porch made. The new chancel is of the Early Decorated period, in keeping with the church. The fittings of the church consist of open seats, new roof, new reading-desk, lectern, and pulpit, all of deal. By the restoration, above thirty additional sittings are gained. Messrs. Goddard & Son, of Leicester, were the architects, and Messrs. Loveday, of Kibworth, and Mr. J. Stanyon, of Market Harborough, the contractors; the former doing the wood-work, the latter the stone.

Bromborough (*Cheshire*).—A new parish church for Bromborough, the foundation-stone of which was laid about two years ago, has been consecrated by the Bishop of Chester, and formally opened for divine service. The new building has been erected on a site adjoining the old parish church. Mr. C. K. Mannering, lord of the manor, gave an acre of land adjoining the old churchyard, a donation of upwards of 2,000*l.*, and agreed to provide red stone from a neighbouring quarry sufficient to build the church. The new church has been erected by Messrs. Holme & Nicol, of Liverpool, from the designs of Mr. Gilbert Scott, of London. The style is Early Gothic. The roof is of open timber, with the exception of the apse, which is close timbered, ribbed, and decorated. Some portions of the building are embellished by carving and decorations, and over the communion table is a memorial window. The interior comprises a nave, two aisles, chancel, vestry, and chapel. It is calculated to seat 600 persons. The cost of the building will be about 5,000*l.* It is intended to add a tower and spire.

Campfield (*Manchester*). — St. Matthew's Church, Campfield, has just been repaired and painted. In addition to the various improvements and decorations, there are two large painted glass windows, in the sides of the chancel. These windows were exhibited in the Kensington Museum, London, last summer. The windows are each composed of three lights or openings, and tracery. The central divisions of each window are filled with subjects illustrating incidents in the life of our Saviour; in one compartment, "Blessing little Children," in the other, the "Charge to Peter." The side openings, four in number, contain representations of the Evangelists, Matthew, Mark, Luke, and John, life size. The tracery is filled with ornamental forms, containing sacred emblems and monograms Agnus Dei, cup and vine, pelican, and emblems of the Trinity, with I.H.S., and "Alpha" and "Omega." The work was designed and executed by Messrs. Edmundson & Son, of Manchester, who also designed and executed a short time ago the central memorial window. It is composed of three lights, and contains representations of the "Ascension" (in the middle opening), the "Last Supper" and "Baptism," in the side divisions. The tracery is filled with a figure of our Lord in his sovereignty, and angels bearing scrolls with Scriptural texts. The organ has undergone a restoration, and several new stops have been added to the great and choir organ.

Roughton (*Norfolk*).—The parish church of St. Mary, Roughton, having in the course of the year undergone restoration, has been re-opened for Divine service. The roofs of the nave and aisles have been entirely renewed, partly in oak, and partly in fir, the original designs having been adhered to. The walls have been plastered throughout in a warm tint. The floors have been laid in red and blue 4-in. Staffordshire tiles, except within the communion-rails, where the floor is of Minton's encaustic tiles. The chancel arch has been rebuilt, and the stonework of the windows, arches, pillars, &c., cleaned and repaired. The aisle and clerestory windows have been glazed in a pale olive green, with a white border; and the tracery of the east window has been filled with stained glass by Hardman, of Birmingham, the lights being for the present fitted with quarries of tinted cathedral glass. The screen and all the chancel fittings are of oak, carved in light open tracery, in keeping with that of the windows. The pulpit is also of oak, carved, with a stone vase. The old high pews have been replaced by low open benches, with carved ends, which will afford seats for 216 persons, the accommodation being thus considerably increased. The whole of the work was committed to Mr. R. Cornish, builder, North Walsham.

Lakenham.—The new chancel of Lakenham church has been consecrated. The new chancel is twice the length of the old one, affording about seventy additional sittings. It is oblong in form, with an apsidal end, and is built of flint with stone dressings, finished with a traceried parapet. It contains in all nine windows—three at the end and the others on either side. They are in the Perpendicular style. One of the three end windows is already filled with stained glass, and the remainder, it is expected, will be similarly furnished by next Easter. Internally, it is finished with coloured stucco, with stone dressings and coloured arch stones. The light open timbered roof does not, strictly speaking, harmonise with the roof of the church itself. The cost, when the whole has been completed, will be about 1,000*l.*, including gifts. Mr. J. Brown, of Norwich, is the architect; and Mr. Worman, the builder.

Weybread (*Suffolk*).—The parishioners have decided upon restoring their church, at a cost of about 1,000*l.* Plans have been prepared by Mr. R. M. Phipson, architect; the contract has been taken by Mr. Grimwood, of Weybread; and the works will be commenced forthwith. The restoration consists of putting an entirely new roof to the nave, of the same design as the old one, which has become very rotten; repairing the two aisle roofs; benching the church throughout; building a new vestry and organ chamber; restoring the chancel; putting in new east window; laying the floors with Minton's encaustic tiles; and other repairs.

SCHOOL-BUILDING NEWS.

Bloxham. The new buildings added to All Saints' Middle School, Bloxham, have been opened. The building is situate on high ground, at the north end of Bloxham. The school was opened in January, 1860, with *one* boy: it now numbers over fifty boarders, besides day-boys, and it was to provide for the increasing numbers that it was found necessary to add the new buildings. A close of 5½ acres immediately adjoining the premises has also been recently added to the playground, and the school now stands on grounds of its own of more than 10 acres in extent. The new buildings have been executed by Mr. Thomas Barrett, of Bloxham, builder, from designs by Mr. G. E. Street, the diocesan architect.

Newport (*Monmouth*).—The building for the Ragged School has been opened. It is situate in Dock-street, at its junction with Mellon-street. It is a building of two stories, the design in the Gothic style; but owing to the restricted means at the disposal of the committee is necessarily plain in character. It consists of two school-rooms, capable of accommodating about 100 children each: the lowest room is for boys, and the upper room for girls. Each school-room measures 40 ft. by 21 ft. 6 in.; the boys' 12 ft. high, and the girls' room, being partially in the roof, is 15 ft. high. The buildings are of ballast-stone, faced towards Dock-street and Mellon-street with Bodmer's patent bricks. Freestone is sparingly used for dressings, and red bricks are introduced in the arches. The roof is covered with slates. The building has been erected by Mr. L. B. Moore, under the superintendence of the architect, Mr. Samuel Hancorn, of Newport, whose design was chosen in a competition among local architects.

Fladbury (*Worcestershire*).—The first stone of a new National School and master's house has been laid here. The school-room, designed to accommodate 120 children, will be 51 ft. in length by 19 ft. in width; the walls of red and black brick, with bands and dressings of stone. The style is Early Decorated. The architect is Mr. Preedy, of London; builder, Mr. J. Griffiths, Eldersfield.

Manchester. — The foundation-stone of St. Catherine's Schools, Newtown, has been laid. The architects are Messrs. Speakman & Charlesworth, of Manchester. The contract was taken by Messrs. Statham & Son, Pendleton, builders; and the estimated cost, according to the plans which have been approved by the Committee of Council on Education, inclusive of the school fittings and the extra cost of the excavations that will be entailed by the nature of the soil, is 1,900*l.* The building will be of Gothic design, of common red brick, interlaced with bands of blue bricks to give relief; and will accommodate about 800 children. The boys' and infant schools will be on the basement floor; the former being 42 ft. by 30 ft., and the latter 51 ft. 6 in. by 20 ft. There will be separate entrances to these, and also to the girls' schools, which are to be situate on the floor above. To each school will be attached class-rooms; and on each floor there will be lavatories and other conveniences. The girls' schools are to be divided by a moveable partition, which can be easily shifted, and the two converted into one large room, to be used for tea meetings and other public purposes. On the basement floor the requisite appliances for cooking will be supplied.

North Shields.—The additional Roman Catholic schools, in Nelson-street, North Shields, have been opened. The first school was built by the late Rev. Thomas Gillow, twenty-four years ago. It was capable of holding 200 children; but it has long been too small, and on the 26th of July last, the foundation of an additional building was laid. The new building is on the south side of the old one, and fronts into Cecil-street, having a good piece of playground in front. The architect was Mr. Thomas Gibson, North Shields; and Messrs. Honeyman & Son were the builders.

STAINED GLASS.

Gorton Church (*near Manchester*).—A stained-glass window has been erected in this church by Mrs. Grimshaw, of Woodland Bank, Stockport, to the memory of her late husband, Mr. Geo. Grimshaw. It is in one opening filled with rich borders and canopy work. The subject is the Raising of Lazarus, with the text, "Lazarus, come forth." An inscription running across the base of the window shows the object of its erection. The window was the work of Messrs. R. B. Edmundson & Son, of Manchester.

St. Thomas's Church, Oxford.—A window has just been erected in this church, to the memory of the late Mrs. Skene, of Frewen Hall. The window contains on the right light a figure of our Lord, as represented in Rev. ii. 12, standing between the seven candlesticks, and bearing the seven stars in His right hand; His feet resting upon an altar. This is intended to symbolize the Church Militant. In the other light, which represents the Church Triumphant, is the figure of a "Bride adorned for her husband" (Rev. xxi. 2), attended by angels, and bearing in her hands a picture of the new Jerusalem. The artists were Messrs. Clayton & Bell. The subject, we believe, was chosen to harmonise with the east window of the aisle to which it comes next, and it is hoped that eventually all the windows in this part of the church may be filled with a series of apocalyptic subjects.

Staindrop Church. The new memorial window to Henry second Duke of Cleveland, in the old church at Staindrop, is now finished. The stone-work was executed by Mr. D. Harworth. The window contains five lights, with tracery, under an elliptic arch, and is adorned with copies of the subjects which were in the same window in the year 1314. These have been discovered, through the exertions of the Rev. James Hodgson. The figure of the Saviour forms the centre light, and in the right are full-length representations of St. Ambrose and St. Jerome. The other two lights contain figures of St. Augustine and St. Gregory. On the upper part of the window are seven shields, bearing arms, and representing the shield of the Duke of Cleveland, Neville De Ros, and Dacre. The glass was supplied by Messrs. Clayton & Bell.

York Tea Church, Blackwater. — The east window of this church has this week been filled with stained glass. In the centre light is introduced the subject of the "Ascension;" in the dexter light, "Raising of Jairus's Daughter;" and in the sinister light, "Suffer little Children," &c. This window has been placed in the church by Captain E. A. Anderson, of the 18th (Royal Irish) regiment, in memory of his wife, who died 15th April, 1861, an inscription to this effect being inserted on the stone sill immediately under the window. The artists were Messrs. Heaton, Butler, & Bayne, of London.

WORKING MEN'S EXHIBITIONS.

EXHIBITIONS of the hand-work of the industrious classes appear likely, for some time to come, to prevail, both in the metropolis and in many of the provincial towns; it is, therefore, a matter of great importance to consider if the arrangements of these exhibitions are such as are best calculated to improve materially our art manufactures. Take, for instance, the recent collection in the Agricultural Hall, Islington, and let us—while admiring the motives which caused it to be brought together and praising much that it contained -glance at the effect which this exhibition was likely to produce on the exhibitors and visitors.

In many departments there were remarkable displays of ingenuity and patience, and most of these were effected in a line of work to which the authors had not been regularly educated; moreover it was to be noticed that there were not many works of invention shown which will be of eminent usefulness: this may have been in part caused by fear on the part of inventors that their plans might be taken up without proper care for the discoverers, and in some cases there would be a want of inclination or means to defray the charges of the Patent Office. For the full success of such expositions as this, and even in connexion with the greater gatherings of the world's industry, changes in the law of patents and the registration of designs are needed. It proceeded, however, more especially from the fact that people are rather prone to dabble in attempts to show their skill in other ways, than to strive for perfection in their own especial branch.

In certain instances a versatility of talent has advantages, and leads at times to important results. It may be shown how ship-carpenters, joiners, sailors, and blacksmiths, have become skilled painters, and some who have "whistled at the plough," famous men of science, poets, and philosophers. These instances are encouraging, but it should be remembered that they are but few in number, even in the course of a century. Gladly should we hear that the Islington exhibition had been the means of directing the attention of some to a more brilliant and valued kind of labour than that on which they had been previously engaged; but it seems to the writer that a chief aim of such meetings as this has been too much overlooked. Many would have liked to see architectural carvers in stone and wood striving, in their leisure hours, to produce the very best work they could, in both design and execution, and not branching into other directions, and showing at the best but indifferent attempts; and it would have been more useful if the makers of musical instruments had devoted the strength of their ability to productions of that kind instead of to carvings in wood and stone. It is not our wish, in the few remarks here made, to throw damp on such gatherings which, besides many other advantages, are the means of bringing various classes together; but with an earnest wish to get the ingenious into a right working channel, we throw out this hint—to the young men especially who are engaged in artistic and skilled manufactures, —and urge them to produce good work in their particular crafts. A year or more will elapse before there will be another exhibition of this kind in North London. There are the long nights of winter coming, when they might be thinking over their intentions. Let those who are engaged in branches where design is needed, avail themselves of the artistic books in the Mechanics' Institutions, or in the schools for art instruction, in various parts of the metropolis available, or in the Kensington Museum, and then let them see what they can do in their own way. If this course be followed, we predict an exhibition on another occasion of quite as much general interest as the last, and of far more utility.

It should be one of the chief advantages afforded by such exhibitions, that those who are beginning life in various paths should be able to show examples of their ingenuity and work, and that employers of labour should go there with a practical intention.

On Wednesday evening last a meeting was held at Allen's Riding-school, Bryanston-square, for the purpose of affording information and obtaining support for a proposed scheme of a working men's industrial exhibition for Marylebone. The Right Hon. W. Cowper occupied the chair, and opened the business of the evening. The meeting was also addressed by the Rev. Eardley Wilmot, who represented the central committee for carrying out the exhibition, and he explained the opening of the undertaking, and the means by which they proposed to carry it into effect. The following resolution was adopted:—"That this meeting cordially approves the proposed Working Men's Industrial Exhibition for the borough of Marylebone, and pledges itself to use every exertion to make it a success." A district committee was subsequently appointed, and arrangements were made for providing a guarantee fund to meet the necessary expenses.

SANITARY STATE OF TOWNS.

As we predicted in the course of the extraordinarily dry summer, the health of the community is now suffering from a very general prevalence of fevers. Of course, where such diseases normally prevail, the evil shows itself in an increase, though not in an origination, of the fever.

Such is the state of some parts of Liverpool, that the Privy Council have sent down Dr. Buchanan, one of the physicians to the London Fever Hospital, to investigate the matter. In their letter to the local authorities, their lordships state that "they find from documents which, at their request, have been supplied by the Worshipful the Mayor of Liverpool, that epidemic fever has, for a very considerable period, been prevailing in that borough; that for two years past the fever deaths have been, in proportion to population, more than have occurred in any town in England, so far as their lordships are aware, since the famine fever of 1847; that within the last few weeks this already excessive mortality has all but doubled its weekly average; and that there is reason to fear, as winter approaches, a still further extension of the disease. Their lordships consider it of great public consequence that the causes and circumstances of so serious an epidemic should be thoroughly investigated, and that nothing should be left undone which can be done to prevent its further ravages." The inspector has been very politely received, the parish and union authorities having resolved to facilitate his inquiries in every way.

At Lincoln, it is said that fevers and small-pox prevail in all parts of the city. A correspondent of the local *Chronicle* says on this subject,—"The Local Government Act is imperatively required; and although in the present peculiar stage of the sewage question it would not be advisable to decide upon any definite system, yet we ought to be in a position to avail ourselves of its powers, and act upon them without delay, for it is life or death. Our present pretence of drainage could not be worse, and in no village of savage Africa, or town in Germany, is there such carelessness and filthy unconcern, such wanton neglect and suicidal wastefulness, as is to be found in this city."

At Canterbury scarlet fever is very prevalent. Some families have lost three or four children, and in almost every street half-closed shops are to be seen. As many as ninety cases of fever are reported to have occurred in one parish within a short period, and the epidemic appears to be rather on the increase than otherwise.

SANITARY STATE OF MARYLEBONE.

THE monthly report of the health and climate of St. Marylebone, during July, August, September, and October, 1864, by Mr. John Whitmore, M.D., the new medical officer of health for the district, has been printed by order of the vestry. From this report it appears that the total deaths in the parish from all causes during July, August, September, and October, amounted respectively to 330, 288, 295, 319, which were less in the aggregate by 19 than those of the corresponding months of the year 1863. The deaths from diarrhœa for the same period amounted to 126, of which no less than 112 were amongst infants and children, under the age of five years, whilst the returns from eleven charitable institutions in the parish give the large number of 4,335 cases under treatment for the same complaint. Diseases of the zymotic class generally have ranged high during the past four months: 316 persons have died from them, of whom small-pox destroyed 5, measles 30, scarlatina 43, and typhus and typhoid fever 33. "In former years," remarks the reporter, "the mortality and sickness in London and other large cities and towns, were highest in the summer months, arising principally from the prevalence of fevers and other diseases of this class; but the legislative enactments of late years, in regard to sanitary measures, have effected a great change, and we now find that the highest mortality prevails in winter. Still, the ravages from what may be termed preventible diseases in this parish are so obvious, as shown in the figures here quoted, that, beyond the facts before us, little else is needed to stimulate all who are engaged,—officially or otherwise, to persevere in the work of social and sanitary improvement."

THE MOSQUE AT HEBRON.

To get rid of a standing argument against some of his expressed opinions, Mr. James Fergusson has been to Syria; and, asone result, has given in the *Times* an account of his visit under fortunate circumstances to the long-hidden sanctuary at Hebron. We repeat his description of the mosque:—

"The first glance of the court-yard on entering is certainly disappointing. It is surrounded on three sides by low buildings, wholly destitute of architectural ornament, and without even a respectable moulding. Externally they are of stone; but internally the walls and roofs are plastered and whitewashed.

In two very small chambers in these buildings are placed the cenotaphs of Abraham and Sarah. The real tombs,—if they exist,—are of course in the cave below the floor. Those which are shown are covered with curtains of silk, green and red respectively, richly embroidered with gold. They are however, very much faded, and never could have been either so rich or so beautiful in design as that which covers the tomb of Neby Daoud at Jerusalem. Like the building which covers them, and all those which surround the court, the cenotaphs were placed there by Nazivel Malik ibn Kalaoun, the Sultan of Egypt, in 732 Hegira, A.D. 1331.

Having satisfied myself regarding these, I at last crossed the threshold of the mosque, and a few seconds sufficed to reveal its history. It is a Crusaders' church, built after the 6th crusade, A.D. 1228. The clustered piers,—there are twelve shafts to each, -and the form of the vault of the roof preclude the idea of its belonging to the first kingdom of Jerusalem. If we take 1250 as a mean date, it cannot be many years from that either way. The length from the door to the altar is 70 ft.; the width across, 97 ft. It consists of a nave with a clerestory, supported by three very irregularly-spaced pointed arches; and beyond the nave, on either hand, a low aisle, the outer wall of which is identical with the old Jewish wall of the harem. The roof is a pointed vault of intersecting arches, of the form universally prevalent in Italy in the thirteenth century.

The most beautiful thing in the mosque is the pulpit. According to a Cufic inscription on it, it was originally made for a mosque at Askalon, and finished in A.H. 484, A.D. 1091,* and tradition says was brought here by Saladin. There is a similar pulpit in the Aksa at Jerusalem, nearly a century later in date, and neither so elaborate nor elegant as this, which is without exception the most beautiful specimen of wood-carving I am acquainted with. It also interested me to find that both these were in the same style as the cathedral gates made about the same time for the tomb of Mahmoud, of Ghuznee, which Lord Ellenborough brought away in triumph under the mistaken notion that they had once belonged to the temple at Somnath."

"On the north side of the court are two small apartments containing the cenotaphs of Jacob and Leah. They are of the same style as the other buildings of Ibn Kalaoun, with this difference, that there are two small domes on the range of buildings which contain them, which are the only domes in the place."

"When I had completed my notes, and my pulse had become steady after the excitement of the morning, I turned to an old cavass, who was smoking in the passage, and expressed a desire to go and visit the city. He readily agreed to accompany me, and preceded by him, and followed by my own servant and a horse-keeper, I sallied forth."

"When I reached the mosque I was allowed to examine and measure all the accessible parts, not only without obstruction, but without being annoyed by pressing curiosity. The conclusion I arrived at from this part of my survey was

* I am indebted to the extracts from Mahomedan authors, contained in a *brochure* published by Dr. Rosen, the Prussian consul at Jerusalem, for several of these dates. They are amply confirmed by the architecture.

that the outside wall is undoubtedly Herodian of the same age, indeed, as the Wailing-place of the Jews and other portions of the substructure of Herod's Temple. Here, however, the stone is better and more uniform in texture than at Jerusalem, and consequently better preserved; but there does not seem a shadow of reason for supposing that the Jews ever erected such a building before the Romans infected them with their megalithic propensities."

Mr. Fergusson tells us that his examination of the localities at Jerusalem was tolerably exhaustive, and he has come back more confirmed than before in the correctness of all he has written or said with regard to the Holy Places. He has nothing to unsay and very little to add.

THE BUILDERS' BENEVOLENT INSTITUTION.

On Thursday, the 24th ult., a general meeting of the friends and subscribers of this charitable institution was held at the London Tavern, Bishopsgate-street, to elect three pensioners (two males and one female) on the funds of the Society. Owing to the absence of Mr. Thomas C. Lucas, the president, through indisposition, Mr. Joseph Bird was unanimously voted to the chair. Among the gentlemen present were Messrs. Plucknett, Dines, Hutcheons, Phillips, Ebbs, jun., Joseph Bird, W. Todd, G. M. Hall, R. Richardson, G. Head, J. R. Head, Hubbock, J. G. Howard, G. Hibberd, &c. &c.

The Chairman in opening the proceedings, said they had assembled for the purpose of electing three additional pensioners upon their funds, and regretted that they were unable to elect more of the candidates who then presented themselves, they already having thirty-six recipients of the benefits of the institution. He would not further detain the meeting, but at once declare the poll open.

On the return of the scrutineers, Messrs. Cozens and Stirling, after the close of the poll,

The Chairman announced the following as the successful candidates:—

George Merrion, aged 70, of Hoxton, who had suffered from losses in trade, and was greatly afflicted with gout, which rendered him unable to work for his living.

J. S. Wilson, aged 71, of Kingston-on-Thames, who was unable to earn his living through rheumatism. He had been ten years a subscriber to the Institution.

Clarissa Smith, aged 70, widow of the late George Smith, builder, of Puttenham, near Guildford, Surrey. She is blind, and had no means of support but what she received from her relations.

The Chairman, in allusion to those candidates who had on that occasion been unsuccessful, said that through the energy and kindness of their president, Thomas C. Lucas, esq., the donations at their last annual dinner had exceeded any former year, and he therefore had little doubt, but that in May next there would be another election. He found that at this election there were a great number of votes unrecorded, amounting to some thousands, and it was, therefore, necessary that a little more exertion should be used on the part of the candidates to ensure a return.

Some votes of thanks closed the proceedings.

ISLINGTON INSTITUTIONS.

The profit, about 1,110*l.*, which has arisen from the Industrial Exhibition in Islington, is a satisfactory fact, and shows that by means such as this funds may at times be raised which might be devoted to the foundation of establishments which will be of permanent advantage to the working classes. It has been suggested that a part of this sum should be applied to assisting in the erection of a school of art. In Islington, notwithstanding the general intelligence and well-doing of the inhabitants, there has been comparatively little done to promote the welfare of the poorer part of the community. There are no public baths and washhouses in this large parish: there is no public library, where, even by payment, working men may procure books. It would surely be an easy matter to establish a free library there—similar to that in Manchester—and a portion of the fund arising from the exhibition might be usefully put towards the building of a place for this purpose, which might be erected by voluntary subscriptions, and then, if this were done, a rate of about a halfpenny in the pound per annum on the rental would serve to keep up and extend the library. It is worth consideration if it be not possible to have in a building, in some central situation, accommodation for a free library, a school of art, and a hall for popular lectures. The advantage of such an arrangement would be great; but, unfortunately, in the metropolitan parishes, there is a want of that spirit of emulation respecting public institutions which exists between towns. If we could but get that concentrated attention to these matters, in Islington, St. Pancras, Marylebone, and so on, which is paid by business men in Manchester, most satisfactory results would be the consequence.

THE CAB FARE ACROSS HYDE PARK.

Some cabmen, it seems, still choose to assert their right, when they take a fare through Hyde Park, going, say from Chelsea to Hyde Park Gardens, to charge as if they had travelled round by Park lane. They should be warned in time that they have not this right. We have before us a correspondence between Mr. S. Lahee and Lieut.-col. Paschal, on the part of Sir R. Mayne, ranging from May 20, 1863, to the 20th of October, 1864, during the whole of which long time Sir Richard was promising that measurements should be taken, and the tables of fares revised to meet this difficulty. On that last date Col. Paschal informs his correspondent, that "a table of distances and fares across Hyde Park to points on the north side has been fixed at the standing near Queen's-gate, Kensington, and that another is ready to be fixed at the standing near Hyde Park Gardens, giving the same information to points on the south side." Mr. Lahee naturally asks whether these will be deemed sufficient notice to *all* cab-drivers, and whether all cab-fares, shortened by the new road, whether from these stations or not, will be affected by them; and he can get only the unsatisfactory reply that the magistrates must decide when any case is brought before them! Surely we ought to have the matter put at once on a better footing than this.

SUBMARINE AND OTHER FOUNDATIONS

An arrangement proposed by Captain Heathorn, R.A., has for its object improvements in the construction of foundations in deep water, under the circumstances of a level, shelving, or sloping bottom of a varying density, possibly covered with mud, or shingle.

His method of constructing the foundations for such structures upon a level bottom is as follows:—A caisson of annular construction, but so shaped as to give the space it encloses a conical form, is made of sheet-iron: the bottom portion is floated out to sea exactly over the spot upon which the building is to be erected, and there anchored: concrete is then placed in the caisson, so as to cause it to sink equally; and as soon as it is sufficiently deep in the water, an additional height of the caisson is fixed, and more concrete placed therein to sink it deeper. This operation continues until a firm foundation is obtained by the weight of the caisson, with its interior filling of concrete causing it to sink through the mud or other soft ground to the hard ground beneath. The interior is then filled up with stone or concrete, upon which, and the concrete in the caisson, the superstructure is erected. For shelving or sloping bottoms the caisson will bear only upon the highest side of the same, and to preserve the perpendicular of the caisson, immediately it touches the hard ground stones are placed in the interior of the caisson, which will naturally settle themselves in such position as to form a wall underneath that portion of the caisson which does not touch the hard ground, thereby forming a foundation upon which the caisson may rest.

"MEND YOUR WAYS."

A correspondent writes,—"Nothing can be more desirable than your suggestions on this subject in your last number; but will you kindly consider the situation of hundreds of occupants of houses of moderate and small size in many of our streets, in which there is *no male resident*, or, if there be any, their duties as clerks in offices and shops quite prevent them from handling the broom and shovel daily. Surely it would be far better that the duty should be performed by the *parishes*, and a *small* rate levied for the purpose."

Of course, we do not contemplate occupants handling the broom themselves. There are plenty of unemployed boys to be found.

METROPOLITAN BOARD OF WORKS.

THE CHARGES AGAINST THE BOARD.

At the last weekly meeting of the Board, Mr. Freeman called attention to the evidence respecting the Board given before Lord R. Montagu's committee, and to the statements made in public vestries relating thereto. He complained that charges had been made against the Board, not only of want of wisdom and discretion, but actually of conduct that was not honourable. These charges were made before a committee of the House of Commons, certified by two members of the Board, taken up by some men of mark in various vestries, and thrown broadcast over the whole length and breadth of the metropolis. That showed the necessity for inquiry by the Board, for the purpose of giving to the public the most calm and dispassionate answer they could furnish. If they remained longer silent they would be unjust to themselves, to those who sent them there, and to the principle of local self-government, which they were supposed to represent. He denied that the Board had acted unjustly, or that they had squandered the public money. He thought the time had come when a committee should inquire into the matter, and send forth to the public an answer that would show whether they had done injustice. He moved, "That the evidence and reported statements before Lord Robert Montagu's committee be referred to the Main Drainage Committee for consideration and report."

Some discussion arose on this motion, and the previous question was moved; but the amendment was negatived by a majority of 22 to 10, and the motion was carried by a majority of the same number.

There was no escape from this inquiry, as we said not long ago.

PLYMOUTH.

A correspondent informs us that, among other local improvements, a terrace of seven first-class houses is being erected on a field adjoining the Esplanade, and fronting the Hoe. A main street has been constructed through the property direct to, and with an entrance for foot-passengers on, the Hoe; thus affording a direct approach to this much-to-be-admired public promenade from the west end of the town. The land for the terrace was purchased some time since by Messrs. Call & Pethick, contractors, of Plymouth; and the houses are being built in accordance with designs supplied by Mr. W. H. Reid, architect, the surveyor to the estate. The outlay will not be less than 20,000*l.*; and as the object of all parties concerned is to supply the long-felt want of superior houses with accommodation for large establishments, it is to be hoped the views of the promoters will be fully realized. It was originally intended to restrict the terrace to private residences; but an offer having been received from the committee of the Royal Western Yacht Club, to purchase one house for the use of the club, the restriction was withdrawn. The architect for the internal arrangement of the club-house is Mr. O. C. Arthur; and, although the original elevations, prepared by Mr. Reid, have been subjected to some modification, consequent on the difference in plan, the architecture of the terrace remains unaltered.

STRIKES AND COMMERCIAL COMPANIES.

At the opening meeting of the Society of Arts, the Chairman of the Council in his address, said:—

In connexion with the progress of our manufactures and the prosperity of the working classes, the Society has also given its attention to the question of strikes, the existence of which in the aggravated form lately exhibited in Staffordshire, notwithstanding the great improvement which has taken place in the education of the people, proves that something is still wanting to afford them individually and collectively a true knowledge of their own interests. This subject will, I hope, be again brought before the Society during the coming session. It appears to me that the legislation of the last two years, with regard to commercial and manufacturing companies, opens to working men an entirely new relationship to their employers, which requires much consideration and the special attention of those who direct the education of their children. The large number of industrial establishments hitherto entirely under the control of

individuals, but which have recently been formed into joint-stock companies, with limited liability, will I hope be the means of gradually preventing the recurrence of those differences between the employers and the employed which have been prolific in causing mischievous combinations of workmen, and led them to follow the *dictum* of self-constituted committees, whose object appears to be the attainment of irresponsible authority over their fellow-workmen, rather than the real and permanent welfare of the class to which they pretend to belong. Hitherto the workmen have seen their employers accumulate vast capital, increase and extend their works, and live in almost princely style, upon profits derived in a great degree from their constant toil, and the intelligent exercise of their labour; whilst their own position, from the day they commenced life to their maturer years, has scarcely been improved. They still live in the same ill-ventilated, incommodious, ill-drained houses, in which it is almost impossible for them to maintain their families in health or decency; and perhaps, with the exception of obtaining better education for their children than they could get themselves when children, they are relatively in a worse social condition than their fathers were before them. Such facts, apparent to all, afford to the demagogue ample means and opportunity of exciting feelings of jealousy and distrust between workmen and their employers. Rightly or wrongly, they look at the one practical result, that the employers of labour year by year improve their social condition, whilst they see no prospect whatever of any similar advantage being enjoyed by themselves. Under the law of 1862, the great manufacturing and trading companies recently organized must prepare properly authenticated balance-sheets, and thereby enable the workmen to know the exact results of their labour to their employers. Should these results be highly remunerative, and large profits be realized by the union of the capital and intelligence of the master and the skilled labour of the men employed, it will, I think, be difficult for the directors of such companies to avoid considering in what manner they can distribute amongst all connected with such establishments some proportion of the profits obtained. At all events, it will afford fair ground and ample knowledge upon which the workmen can press their claims before the directors, who, if they cannot meet them by reason and sound argument, will subject themselves to an amount of disaffection among their men which must ultimately end in the workmen endeavouring to enforce their reasonable requests by declining to work for such employers.

THE SCALE OF ARCHITECTS' CHARGES.

SIR,—I was sorry to see in the opening address of the president of the Institute some incorrect statements respecting "scales of charges." Mr. Donaldson says,—

"I have observed with regret that some of the provincial societies, instead of strengthening their own position and that of the profession generally by accepting in its integrity the scale of professional charges adopted, after the most painstaking and deliberate investigation, by this Institute, have sought to publish a distinct scale of their own, founded generally upon that of the Institute, without acknowledgment, and introducing modifications of purely a local nature. This is a sad mistake. . . . . The provincial table, deprived of the sanction of the great central body, and resting only upon the authority of a limited circle of professional men, cannot have the same weight as the code of the Institute."

Now here, sir, is a remarkable series of errors, which in the interest of truth and in justice to the "provincial societies," I wish to point out in as few words as possible.

1. The only scale of charges published by "a limited circle of professional men," is the scale published by the Northern Architectural Association; and as it was published October 18, 1861, before the Institute scale (January 27, 1862), it cannot be "founded generally upon that of the Institute without acknowledgment."

2. If Mr. Donaldson means the scale drawn up by the Architectural Alliance, July, 1863, it was not published at all, but only circulated among the members of the Alliance, "with a request that they will consider the same, and return it to the secretary of the Alliance with any alterations they propose."

3. The only scale "published," "on the basis of the Institute scale," is the one published by the Alliance after their annual meeting, July last; and this is not "without acknowledgment," for it is headed "Scale," &c., "as confirmed at the special general meeting of the *Royal Institute of British Architects*, held 13th and 27th of January, 1862, and *adopted by the Architectural Alliance*, at the annual meeting, July 6, 1864, with the appended note."

The Provincial Societies, therefore, instead of undermining the influence of the scale, as Mr. Donaldson asserts, have added *immensely* to its influence, as the Alliance which comprises them does not consist of a "limited circle of professional men," but numbers 850 members, from every part of the kingdom; whereas the Institute numbers, of all classes of "Fellows," "Associates," "honorary and foreign members," "students," and "visitors," only 502.

I may here take the opportunity of correcting the impression which some of the great men in the Institute have, that the Alliance is a *rival* to the Institute: it is no such thing. All the officers of the Alliance are also Fellows of the Institute, and have, since the Alliance was established, obtained from among its members many Fellows and Associates for the Institute. The Alliance is established to *supplement* the Institute, and do work which, by its exclusive constitution, the Institute cannot do.

The Institute has this year admitted that its country members should have some share in its government, and have decided that two of its council shall be elected from among its country members. Let them extend the principle to its legitimate extent, and elect on the council members from the country in proportion to the number of country members, and allow them to vote by proxy, and I, as one of the promoters and officers of the Alliance, should be happy to see the Alliance delegates merge into the Institute council.

J. P. PRITCHETT.

TO CLEAN CROOKED FLUES.

YOUR correspondent, "An Old J.P. and D.L.," would probably find, as I have done, in old houses, great advantage in cleaning his flues by having a machine of his own, constructed with an iron wheel, to assist the same over flat "gathers," but worked from the top instead of the bottom, a heavy iron bull and rope being first let down, and the machine worked up and down by a man at the top and another at the bottom, a rope being, of course, substituted for the usual rods. Your correspondent might first try the effect of this with a branch of holly and a 14 lb. weight, the holly being a far better sweeper than the whalebone machine. Soot-doors, of course, would dispense with the need of this; but if the gathers are flat where passing through rooms, they are very unsightly; but, generally speaking, a soot-door in the roof will enable the sweep to clean any flue, only sometimes he leaves it open. The machine and rods, even if they get round a flat gather, generally bind tight on the top surface, and do little good to the bottom. Instead of sweeping the flues every "four or five weeks," I think that they must be bad indeed, or pinched somewhere, if "holly-bushing" them once a year will not keep them clean. Probably the mortar dropped from the top when building them now lies on the gathers; and the boys who may have been sent up to clean the same when the house was just finished dared not, I know, force the mortar past themselves, for fear of being wedged by it at the waist. The holly-bush will remove this.

A YOUNG ARCHITECT.

MUSIC PICTURES.

IT gives me great pleasure to see you have found space to call attention to the above subject, in which there is so much room for improvement; for if a piece of music is worth illustrating, it is surely worth illustrating well—a thing, I am sorry to say, rarely done, the generality of studies one sees in the windows of music-vendors being in all points bad, very bad: it is lithographically bad, the drawing is bad, and the colouring in many instances worse. The best specimens appear to be those in which there is nothing but the title, in colours, perhaps, sometimes with illuminated capitals; but this kind is seldom met with. There are, perhaps, few things in which worse taste is shown than in this same music illustration. What, for instance, can be worse than this: a scene from a play or opera is depicted, and across this—diagonally, perhaps—is written, in large characters and vivid colours, the title of the piece. This kind may be nearly always seen. Surely, in this age of chromolithography, the cost of good drawing would be very little more than that of the rubbish now published; but I am afraid the publishers will not pay that little while they have critics no more severe than the generality of music purchasers are likely to be; so that if through the medium of your valuable publication a better state of things could be arrived at, it would be another case to swell the list of those in which you have been the means of bringing about a lasting improvement.

The only objection I find it possible to make to your article is, that it is not half so severe as it might have been; but you are, doubtless, wishful to exercise a Christian forbearance when called upon to point out any crying evil; so tempering justice with mercy. E. W.

NORTHERN ARCHITECTURAL ASSOCIATION.

AN ordinary meeting of this Association was held on the 22nd ult., in Newcastle-upon-Tyne, Mr. Pritchett, V.P., in the chair. The chairman briefly stated the proceedings that took place at the last meeting of the Architectural Alliance. Some time had been occupied at the meeting with fixing the scale of charges, but it was also agreed that no architect should be considered as having infringed the rules of the Association, though his charges might not be exactly the same as those that they had agreed upon. The Nottingham Association was received into the Alliance. The meeting then proceeded to the election of the office-bearers for the ensuing year as follows:—President, Mr. Dobson; vice-president, Mr. F. R. Wilson; honorary treasurer, Mr. Johnson; honorary secretary, Mr. Oliver; honorary solicitor, Mr. G. W. Hodge; committee, Messrs. Howison, Dunn, Moore, Pritchett, and Peachey. It was then resolved that the Association at present suppress its own scale of charges, and that the charges recommended by the Institute be used in the mean time. Mr. Oliver read a paper on "Ventilation," for which thanks were voted.

COMPETITIONS.

Tenterden.—The Local Board of Health, having taken the opinion of a consulting engineer upon the plans, sent in competition some months ago, for the drainage and water-supply of this town, have selected those submitted by Mr. Benest, of Norwich, and have awarded him the premium.

RATING PROPERTY.

RIGHT TO DEDUCT SEWERS RATE.

IN the case, Hall Dare *v.* The Overseers of Wennington, Essex, the question relating to the right of deducting sewers taxes from the rateable value of premises occupied by the owner, is considered of general importance in cases of rating. We, therefore, give a report of the judgment of one of the Judges, which sets forth the legal grounds of the judgment in favour of the appellant, and allowing the deduction.

Mr. Justice Shee said,—I am of the same opinion as the other members of the Court—in favour of the appeal. The appellant, who is the owner and occupier of 400 acres of land in the parish of Wennington, has been rated for them on an estimate of their value, in which no account has been taken of the annual charges to which they are subject in respect of the sewers rate; and the question is whether he is not entitled to have the estimate reduced by the amount of those charges. This brings us to the construction of the 6th and 7th William IV., cap. 96,—the Act to regulate parochial assessments, by the first section of which it is provided that the rate shall be made upon an estimate of the net annual value (*i.e.*, the value above all charges) of the hereditament—that is to say, of the rent at which the same might reasonably be expected to let from year to year, free of—*i.e.*, disregarding, or without taking into account—usual tenant's rates and taxes and tithe commutation rent-charge, if any, and, *&c.*, but deducting therefrom—that is, from the net annual value or rent, as before explained—the average annual cost of repairs which fall upon the landlord, unless under express contract between him and the tenant the tenant is to bear it; insurance, which also falls upon the landlord, and other expenses—*&c.*, as I read it, outlay on the premises necessary to maintain them in a state to command—that is, to be worth—such rent. The scheme of the Act is to ascertain the net annual value of the hereditament, whether let to a tenant or not, as a basis of the assessment, and to deduct from that net annual value the average annual cost of repairs, insurance, and landlord's outlay to keep the hereditament up to that net annual value. "Rex *v.* Adams" (1 *B. & Adol.*). On these grounds I am of opinion in favour of the appellant.

DEATH FROM LEAD POISONING.

A CORONER'S inquest has been held on the body of a woman who had been employed at a white-lead factory in Limehouse for four months. When first engaged she was in good health, but she soon became ill. Her joints became weak, her teeth turned black, and she got palsied. She then was unable to work all the days of the week, and at length could not go to the factory at all. She was then seized with violent convulsions, and died. One witness said there were about twenty females employed at the factory. The hours were generally from six to six; but sometimes there was overtime, and they worked till nine, or even eleven o'clock at night. The females employed were for the most part young, but one person had been ten and another fifteen years in the factory.

A juror said that he knew numbers of healthy young women who were completely poisoned and "used up" in three or four years in white-

lead factories. A few only became acclimatised to the poisonous atmosphere.

Dr. Arnold said that he told deceased, while ill, that she was suffering from lead poisoning, and that her death was inevitable unless she gave up her work at the factory. She said that she had an aged mother to support as well as herself, and that she had no choice but to go to the factory or starve. Her death resulted from lead poisoning, accelerated by want of food. Doubtless she was rendered unable to take or eat sufficient food by the state of her teeth and gums, &c. from the poisoning of the blood. Some constitutions gave way under the action of the lead poisoning much sooner than others.

The jury returned a verdict "That the deceased died from the poison of white-lead, and that her death was accelerated through want of food, which the action of the poison rendered it difficult for her to take; and the jury are of opinion that, considering the deadly nature of the occupation, the hours of employment in white-lead factories are too long; and also that it would be desirable that there should be a systematic inspection of such establishments by a Government officer."

IRELAND.

Dublin.—The new Presbyterian church in Rutland-square has been opened. The edifice is in the Early English style, and occupies a frontage in Rutland-square of 62 ft., and measures from front rear, in North Frederick-street, a depth of 160 ft. The stronger portions of the building are constructed of Dalkey granite, and the ornamental columns, &c., of Portland stone. The quoins of the spire, which is octagonal, are constructed of Portland stone, and carved. The tower is pinnacled. It contains two-light windows, fitted in with slate louvres. The turret is about 100 ft. high, and the spire rises to a height of 180 ft. in all. Entering the church the vestibule is first reached. It is lighted by a stained-glass window in front. The flooring is of encaustic tiling. From the left a staircase leads to the gallery, which is fitted up to accommodate about 100 persons. Above it is a memorial window. It has six lights, and is filled in with stained glass. Gothic tracery fills the upper, and various texts and an inscription are depicted on the lower portion. The first, third, fourth, and sixth lights have a number of the beatitudes inscribed on them, and texts. Running along the lower part of the window, inscribed in coloured old English characters, is the line:—"This window was erected by the congregation of Mary's Abbey, to commemorate the munificence and perpetuate the name of Alexander Findlater, the founder and donor of this church." Mr. Ballantine, of Edinburgh, was the artist. From the vestibule doors open into each of the two aisles of the church, with their rows of pews on each side, capable of accommodating about 900 persons. The pews are constructed of red deal, stained and polished in imitation of oak, and each is ornamented in a *fleur-de-lis* end, differing alternately. The roof, which is about 80 ft. high, is groined in wood, and formed by numerous diagonal beams intersecting and resting upon pillars of Caen stone in groups of columns. A rose window, nearly 19 ft. in diameter, the work of Mr. Ballantine, is placed directly over the pulpit. Three stained-glass five-light windows are placed along the right side of the church; but there are none to the left, the existence of a building outside effectually preventing such a desideratum. Hot-air pipes are run along under the flooring of the building, and perforated plates above them, for heating purposes. Messrs. Edmundson & Co., of Dublin, have erected the gas-fittings. They consist of a series of coronas of polished brass, with thirty lights each. Below the church is an extensive school-room, 62 ft. long by 52 ft. wide, and at the farther end is a suite of rooms, including a large apartment for congregational purposes, with session and minister's rooms. Mr. A. Heiton, of Perth, was the architect; and Mr. Bolton, of Dublin, the builder. The estimated cost was 10,800*l.*; but the final cost has been upwards of 16,000*l.*, the whole of which has been defrayed by Mr. A. Findlater, of Dublin.

Iron Bridges for Servia.—Prince Couza has granted to an English company the concession for the construction of six iron bridges over the principal rivers in Servia. They are to be completed in three years.

RECENT PATENTS CONNECTED WITH BUILDING.*

Improvements applicable to Chimney-Tops and Ventilators.—*G. F. Chantrell & J. Reymond.* Dated 18th March, 1864.—The objects of this invention are to obtain an upward current in flues, and to prevent down-draughts therein; and a convenient mode of manufacturing the said chimney-tops and ventilators from clay, terra-cotta, and plastic or other material usually formed in moulds. A chimney-top or ventilator, constructed according to this invention, may consist of an octagonal, circular, square, or other suitably-shaped vertical hollow shaft, which the patentees prefer to enlarge at the base, and from near the bottom of which are formed three, four, or more air-passages, which extend obliquely upwards from the exterior of the base of the shaft, and open into the interior thereof at about say one-fourth the height of the shaft. The upper portion of the shaft they surround by a casing of larger internal area than the exterior of the shaft, and which tapers upwards, and is domed or otherwise contracted at the top above the main vertical shaft, to have an internal opening of equal or nearly equal area to the opening of the shaft. This outer casing they divide internally into eight, or any other convenient number, of vertical passages, by means of vertical diaphragms or partitions; these air-passages are open at the bottom, and extend above the edge of the vertical shaft within the same, or contracted head of the casing. The upper edge of the casing they surmount with a spiked or other suitable circlet.

Producing and Burning Combustible Gases for Heating and Lighting Purposes.—*F. J. Arnoldt.* A communication. Dated 19th February, 1864.—This invention consists, first, in constructing apparatus for producing combustible gases for heating or lighting purposes, of an upper and lower chamber in close contiguity, heated in any suitable manner, in the lower one of which chambers steam is decomposed by being made to pass through highly heated substances, with which the oxygen of the steam combines, while the liberated hydrogen is made to pass into the upper chamber, there to combine with carbonaceous gases resulting from the volatilisation of oil or liquid hydrocarbons introduced into such upper chamber, and whence the resulting combustible gases are conducted through one or more pipes either to burners situate below and serving to heat the apparatus, or to wherever required. Secondly, in the arrangement of apparatus for producing and burning combustible gases, as described.

A Machine to Press Bricks.—*A. Julienne & J. C. De la Combe.* Dated 25th February, 1864.—This invention cannot be described without reference to the drawings.

Artificial Stone.—*F. Ransome.* Dated 27th February, 1864.—Artificial stone has been manufactured by the present patentee by compounding sand and similar substances with soluble silicate of soda or potash, and then converting the soluble into an insoluble silicate by means of a solution of chloride of calcium, or other soluble salts capable of similarly acting on the soluble silicate. The chloride of calcium or other salt thus employed remains in excess in the artificial stone, and if it be afterwards dissolved out, either intentionally or by exposure to the weather, the stone is left slightly porous. Now, according to the present invention, he treats the artificial stone thus manufactured with a solution of such a nature as to decompose and precipitate an insoluble substance from the chloride of calcium, or other soluble salt, used to act upon the soluble silicate. The solution which he finds most suitable, and most commonly employed, is one of carbonate of soda, which decomposes the excess of chloride of calcium and precipitates from it carbonate of lime, which is deposited in and well fills the pores of the stone.

Piles or Cylinders for Piers, Embankments, Coffer-dams, etc.—*J. Phillips.* Dated 30th January, 1864.—This invention has for its object to render more or less perfectly water-tight the vertical joints, interstices, or spaces existing between metal piles or cylinders employed for structures that are wholly or partially under water, and consists in forming grooves, recesses, shoulders, or flanges upon the contiguous sides of such piles, and then inserting into such grooves or recesses, or against such shoulders or flanges, pieces of wood or other suitable material, so formed that the pressure of the water causes them to fit tightly against one or more surfaces of the grooves, recesses, shoulders, or flanges of two contiguous piles or cylinders, thereby preventing the water from penetrating through the joints, interstices, or spaces between the two piles to the back of the same. The patentee prefers to make the grooves in the piles and the pieces of wood to be inserted of a rectangular form, and he forms the lower extremity of the piece of wood with a double incline, so that, when driven into the ground in the said grooves, it is made of itself to press against the back surfaces of the two grooves and the side surface of one of them.

* Selected from the *Engineer's* lists.

Books Received.

The Domestic Service Guide. London: Lockwood & Co. 1865.

The comprehensive scheme of this work will be best and most briefly explained by quoting its full title. It is called "The Domestic Service Guide to Housekeeping, practical cookery, pickling and preserving, household work, dairy management, the table and dessert, cellarage of wines, home brewing and wine making, the boudoir and dressing-room, travelling, stable economy, gardening operations, &c.; being a handbook of the duties of the housekeeper, cook, lady's maid, nursery-maid, housemaid, laundry-maid, dairy-maid, butler, valet, footman, coachman, groom, and gardener; from the best and latest authorities, and the communications of families, in several hundred new receipts."

The author, we happen to know, is a most experienced and laborious literary man, and this is not the only work of its class issued by him; but his previous work has long been out of print as well as out of date in its information. The object of the present volume is to supply a book of information on domestic service, in which the best and latest notices of invention and discovery shall be made available for what the late Prince Consort once declared to be "the largest of all the classes of her Majesty's subjects in England,"—the class of domestic servants, now considerably above a million in number.

The work is no less adapted for the use of masters and mistresses than of servants of all kinds. It is well classified, and its information is made still more easily accessible by a good index. We are glad to observe that in each section special attention has been paid to health-giving and sanitary cautions and to adulterations of food, prevention of accidents by fire, and many other most useful and important subjects.

There are various minor improvements which might be made in a second edition, which the work will certainly not be long in reaching. Thus receipts might be given for other summer beverages besides ginger-beer, which stands alone in its class in the present volume. Lemonade, for example, is a preferable drink, but no receipt for it is given. Something should be said, under "Candles and lamps," as to the now very extensive use of petroleum oils among the middle classes. In a receipt for removing superfluous hairs, on page 205, we should advise a more clear allusion to the fact that one of the two receipts given itself contains arsenic, which substance is very properly reprobated as an ingredient in depilatories. And so on. The book will form a standard work of its class; and it well merits the attention of the public.

Lighthouses. By David Stevenson, F.R.S.E., M.I.C.E. Edinburgh: Adam & Charles Black. 1864.

This is a reprint from the Scottish periodical named "Good Words." It gives a condensed account of Robert Stevenson's Bell Rock Lighthouse, built in the years 1807-11, and of other lighthouses,—their modes of construction, illumination, and management. Of the Bell Rock Lighthouse we have already fully treated in the *Builder*. This small volume gives a popular and interesting account of it, by a relative of its well-known engineer.

VARIORUM.

"Letter to J. Thwaites, Esq., Chairman of the Metropolitan Board of Works. By James Knight, Surveyor." The author of this pamphlet has experimented on a small scale with sewage and other manures on land, and he is of opinion that neither the liquid nor the solid form is the most suitable, either for the soil or for farm practice; but that "slop," of the con-

sistency of new cheese, and capable of being conveyed in trucks, would be the best form of it for profitable application to the land, the filtered fluid from the sewage being run into the river. He recommends the adoption of such a plan for the southern sewage, and deprecates the scheme of Messrs. Hope & Napier as impracticable, and valueless to the ratepayers. The value of the metropolitan sewage in the form of slop, taken out to the country in railway trucks, and sold to farmers, he estimates at 80,000*l.* per annum; the quantity being calculated at 400,000 tons, and the price 3s. to 5s. per ton.——The author of "The Curiosities of London" announces a volume of "Walks and Talks about London," in which the great metropolitan changes now in progress will be prominently referred to.

Miscellanea.

THE NATIONAL GALLERY.—The Vestry of St. Martin's-in-the-Fields have received notice from the Office of Woods and Forests that the Government will require the whole of the workhouse and the site for the purposes of the National Gallery, and invites that body to send in their estimate of its value.

THE PROPOSED WATER COLOUR PAINTERS' SOCIETY.—The promoters of the proposed new general exhibition of water-colour drawings, which is to be distinct from anything now in existence in England, inasmuch as its members will not be banded together into a society, have secured, we hear, the Dudley Gallery of the Egyptian Hall, Piccadilly. The exhibition is to open on the 20th of February next.

PHOTOGRAPHING ARCHITECTS' DRAWINGS.—Our attention has been called to some photographic copies of engineers' drawings by Mr. W. Willis, of Birmingham. By means of a photographic process, copies of drawings can be made rapidly and cheaply of the same size as the original. The original drawing is in no way injured by the process, and the copy is produced by simple superposition over the chemically-prepared paper, and is a positive copy direct without the intervention of a negative.

PORTSEA.—An application has been made to Parliament for procuring certain amendments in the Act for regulating the affairs of St. John's Chapel, says the *Portsmouth Times*, of the 19th November. The chief amendments are that the incumbent may in future participate in the funds at the disposal of the Ecclesiastical Commissioners; that the right of presentation to the benefice be vested in a body of trustees, who are to be elected by the proprietors of pews; and that marriages may be celebrated in the church.

A MEMORIAL OF THACKERAY IN WESTMINSTER ABBEY.—Immediately after Mr. Thackeray's death, a committee of gentlemen, with Mr. Shirley Brooks for hon. secretary, determined on the erection of a memorial to their friend, and obtained the sanction of the Dean of Westminster to its location in the Abbey. The exact site has now been selected, and a marble bust of the author of "Vanity Fair," will shortly be placed close behind the effigy of him whom Thackeray so honoured and eulogised—Joseph Addison. The bust will be executed by Baron Marochetti, who was on terms of intimacy with Mr. Thackeray.

NEW QUEEN'S PRINTING ESTABLISHMENT, CANADA.—The new Queen's printing-offices now in course of construction at Ottawa, for the united provinces of Upper and Lower Canada, are being erected for Mr. George Desbarats and the Hon. Malcolm Cameron, Queen's printers for the provinces, with rapidity; Messrs. Stent & Laver being the architects. The building, six stories in height, is constructed with solidity and with some taste. The total cost when completed will be about 10,000*l.* The contractor for the whole work is Mr. James Goodwin, of Ottawa. The erection of this building is regarded in Canada as a precursor of the early intended removal of the Government from Quebec to the new capital, selected not only by the Queen as the capital of the united Canadas, but also named from its central location as the Federal seat of Government by the intercolonial delegates who recently held a convention at Quebec to devise the best means for uniting from the Atlantic to the Pacific all the British American dependencies.

THE ROYAL MAUSOLEUM, FROGMORE.—The massive sarcophagus, which is intended to be placed in the new mausoleum at Frogmore as a receptacle for the remains of the Prince Consort, has been conveyed to the grounds at Frogmore. It is of a dark polished Scottish granite.

ARCHITECTURAL INSTITUTE OF SCOTLAND.—At the annual general meeting of the Architectural Institute of Scotland, to be held in the Hopetoun Rooms, Edinburgh, on the 7th instant, the Right Hon. the Lord Provost in the chair, the report of the Council will be read, and a paper by Mr. John Dick Peddie, "On the Doric Temple."

THE CONSERVATIVE LAND SOCIETY.—The twelfth annual meeting was held on Tuesday, the 29th November. The report stated that the receipts for the year were 81,242*l.* 15s. 3d., an increase over the previous year of 5,488*l.* 9s. 10d.; that the grand totals were 782,389*l.* 13s. 10d.; the sale of land, 368,800*l.* 13s. 10d.; the total withdrawals 231,487*l.* 1s. 7d.; that the society has acquired fifty-five estates in twenty-one counties; that 21,228 50*l.* shares have been issued, representing 1,061,400*l.*; and that the reserve fund was now 11,000*l.* A dividend of 5½ per cent. per annum was declared.

"JUNIOR ATHENÆUM CLUB."—This new club, intended to consist of members of both Houses of Parliament, members of the Universities, Fellows of the Learned and Scientific Societies, and gentlemen connected with literature, science, and art, is now fairly launched, and we are disposed to think quite successfully. Premises have been obtained in King-street, St. James's (29), and have been tastefully fitted for the purpose, decorated and furnished, under the direction of Mr. E. Roberts. These are exceedingly snug and commodious, but will probably have to give place to a more extensive building in a few years. The committee dined together in the new house with some few friends, on Saturday last, Mr. James Heywood, F.R.S., presiding genially, when it was stated that more than 900 names of candidates for membership had come before them. From these about 300 had been elected, the committee looking jealously as to eligibility. There is wide room in this yearly increasing Babylon for another club, where men of all parties treading the paths of art, literature, and science may meet on common ground; and we think it will be found that the Junior Athenæum has not been established too soon.

MRS. LIRRIPER ON BUILDERS.—Ah! it's pleasant to drop into my own easy-chair my dear, though a little palpitating, what with trotting upstairs and what with trotting down, and why kitchen stairs should all be corner stairs is for the builders to justify, though I do not think they fully understand their trade and never did, else why the sameness and why not more conveniences and fewer draughts and likewise making a practice of laying the plaster on too thick I am well convinced which holds the damp, and as to chimney-pots putting them on by guesswork like hats at a party, and no more knowing what their effect will be upon the smoke bless you than I do if so much, except that it will mostly be either to send it down your throat in a straight form or give it a twist before it goes there. And what I says speaking as I find of those new metal chimneys all manner of shapes (there's a row of 'em at Miss Wozenham's lodging-house lower down on the other side of the way) is that they only work your smoke into artificial patterns for you before you swallow it and that I'd quite as soon swallow mine plain, the flavour being the same, not to mention the conceit of putting up signs on the top of your house to show the forms in which you take your smoke into your inside.—*Mrs. Lirriper's Legacy.*

THE SAXONS.—Mr. John Brent has finished his excavations in the Saxon cemetery, at Sarr, in Thanet, for the present year. He laid open nearly 300 graves, some of especial interest. As an example one contained four fibulæ (two circular and two cruciform); five gold pendants, which, with the fibulæ, are elaborately ornamented; a very large crystal ball, set in a silver-gilt frame for suspension; a silver-gilt perforated spoon, set with garnets; an elegant footless glass cup, a silver ring, beads, and other objects, such as buckles, shears, and keys. The weapons, implements, and ornaments from Sarr, are deposited in the Charles Museum, at Maidstone. The Kent Archæological Society provided the funds at Mr. Brent's disposal in aid of the expenses for labour, &c.

CAMBERWELL.—Application is to be made to Parliament by the South Metropolitan Gaslight and Coke Company, for power to purchase Christ Church, Camberwell, and provide a new site for a church in its place.

AN OLD WAY OF PAYING WAGES.—In the Norwegian mines, a singular custom is observed in paying the weekly wages of the men. They all present themselves on Saturday evening to the inspector, who, having settled accounts with each, bids him turn round, and writes in white chalk upon his black back the sum due to him. Thus numbered, the man goes to the cashier, who also turns him round to look at the figures, and pays him without having a word to say.

WOLVERHAMPTON BOROUGH SURVEYORSHIP.—There were fifty-five candidates; and, after the committee had devoted about four hours to the examination of the testimonials, the number of candidates was reduced to six. The following are the gentlemen thus selected:—Mr. Anthony Morgan, Leamington; Mr. Joseph Gordon, Carlisle; Mr. Samuel Harpur, Merthyr Tydvil; Mr. William Crutchley, Wakefield; Mr. James Lemon, Spring Garden, London; Mr. John William Gray, 31, Cloudesley-terrace, London. We have received just complaints that proper attention could not have been paid to the testimonials submitted in four hours!

PUBLIC BUILDINGS FOR BURTON-UPON-TRENT.—At a private but influential meeting held at the local Commissioners' Offices, Mr. Bass, M.P., moved "That it is the opinion of this meeting that public buildings are required in the town of Burton-upon-Trent, and that such building should include some or all of the following, viz., a market-hall, town-hall, including assembly-rooms and reading-rooms, town-commissioners' offices, baths and wash-houses, museum, and dispensary." The resolution was carried unanimously, and a committee appointed to inquire into the most eligible site for the proposed buildings, and to report to a public meeting.

THE PROPOSED ROAD FROM CADOGAN PLACE TO SOUTH KENSINGTON.—We are glad to find that notice has been renewed of intended applications to Parliament in the ensuing session to introduce a Bill for the construction of a new thoroughfare from Cadogan-place, Chelsea, to the South Kensington Museum. The Bill will give power to the company intending to apply to Parliament for it to make a street or road commencing at Pont-street, in the parish of St. Luke, Chelsea, crossing Cadogan-place and Sloane-street, and terminating in the Cromwell-road or Brompton-road, Old Brompton, near the east end of the South Kensington Museum.

ANOTHER SCOTTISH "NATIONAL MONUMENT" SUGGESTED.—A correspondent of the *Scotsman* proposes, for the projected Albert Memorial, the crowning of the brow of the imaginary lion formed by the sky outline of Arthur's Seat, one of the Edinburgh hills, with "an open shrine, in the shape of a colossal regal crown. Visible from all sides, and even from the sea, nothing," he continues, "could be more graceful than the arched ribs of the crown meeting in the centre to support an ornamental cross. The whole structure, including the rim of the crown, should consist of open work, and this would render its outlines perceptible and distinct at distances whence an opaque building could hardly be discerned. In the interior, immediately below the cross, a statue might be placed." Another correspondent thereupon sarcastically suggests, that to complete the likeness of the lion with the regal crown, the tail must be considered. "It might at first sight seem desecration," he remarks, "to break the sublime curve of the rump by the insertion of this appendage; but a deeper study of the subject will undoubtedly prove that it would add to the completeness of the design, and bestow on it a fresh beauty. The whole structure of the tail should consist of open work, so as to render its outlines perceptible and distinct: it should, in fact, be a lofty arch of masonry, springing from the brow of Sampson's Ribs, on which a bold mass of appropriate stonework, slightly curled, would represent the hairy tuft that terminates the caudal appendage of the genus *Leo*; and, rising gradually across the Queen's Drive, terminate at the appropriate part of the leonine back above. Visible from all points, and even from the sea, nothing could be more graceful than this arched tail—a tail under which glimpses of the heavens would appear, and which would give an animated and dignified aspect to the whole lion."

South Shields New Theatre Company.—At a meeting of the intending shareholders and others interested, it was resolved to apply forthwith for the registration of the company. Directors and officers for the company were appointed.

Fires.—Another great fire has taken place at Bermondsey, where extensive premises at the Dockhead, containing saltpetre, jute, sugar, and other stores, have been destroyed, after burning on for several days without ceasing. The jute, from the joint action of water and fire, swelled so as to burst out the walls, a large portion of which 30 or 40 yards in length and 18 ft. or 20 ft. high, fell into the road. At Devonport Dockyard, also, a store has been destroyed by fire. Surely all these serious fires will at last lead to a reform in the construction of such buildings as those destroyed, so as to render them thoroughly fire-proof.

Tyne and Newcastle-upon-Tyne Improvements.—Notices have been given of intention to apply to Parliament for provisions for facilitating the construction of Tynemouth Docks,—extension of time for completing works; additional works at Northumberland Docks; supply of water to Northumberland Docks by Newcastle and Gateshead Waterworks Company; powers for removal of water-pipes and use of the High-level Bridge of the North-Eastern Railway Company; tunnel under River Tyne for gas and water pipes; and for other purposes connected with the improvement of the Tyne. For the improvement of Newcastle-upon-Tyne, the notice relates to provisions for new police-court; further powers as to sewerage and utilization of sewage; removal and rebuilding of certain hospitals; further powers of improvement; new streets and improvements, &c.

St. George's Church, Campden-hill, Kensington.—This church has been consecrated by the Bishop of London. The edifice contains above 1,100 sittings, of which one-third are free and unappropriated. Mr. Bassett Keeling was the architect. The district to be attached to the new church will include 154 villas built, or about to be built, in Holland Park. When the present vicar of Kensington, Archdeacon Sinclair, was appointed, three churches and an unconsecrated chapel formed the whole parish provision for public worship in connexion with the national church. There are now seventeen churches and chapels, affording accommodation for 19,640 persons. The whole population of the parish is about 80,000. It is proposed to build three additional churches,—one between St. Paul's, Onslow-square, and St. Mary's, West Brompton, which is about to be commenced; another in Notting-hill; and a third, St. Stephen's, South Kensington, for which subscriptions are in progress, but which cannot be proceeded with until the precise direction of the proposed railway between Kensington and Brompton has been determined.

Sanitary State of Bath.—The Board of Guardians of the Bath Union lately commissioned one of their medical officers, Mr. Frederick Hanham, to report upon the health of the districts in the vicinity of the Avon, from Bathford westward to Twerton. Mr. Hanham has accordingly submitted to the Board an elaborate statement of the results of his investigations, from which it appears that there is pressing necessity for an increased water supply; and better drainage and purification of the Avon. Details are given sufficient to prove that the localities nearest the stream are the unhealthiest, and that the disease which there proves fatal in a large number of instances is one which is universally attributed to the noxious exhalations inseparable from bad drainage and a contaminated stream. The average mortality of the city districts was 25 in every 1,000 of the population; the average mortality of the rural districts 24 in every 1,000, taking the returns of the year ending September last; so that the country parishes bordering on the river were not, as a whole, much better than the city, and no one of them was so salubrious as Bathwick. The investigations have brought out one special point very clearly, viz., that the parts of Bath inhabited by the opulent, such as the upper sections of Lansdown and Bathwick, are healthier than many country parishes. Another point is, that a large per-centage of the mortality in the lower quarters of the city, and in the villages skirting the Avon, may be reduced by the improvement of the drainage and the purification of the river.

The Carlisle City Surveyorship.—Mr. Gordon, the city surveyor, having applied for an increase of salary, or for leave to accept private practice beyond the municipal boundary, the Council have adopted the latter alternative in order to retain his services. Mr. Gordon had become a candidate for the surveyorship of Wolverhampton, where the salary is 400*l.* a year, whereas Mr. Gordon's is only 240*l.* He would have expected 100*l.* more from the Carlisle Council. Mr. Gordon was one of the fifty-five candidates for the office at Wolverhampton, and had been selected as one of the six among whom the final competition lay.

The new Iron Floating Bridge connecting Portsmouth with Gosport.—This is 100 ft. long (or 16 ft. longer than the present bridge) and about 60 ft. wide. The contract was taken by Messrs. Lewis & Stockwell, iron ship-builders, of Blackwall, London, who entrusted the engines and machinery to the firm of James Watt & Co., of London and Soho. The engines are of the collective nominal power of fifty horses, with duplicate boilers,—the condenser, air-pump, and frame being all combined. Two large and roomy cabins, above 8 ft. high, are placed at each end, and are well lighted by means of domes or cupolas, which are further utilized on the upper deck to form comfortable seats for the passengers. Attached to the machinery are a pair of oscillating engines, which may be worked on the carriage-deck by means of a lever, and which give the option of raising and lowering the prows by either hand or steam power.

Water Supply, etc.—A Company has been formed for the purpose of erecting Water-works, Baths, Public Assembly and Reading Rooms at West Worthing. The capital required is 20,000*l.*, to be raised in 2,000 shares of 10*l.* each. Arrangements have been made with the West Worthing Investment Company, to supply sea and spring water to all the houses to be erected upon twenty-five acres of their land which lies immediately adjacent to the company's property. The company also proposes to erect a swimming bath for ladies, and another for gentlemen.——Soon after the death of the Prince Consort the inhabitants of Frant resolved to form a public well, and identify the undertaking with the memory of the Prince. Unavoidable delay occurred, but subsequently a well was sunk which yielded an abundant supply of pure spring water. The chief stone of this well has just been laid by Lady Caroline Nevill amid great rejoicings of the inhabitants.——A spring of water having been presented to the inhabitants of Chippenham by Mr. M. Esmeade, the cost of introducing it into the borough for the supply of the town has been given by Sir John Neeld, Bart. The cost will not exceed a hundred guineas.——The inhabitants of Ruthin have resolved on the erection of water-works to supply that town.

TENDERS.

For new chapel at Patriotic Asylum, Wandsworth. Mr. Rhode Hawkins, architect:—

Cubitt	£5,496	0	0
Mansfield	5,440	0	0

Revised and Corrected by Practical Builders. New Edition, with the present Value of Labour and Materials. Super-royal 8vo, cloth, 12s.

"This volume, devoted to measuring and valuing artificers' work, is a very useful one."—Builder.

"Contains a great deal of information, well arranged and systematically given."—Mechanics' Magazine.

London: published by KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Editions (Seventh) of the following Practical Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING, Revised by TREDGOLD: being a new and complete System of Rules for the Use of Workmen; founded on fundamental Mechanical Principles. Ten parts at 2s. or in 1 vol., containing upwards of 50 Steel Plates, and numerous Wood-cut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Rules for the Use of Workmen; the Formation of Mortars, Cements, Stucco, &c. It also contains a variety of new designs for Mantel Pieces, Doors, Chimney-pieces for Churches, &c. &c.; and a description of the various materials employed. Ten Parts at 2s. or in 1 vol., 5s.; containing upwards of Ninety Steel Plates and Numerous Wood-cuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and explanatory Rules for drawing the Five Orders thereto in the purest style; including an historical Sketch of Grecian Architecture. Illustrated by upwards of One Hundred and Forty Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 2s.; or in boards, 25s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE; containing Plans, Elevations, Sections, Perspective Views, Details of Interiors, Chapels, Schools, Almshouses, Lodges, Gate-Ways, Stables, and other buildings for public purposes. By S. H. BROOKE, Architect. Beautifully executed in Steel. Ten Parts, at 2s. or 20s. in boards.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views, Details of Interiors, Chapels, Schools, Almshouses, Lodges, Gate-Ways, Stables, and other buildings for public purposes. By S. H. BROOKE, Architect. Beautifully executed in Steel. Ten Parts, at 2s. or 20s. in boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE: containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By H. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 2s.; or in boards, 25s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. HOPE, Esq., Accompanied by actual Specimens of Wood Graining and Marbling. Ten Parts, at 2s.; or in boards, 25s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Most Important Processes employed in every description of Manufacture of the British Empire. Founded upwards of 2,000 Wood Engravings. By LUKE HEBERT, Civil Engineer, &c. The regarded as one of Mechanics' Associate Undertakings many of the most eminent Scientific and Practical Men, the Proprietors of the Encyclopædia have invariably made it their study to engage the serious attention of the Editor; for, as the value of each was tested by experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as full and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo volumes, cloth lettered, price 30s.

FOR CHRISTMAS AND NEW YEAR'S GIFTS

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent cohesibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 400 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union Joints, Flasks, Bottles, Bowls, Flat trays, Curtain rods, Galvanic Batteries, Tallotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA-PERCHA COMPANY, PATENTEES,
WHARF ROAD, CITY ROAD, LONDON.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four rec. rooms, two being 50 feet in length; eleven bed rooms, stabling for eight horses and coach-houses for four carriages, with numerous other offices, extensive ornamental grounds, walled kitchen garden, and productive gravelly soil; pure Spring Water laid on; the house is within a few minutes' walk of the Richmond Station of the South Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Bucklersbury.

ELIGIBLE FREEHOLD LAND in the Parish of the City. The Court of the Worshipful Company of Mercers are prepared to receive TENDERS for the SITE of the PRIMERS' almshouses, to be erected on the ground, which may be tendered for either in three portions, four parcels, or in its entirety, and may be seen at the Office of Mr. GEORGE SMITH, Surveyor to the Mercers' Company, Frederick's-place, Old Jewry, EC, where Tenders are to be delivered on or before TWELVE o'clock on the 31st DECEMBER, indorsed "Tender for Ground, Basinghall-street."

BUILDING LAND.—EGHAM, SURREY. About 70 ACRES adjoining Egham field green, TO BE LET, in Plots, or otherwise, on Lease for 99 years. For particulars and Plans, apply to Mr JOHN CLUTTON, 9, Whitehall-place, Westminster, S.W.

BUILDING LAND TO BE LET, by Tender, on 15 h DECEMBER.—PIPER'S TRUST ESTATE, Wyndham-road, Camberwell.—Full particulars for Tender and plans can be obtained at the Surveyors' Offices, WALES & SPARKS, 8, Great St. Helen's, E.C.

BUILDING GROUND, CITY of LONDON.—Notice is hereby given, that the City Lands Committee will meet at GUILDHALL, on WEDNESDAY, the 14th DECEMBER next, at ONE o'clock precisely, to receive PROPOSALS for a BUILDING LEASE, for Eighty Years, of the SITE of the PREMISES known as No 134, Fenchurch-street, and No. 17, Billiter-street, in the City of London. Further particulars may be obtained upon application at the Architect's office, 6, Finsbury-circus.

FERDINAND BRAND, Comptroller.

Guildhall, November 15, 1864.

GUILDHALL, 15th November, 1864.—The Committee for Letting the City Lands will meet at Guildhall, on WEDNESDAY, the 14th DECEMBER next, at ONE o'clock precisely, to receive PROPOSALS for LEASES for TWO HOUSES, Nos. 5 and 6, Cross Lane-court, New Broad-street, a House, No. 14, Old-street, and a tenement at the rear in Middle-row, and a House, No. 29, Old-street, St. Luke's; a House, No. 10, Tabernacle-walk, and Two Houses, Nos. 48 and 61 Leonard-street, Finsbury. Plans of the Property may be seen and forms of Tender obtained, upon application at the Architect's Office, Guildhall.

FERDINAND BRAND, Comptroller.

LARGE, Light, Substantial WORKSHOPS TO BE LET, presented and ready for occupation, about 1,000 square feet, with five rooms and a lot of yard at three shillings. Also, together or separately, a House and shop in the main thoroughfare adjoining.—Apply on the premises, Office 21, Widnes.

EXHIBITION ROOMS.—TO BE LET, entire the E. end of Foundry, the GALLERY of the SOCIETY of BRITISH ARTISTS, consisting of Five Lofty Rooms.—Particulars on the Premises, Suffolk-street, Pall Mall East.

TO BE LET, a first class PLOT of GROUND for a Public House, and THREE SHOPS, in an old-established and rapidly improving neighbourhood.—For further particulars apply to Mr. WILLIAM MUSGROVE, Architect, 11, Lincoln's-inn-fields.

TO BUILDERS, CONTRACTORS, and OTHERS requiring Large Commodious PREMISES.—TO BE LET or SOLD, with possession at once and the whole at Lady day next, a Large YARD, with workshops, counting-house, premises fitted complete. Three entrances. Suitable for extensive building operations.—Apply to Mr W H MOORE, Auctioneer, 6, Great George-street, Westminster, S.W.

SUNBURY COURT ESTATE. This Estate is now TO BE LET, on building leases, for the erection of Detached Residences of a suitable class. The property is situate within a mile of the Hampton Court Station of the Loop Line Railway.—For particulars, apply to Mr. R. H. ARNIZ, Architect and Surveyor, 4, Cannon-row, Westminster, S.W.

PREMISES.—Very valuable PREMISES, at present in a main and populous neighbourhood, one mile north of the Bank, containing about 1,500 square yards, and lately occupied by a Coach Builder and Jobmaster, who resided there on. The great facility of premises, owing to the increase of railways in the metropolis, renders them peculiarly adapted for the wants of any extensive carrying business, and a desirable valuable space.—Apply to E & W STURGE, Bridge Wharf, City-road, E.C.

TO BE LET or SOLD, extensive BUSINESS PREMISES and RE-LICENCE, newly erected, and comprising about 20,000 feet superficial of ground floor and stores.—For particulars, apply to Messrs. HUNT & STEPHENSON, 1, Pall's Head Chambers, Watling-street; or to Mr. VIGERS, 3, Frederick's-place, Old Jewry, City.

MR. J. TAYLOR has to announce that the Lease of the CLAPTON PARK ESTATE, which were not sold on the 7th November may now be PURCHASED by PRIVATE TREATY. Nine-tenths of the price or any less amount can remain on contract or mortgage, to be paid off at any time by instalments of three years, with interest at the rate of five per cent per annum.—Plans may be ascertained on personal application, to the Auctioneer, at No. 7, Fenchurch-street, City.

EXTENSIVE PREMISES and GROUND in Bath street, St Luke's, EC 238 feet deep and 146 feet frontage, known as the French Hospital, TO BE LET, for Building purposes or otherwise, on Lease, by TENDER, for a term not exceeding 99 years. Persons desirous to be entrusted to the Governor and Directors on or before the 1st day of FEBRUARY, 1865, at the French Hospital, where forms of Tender with a plan of the ground may be obtained; or at the Office of Mr R L ROUMIEU, 19, Lancaster-place, Strand.

VALUABLE BUILDING SITE TO BE LET; BILLITER STREET, City.—The Clothworkers' Company is prepared to receive TENDERS for a BUILDING LEASE of the SITE of the premises known as No. 18, Billiter street; term, eighty years, as from March as next. Particulars and a plan may be obtained of R BADWIN, Esq. of Cadbury-house, Hackney, 47, Mincing-lane. The Tenders are to be delivered on or before TUESDAY, the 27th instant, at Clothworkers' Hall.

By order, FREDERICK W. FORDER, Surveyor.

16, Russell square, W.C. December 1, 1864

WATERSIDE MANUFACTURING PREMISES, with steam power.—Messrs. FULLER & HORSLEY are instructed to LET on LEASE, the entire WATERSIDE PREMISES occupying a site of 2,000 square feet, adjoining the Whitefriars Basin, City-road and comprising large and substantial modern brick built manufactory of two floors, engine and boiler houses, all 30-horse power steam engine and three Cornish boilers, range of brick-built offices and paved yards with railway entrances. There is a water frontage of about 240 feet.—For further particulars, apply to Messrs. FULLER & HORSLEY, 13, Finsbury-circus, London, E.C.

MONEY.—1,000l. to be Sunk in PURCHASING TWO ANNUITIES. Second amount. One payable during Two Lives, 61 and 58; the other 38, or rent on Mortgage for any number of years.—Direct proposals, describing security, to Mr. ORPWOOD, Auctioneer, 12, City-rd.

MONEY.—IMMEDIATE CASH ADVANCES on FREEHOLD and LEASEHOLD PROPERTY, REVERSIONS or ANNUITIES, WINE, SPIRIT, and TIMBER WARRANTS, FURNITURE, SHARES, &c.

Mr. RICHARD CROSSLEY, 17, Moorgate street, Bank, E.C.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament 1859) 74 RUSSELL STREET, COVENT GARDEN, W.C., Advances from 100l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Money returned on the advance can be repaid by easy instalments. Property sold or let to tenants to release the borrower promptly, and the repayment of the advance taken as rent. Country properties extended to borrowers than to building societies, there being no shares to subscribe for, or fines, or fluctuations for an average, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

By order of the Board,

J. W. DANIELL, Secretary.

THE LONDON and GENERAL WATER PURIFYING COMPANY (Limited) Capital 100,000l. in 10l. shares, of which 1l. each.

First issue 5l. per shares, Deposit 1l. per share upon application, and 1l. on allotment.

Subsequent calls not to exceed 2l. per share, and at intervals of not less than three months.

Chairman of Directors.—THOMAS Ingestre, M.P.

Bankers.—Messrs. Dimsdale & Co. 50, Cornhill, E.C.

Brokers

Solicitor—Henry Smith, esq. 34, Norfolk-street, Strand, W.C.

Secretary—H. P. Keighley, esq.

Offices—15, Strand, W.C.

The Company having purchased Mr. F. H. Donnell's patent of his filter for purifying water direct from the cistern and other sources, is now prepared to carry out the completion of Artificial Hall Head, esq. M.D. and other scientific authorities.

The filter through which the water is caused to pass when being drawn will be placed in the cistern, will yield the water pure, limpid, and free from colour and taste; it will arrest the impurities from animal and vegetable matter, and destroy the germ of all organic contamination and impurity, as also in solution. The water obtained by this treatment when in use will be fine, and the office, a lot loaf each are more ready than from a spring.

The filter will require no attention on the part of servants or others with it, it will be fixed and kept in order by the Company, and placed in all towns and country and others as kept under the control in houses in and about London. The cisterns will be cleaned out once or a year, and a former if required, at the following annual rates to be paid in advance upon being asked, beyond which other expenses will be incurred:—

	Per annum
Filter No. 1 supplying half a gallon per minute	0 7 6
Filter No. 2	1 10 0
Filter No. 3	1 1 0
Filter No. 4 yielding 2 gallons per minute	1 1 0

The first two of these will have accumulators for drinking with a separate pipe, which may be laid to any part of the house by the client.

The two last are calculated to filter all the water which passes through the supply pipe.

The Company are prepared to carry on their operations to other large and populous places supplied with water like unto the metropolis, and will engage upon terms to be agreed upon. This has undertaken for the Government, Corporations, and Companies, and to supply them and the offices of Parliament, the National Mercantile Insurance companies, the museums, libraries, steam vessels, hotels, clubs, hospitals, workhouses, prison barracks, and other Government buildings and establishments, on terms to be agreed upon.

To the trade of the supply of the filters from merchant members of the trade a profit on and others who have them in use for the sale and the different to the Company, where the filter can be used, and any information obtained.

An application must be made to the secretary from whom forms can be obtained. The filters will be fixed on and after the 1st of January, 1865, in the order in which applications are made.

Applications for the shares, and other terms of the first issue to be sent to the Bankers, Brokers solicitors, or to the Secretary, from whom respective forms can be obtained.

THE LONDON and GENERAL WATER PURIFYING COMPANY (Limited).

Applications for the SHARES, and other terms of the first issue to be sent to the Bankers, Brokers solicitors, or to the Secretary, from whom respective forms can be obtained.

THE LONDON and GENERAL WATER PURIFYING COMPANY (Limited).

AGENTS being REQUIRED through out the metropolis and country, and in other populous towns, applications to be necessary from those desirous of undertaking the Company's Agency, upon terms to be agreed upon, are invited.

H. P. KEIGHLEY, Secretary.

15, Strand, W.C.

R. LANGLEY, Agent.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which has been in operation at the Brickfields of

J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two-fold.

1st. Bricks made in the usual manner burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large pecuniary saving.

2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.

Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

LITTLE CASTERTON FREESTONE.
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD,
The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE is used largely by London Builders.

VICTORIA MARBLE WORKS
38, LOWER BELGRAVE PLACE, adjoining the Victoria Railway Station, and at Commercial-road, Pimlico, London.

THOMAS LAMBERT & SON,

Self-Regulating Pan Closet. Lambert's Ball Valve. High-Pressure Bib and Stop Valve.

PATENTEES and MANUFACTURERS, SHORT STREET, NEW CUT, LAMBETH.
T. L. & SON find it necessary to state that their manufactures have their NAME legibly marked thereon.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

INTERNATIONAL EXHIBITION, 1862.
CLASS 35, NO. 6849.
The only Medal "for Stone Ware" has been awarded to
DOULTON & WATTS, LAMBETH POTTERY,
LONDON.
In exp[illegible] a greatly increased sale, D. & W. have determined to introduce [illegible] pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the [illegible] of the commonest description of earthenware.
Experience has shown that this shape is the most simple and efficient, and that [illegible] strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.
FIGURED STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

DOULTON'S PATENT OPERCULAR PIPES.

By the introduction of one of these Pipes, at intervals, with ordinary Socket Pipes, Drains can be examined and cleansed. The Cover, being fired in one piece with the Pipe, fits perfectly. There are no imperfect joints, or complication of parts.
Manufactured by HENRY DOULTON & CO. LAMBETH.
MANUFACTORIES—LAMBETH, LONDON; SMETHWICK, near Birmingham; and ROWLEY REGIS, STAFFORDSHIRE.

CHEAP, LIGHT, AND DURABLE ROOFING.
CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.
1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 43 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.
INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.
CROGGON and CO.'S PATENT FELTED BREATHING, for Covering Ships' Bottoms, &c. and
DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.
Samples, testimonials, and full instructions, on application to
CROGGON & CO. 2, DOWGATE HILL, LONDON; 2, GOREE PIAZZA, LIVERPOOL; And 59, GEORGE SQUARE, GLASGOW.

TYE & ANDREWS' NEW PATENT SINK TRAP is universally admitted to be the only perfect Trap for Sinks in Domestic Dwellings, as fixed at the principal Institutions. Among others, Wellington Barracks, Royal College of Surgeons, &c. &c. Prospectuses on application to the Patentees, TYE & ANDREW, Brixton-road.
SUPPLIED BY ALL LEAD MERCHANTS AND IRONMONGERS.

UNDERHAY'S PATENT REGULATOR CLOSETS for constant or intermitting supply, dispensing with Cisterns, Service Boxes, Valves, Levers, Cranks, &c. &c. Much time is saved in fixing, and a better flush of water obtained in use.
Pan, Valve, Self-acting, and Servants' Closets on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed, 50,000 of them have been sold, and no instance of failure has occurred.
TO ARCHITECTS, BUILDERS, PLUMBERS, &c.
F. G. UNDERHAY
now manufactures on HIS OWN ACCOUNT his Patent Regulator Water-Closets, Valves Gas Meters, &c. on the premises.
CRAWFORD PASSAGE, CLERKENWELL, LONDON, E.C.

READE & HEWITT'S PATENT PNEUMATIC PAN and SELF ACTING WATER CLOSETS, RAILWAY URINAL, and SEWER FLUSHING APPARATUS.
The simplest, strongest, and cheapest Closets manufactured, acting efficiently with or without Supply Cistern, and at high or low pressure. Specially adapted for railway stations, offices, public buildings, workshops, and any situations where subjected to severe usage. Prevents waste of water, saves piping, cranks, wires, service-box, and all the complicated apparatus of self acting closets.
The Self-acting Pneumatic Flushing Vessel flushes ranges of urinals regularly at intervals, the time between the discharges being regulated by a simple tap, thus saving an immense quantity of water which ordinarily runs to waste.

MEDIÆVAL CABINET MANUFACTURERS & UPHOLSTERERS,

58, SOUTH MOLTON STREET, LONDON, W.

Sole Manufacturers of Holmes's Patent Church Benches and Chairs.

CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and DISHONEST ARTICLES instead of SMITH'S PATENT DOUBLE ACTION DOOR SPRINGS;
SMITH'S PATENT WEATHER-TIGHT WATER BAR; and
SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS;
The above are most respectfully to be noted to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

NAILS and IRONMONGERY from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES,
A complete List of which will be forwarded upon application to

N.B. The usual discount to BUILDERS and the TRADE.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES
To BUILDERS, CARPENTERS and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

THE ATTENTION OF ARCHITECTS AND SURVEYORS IS RESPECTFULLY SOLICITED TO
FLEXEN'S PATENT DRAUGHTLESS VENTILATOR,
Now used in various leading establishments in London. It supersedes all others in its simplicity, free ventilation, and excluding all draught and dust; requires no alteration of sashes, and effectually produces a good and agreeable air in the most heated apartment. In establishments where a great amount of gas is consumed, or steam is generated, this Ventilator has fully carried out the requisites pursued. Office, 46, Skinner-street, Snow-hill, E.C. where models can be seen, references given, and all information obtained.

NORTH-LONDON ZINC WORKS, 17, Exmouth-street, Clerkenwell.—Improved LAY ZINC PLATE for Builders.—J. DORE continues to LAY ZINC PLATE complete at, No. 14, 4d. per foot super; No. 11, 4½d.; No. 12, 4¾d.; No. 13, 5d. Pipes and Gutters equally low. Chimney-flues, 1s. and 1s. Cowls from 4s. each. Sheet Zinc, 2½ per ton. FOR CASH

TRAVELLER.—WANTED, a Secondhand 10-ton OVERHEAD TRAVELLER (about 30 feet span), with the necessary Hand-gear and Rack complete, for re-erection. The price must be moderate. Apply, by letter, prepaid, to G. A. Mr. Roberts, Bookseller, Arabella-row, Pimlico.

WANTED to PURCHASE, 10,000 BRICKS, Stocks, Place and Grizzle. For Cash Delivered at Chelsea R. Sc. Battersea—Address, A. M 14 Basil-street, Knightsbridge, S.W.

BY HER MAJESTY'S ROYAL LETTERS PATENT
FOXLEY'S CORRUGATED BRICKS,
For GARDEN WALLS.

Are ornamental, cheap, and durable; the most effectual remedy against all the evils attending the present system of training fruit trees.
As compared with trellis of iron, these bricks are only one tenth of their cost, and will last as long as the wall stands. The bending furnishes a protection against the spring frosts, and prevents cold draughts; while the trellis, by leaving a clear space behind the trees, causes a draught. Any kind of trellis is expensive, cumbersome, and perishable, and instead of preventing increases the accumulation of insects and dirt. It may certainly be true that iron is preferable to fruit-trees; but, at any rate it is safest to have only a brick wall, and decidedly the best to have such a wall as will furnish at the least cost and trouble, the largest quantity of the finest fruit. The Patentee challenges the whole world to produce anything comparable with these bricks for that purpose.
They can be seen anywhere, and used everywhere. The principle is so plain and simple, that a child may understand it, and requires no argument or trial to prove its benefits.
The apparatus for building, Press, and further particulars, on application to J. FOXLEY, Stanley Stratford, Bucks. Agents wanted to make them in every large town in the kingdom where they are not already appointed.

NEW STOCK NOW READY.
FINE WHITE BRICKS.
BEST RED BRICKS
White, Black, and Red Cutters. Also a large assortment of FANCY MOULDED BRICKS & GARDEN COPINGS.
Plain and Ornamental ROOFING and RIDGE TILES.
Delivered to Vessels in the Dock alongside the Kilns, in the River Medina.
Pattern Sheets and all information, may be had of R. LANGLEY, Agent, East Cowes Park, Isle of Wight.

SAMPLES of BRICKS, TILES, &c. Made at EAST COWES PARK.
Can be seen in the Constructional Department, KENSINGTON MUSEUM.
R. LANGLEY, Agent.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licences for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

BRICKS, PANTILES, AND PAVINGS.
J. H. ANDREWS, Wisbech, offers
Red Pantiles, at 47s. 6d. per 1,000.

To BUILDERS and ROAD CONTRACTORS.
Sifted Stones for roads, washed Gravel for concrete, Hoggan for paths, may now be had in any quantity, delivered alongside by the Grand Junction and Rose Coal Canals.
THOMAS MAYNARD, PROPRIETOR,
Dawley, near Hayes, Middlesex.

DENT'S TURRET CLOCKS.—The attention of Public Bodies, Gentlemen, and others, is respectfully requested to the Improvements effected in the Construction of CLOCKS, suitable for STABLES, CHURCHES, and other large Buildings, by the late E. J. DENT and E. DENT, Clock and Chronometer Makers to the Queen and Prince Consort, and Makers of the GREAT CLOCK for the HOUSES of PARLIAMENT. These Clocks, with Compensation Pendulum, adjusted for variations of temperature, to work the space of a year, from 1 foot to 40 feet diameter.
E. DENT & CO. 61, STRAND (adjoining Coutts's Bank); and 34 and 35, ROYAL EXCHANGE, LONDON.

VENTILATION.—OVERCROWDING.—Boyle's System of Natural Ventilation ensures a *more* healthy condition of atmosphere in overcrowded than is usually present in thinly-inhabited or empty places. The heat arising from the state of overcrowding is the motive power which works this system with infallible regularity and effect. The smaller, closer, hotter, and more overcrowded a place is, the easier and better can it be ventilated on this system. It is applicable to all places alike, Cottages, Mansions, Public Halls and Buildings, Churches, Hospitals, Factories, Work-rooms, Stables, Cow-houses, Conservatories, and even Mines and Ships. Let no one form a hasty conclusion from the seeming extravagance of this statement. It is a far wiser plan to examine first and conclude afterwards.

"*In one instance under our own eye Mr. Boyle has operated very successfully.*"—Article, "Air in the Corners," *Builder*, 15th October, 1864.

THOS. BOYLE, No. 23, Little St. Andrew-street, Upper St. Martin's-lane, London. Agents, Messrs. COMYN, CHING, & CO., at same address.

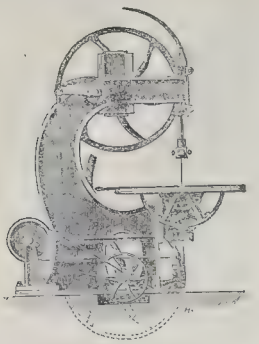
VENTILATING GLOBE LIGHT,
combining an agreeable method of lighting, with convenient, simple, and effectual ventilation



The advantages obtained are these:—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume about 7 feet of gas per hour, giving as much light as an ordinary three-light Chandelier, with a consumption of 12 feet per hour
No. 5, CHANDOS STREET, CHARING CROSS, LONDON, W.C.

FIRE-PROOF CONSTRUCTION.—
FOX & BARRETT'S PATENT.
This Improved system of fire-proof construction has been most extensively applied, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or cast iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone without the use of arches; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of timber, tiles, flooring boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as ensuring a degree of resistance of fire, roof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
12, YORK BUILDINGS, ADELPHI

JOSEPH GIBSON & CO., GAS, VENTILATING, and HEATING ENGINEERS, Manufacturers and Fitters of Lighting Contractors, Varey Lamps, &c. and Sole Agents in Scotland for M'Kinnel's Patent Concentric Ventilators, Lewal's Patent Heating Apparatus, &c.—15, Dundas-street, Glasgow.

Castings of all kinds, Scaffold-rope, Crab Winches, Screw-jacks, Patent Wrought and Cast Iron Windows, Patent Iron Stable Fittings, either plain, galvanized, or enamelled.

All Goods at the lowest Wholesale Prices. Illustrations and particulars sent upon application.

No. 13, KING-STREET, SNOW-HILL LONDON, E.C.

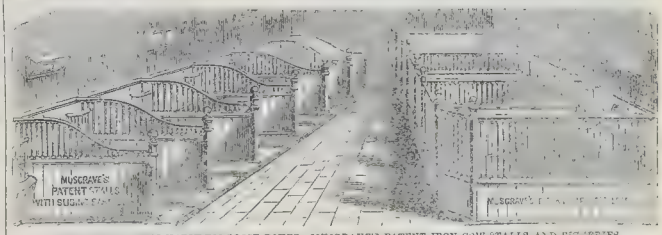
THE ONLY PRIZE MEDAL GIVEN for (SEE JURORS' AWARD, POWIS, JAMES, & CO. VICTORIA WORKS, CHIEF OFFICES,—

First-Class MACHINERY for WORKING WOOD INTERNATIONAL EXHIBITION, 1862), to BLACKFRIARS ROAD, LONDON. 26, WATLING STREET, CITY, E.C.

POWIS, JAMES, & CO.

Invite all who are thinking of putting down a MOULDING or FLOOR-BOARD PLANING MACHINE TO SEE THE NEW PATENT FOUR-CUTTER MACHINE.

POWIS, JAMES, & CO. also call the attention of RAILWAY CONTRACTORS and others to their NEW PATENT SELF-FEEDING BORING-MACHINE, suited for any angle, and to bore either vertically or at any angle.

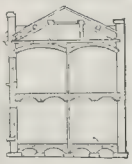


POWIS, JAMES, & CO. also invite BUILDERS and JOINERS to see their IMPROVED PATENT SELF-FEEDING HAND POWER COMBINED MACHINE FOR MORTISING, TENON CUTTING, and BORING. A great saving of manual labour, ONE MAN doing the work of EIGHT.

POWIS, JAMES, & CO. also call attention to their PATENTED UNIVERSAL WHEEL-MAKING MACHINE, for Morticing, Boring, Turning, &c. Wheel-stocks, and doing Four Spokes at one time.

POWIS, JAMES, & CO. also point to section of their NEW CIRCULAR SAW BENCH, for SAWING, RABBETING, GROOVING, and PLANING, or THICKNESSING BOARDS.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.



MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES. MUSGRAVE'S PATENT IRON COW STALLS AND FITTINGS.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were awarded Prize Medals for the work of the Season in the Exhibition. They can be seen in first-class stables in almost every county in England and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London Architects, not to for a lopting only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from ½ inches in the crown to any required thickness.

Address to the Patentees, England and Canada,

A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens, London."

BROWN & GREEN'S

PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c. they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

DRAUGHTS & DUST ROUND DOORS & WINDOWS

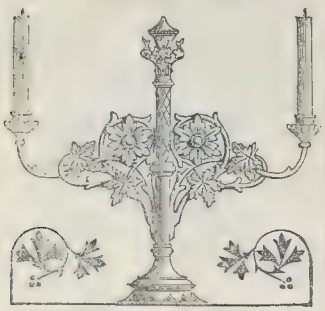
EFFECTUALLY PREVENTED BY

GREENWOOD'S PATENT INDIA-RUBBER MOULDINGS

(Can be had any Length or Pattern).

The neatest, most simple, and effectual method of making air-tight joints to Joiners' or cabinet work OLD or NEW.

Self-acting Spring sliders for the bottom of doors.



The most imperfect door can be made air-tight without re hanging.

The Trade supplied on liberal terms.

JOHN GREENWOOD, PATENTEE,

10, Arthur-street West, London Bridge.

JOHNSTON, BROTHERS,
MEDIÆVAL METAL WORKERS
AND GASFITTERS.

Manufactory, 190, High Holborn, London
Drawings and Estimates furnished.

38 and 65, YORK STREET, WESTMINSTER.

"By Royal Letters Patent."

"Indicator" Dial, 2½ in. diameter.

ELECTRIC BELLS FOR DOMESTIC USE.
BREGUET'S PATENT INDICATOR SYSTEM, with a Dial which shows when the Bell is ringing, the same as in use at the Grand Hotel, Boulevard des Capucines, Jockey Club, &c. Paris.
The superiority of Electric Bells is already settled in America and in France. For all modern works at Paris they have as effectually superseded the old crank and pull plan as, for travelling, the railway has superseded the antiquated stage-coach.
ADAMS & SON have much pleasure in stating that they have made arrangements with Messrs. Breguet, of Paris, to become their sole Agents for the sale and fixing of their Patented Apparatus upon the "indicator system," which has great advantages over all others, and is especially adapted for hotels, public buildings, and other large establishments. The details of this ingenious instrument, together with a description of the various apparatus in use for Electric Bells, may be had upon application, or by post.
WILLIAM S. ADAMS & SON,
Ironmongers by appointment to the Queen and his Royal Highness the Prince of Wales, and also to the principal London Clubs,
Engineers and Manufacturers, 57, Haymarket, and 14, Norris-street, S.W.

LONDON, W.C.

CLINTON & OWENS,
late FOWLER & CO.
WHITEFRIARS STREET, FLEET STREET, LONDON.

On HIRE or to ORDER.
PORTABLE STEAM ENGINES,
With or without Double Pumps, from Six to Twenty-four inch Barrels.
Also CENTRIFUGAL and OTHER PUMPS.
A large Stock of the above, and many others, as well as CRABS, BLOCKS, HOISTING TACKLE, BORING TOOLS, and other Contractor's Plant, manufactured by CLINTON & OWENS.

THE PATENT UNIVERSAL CHIMNEY HEAD.

This Chimney Head has been designed for the Prevention of Smoky Chimneys and Down Draughts. The openings or side apertures are so placed as to guide the wind upwards as it strikes the head from any quarter, thus creating a strong current, assisting the exit of the smoke through the top. The same apertures give ready access to the wind on such occasions as it strikes the head from above and thus greatly diminish the danger of its passing down the flue.

Price in Zinc..... 9d.
Ditto, Kitchen size . . 2s.
Patent Revolving Head 5s.
Ditto, Kitchen size . . 2s.

A Liberal Allowance to the Trade.

Manufactured solely by

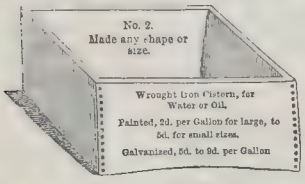
And to be obtained of all respectable Ironmongers in London and Country.



SMOKY CHIMNEYS.—The best Cure is the PATENT ALBERT CHIMNEY CAP, which has been in use for some time at Windsor Castle, Osborne, and other Royal Palaces, Mansions, Hotels, Public Buildings, &c., in general. Prospectuses on receipt of two postage stamps.

JAMES BARTON,
Iron Works, 370, Oxford street, W.
N.B. Manufactory for the Patent Stable Fittings and Enamelled Mangers.

SMOKY CHIMNEYS,
S. DEACON
Respectfully invites the attention of Architects Builders, &c. to the
PATENT LOUVRE CHIMNEY CAP,
which has been in use some time with perfect success, many smoking chimneys where other caps have been of no avail.
The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it, no increase up current, and the impossibility of a down one.
Prospectus, with testimonials, forwarded on receipt of Postage stamp, by
S. DEACON,

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

DESACHY'S FIBROUS PLASTER.

GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of dasper, &c.; for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator for the admission of Pure Air

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 119), Union-street, Borough, London.

POLONCEAU and SEYSSEL ASPHALTE.

ESTABLISHED  1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for Cattle Stables (as shown above), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish-street hill, London, E.C.

Country Builders supplied with Asphalte in Bulk for covering Footings, Bath Floors, &c. with instructions to lay it down.

KAMPTULICON FLOOR CLOTH.
for CHURCHES, PUBLIC BUILDINGS, BILLIARD ROOMS, and PRIVATE HOUSES.
GOUGH & BOYCE,
No. 76, CANNON-STREET WEST. E.C.

WHEELS.—KING'S CROSS PATENT WHEEL COMPANY (Limited).—Carriage, Omnibus, Waggon, Cart, and Road Wheels of every description made of the best materials and workmanship, on the shortest notice, for home use or exportation. Price lists free on application.—Offices, Pancras-road, King's Cross, London, N.W. near the Great Northern Railway-station.

The Builder.

VOL. XXII.—No. 1140.

The Future Capital of Italy.

FLORENCE, the capital of United Italy! This seems a brilliant destiny, yet the tidings that such was the future worked out for her were received there calmly and seriously: no popular demonstration ensued, nor did any enthusiasm manifest itself; many, perhaps, having been prepared for this change, whilst a minority (the lingering friends of the *ancien régime*) make no secret of regretting it. As to the political, military, historic, and traditional grounds on which this transfer may be justified, we need only observe that they are acknowledged (as the accordance of Italian journalism on the subject clearly shows) by the general sense of the nation. It is our object here to glance at the past and future of this beautiful city, with reference to the local change already effected, and still to be anticipated, in consequence of her promotion to such new dignity.

Looking down from the dizzy height of that stupendous tower which overtops the Palazzo Vecchio, or from the pleasant slopes of the villa-studded Bellosguardo, upon the fair panorama of the Arno valley, with the city embosomed in the midst, like a gem set in splendid framework, the feature that will perhaps most impress every beholder is the admirable harmony between the old and new, the blending and reconciling of contrasted details in the Mediæval majesty of the past and the gay prosperity of the present life. The Middle Ages are not obliterated, as in Rome; nor are they, as in many historic Italian towns, intruded before us to the exclusion of signs and tokens that bespeak the spirit of progress, the realities of a vigorous work-day existence. If, without taking the trouble to ascend to any high places, we observe the scene spread in view from the favourite promenade of the Lung' Arno quays, we cannot fail to be struck by the picturesque accord between the handsome new buildings that extend in this direction towards the Cascine Park, and the many monuments of olden time comprised in that attractive picture. The Ponte Vecchio, built by Taddeo Gaddi, 1333, with its quaint rows of goldsmiths' shops overhanging the river, and Vasari's arcades, supporting the covered way between the two once grand-ducal palaces that traverse its length; the distant and wider arches of the Ponte delle Grazie (the most ancient public structure of Florence extant, her octagonal Baptistery alone excepted, the date of this bridge being 1237), with the curious little mansions pendant at each side of its heavy piers; to our right, beyond the Arno, Baccio d'Agnolo's tower and Brunelleschi's cupola of the S. Spirito Church; to our left, the far more majestic dome of the cathedral, and Giotto's glorious Campanile glistening in the sun, as if its marble had been chiselled but yesterday; the aërial, but solid and massive tower of the palace, now more appropriately styled "of the Signoria," instead of by its former vulgar name, "the old palace,"—above, crowning the cypress-shaded hill that overlooks the impressive scene eastward, the Mediæval Italian Gothic of S. Miniato, and the historic tower raised beside it by Agnolo, still bearing marks of the injuries inflicted by the siege in 1529;—all these details, so contrasted, are yet in such manner combined as to satisfy the eyes and taste while they excite the imagination, wakening a host of associations from the memories of the "Etrurian Athens."

Shortly after the great step, decisive to her destinies, had been resolved on, a distinguished officer was sent hither from Turin, to inspect the chief public buildings, and confer with the magistracy as to the choice of those most suitable for the seats of government business and centres of ministerial affairs. We learn of the result in the appropriation of the Signoria Palace; the "Hall of Five Hundred" (*cinque cento*), constructed in 1495, for the Republican Comitia, on the suggestion of Savonarola, the original architecture by Pollajuolo (or Cronaca), completed and embellished by Vasari and Bandinelli, under Cosimo I., will become the Chamber of Deputies; another spacious and richly decorated hall, on a higher story, hitherto used by the Tuscan municipal council, will be the meeting-place of the Senate; another suite of rooms will serve for the Ministry of Foreign Affairs, in the same edifice; the Riccardi (formerly Medici) Palace, one of the noblest examples of civic architecture, commenced in 1430 by Michelozzi, about a century later receiving new details from the designs of Buonarotti, and almost doubled in size by the additions, in style truly accordant with the original, raised in 1715, after the Riccardi family had become owners—this will be the seat of two ministries, those of the "Interior" (or Home Affairs), and Finances. The modern Crocetta Palace (a spacious, but not otherwise notable residence, once grand-ducal) will serve for the Council of State; a principal section of the large convent, S. Firenze, built in 1772, for the Oratorian fathers, will be used for other public offices, as also a part of the S. Spirito Convent, one of the finest monastic edifices of this city, its outer cloister by the architect Parigi, the inner and most nobly designed one by Ammanati. Another project is the enlargement of the city, by enclosing certain suburbs, especially on the northern side, towards Fiesole; throwing down the old walls, and eventually restoring them, so that their cincture may comprise new extents of surfaces mapped out with streets and piazzas. These walls, the third fortifying girdle within which Florence has been enclosed at several epochs, as her developments successively required, were commenced conformably to decree of the Republic, in 1281; carried on but slowly and at intervals, as inferable from the known fact that the works were still progressing in 1388; and now measure in circumference, French *mètres*, 9530·62. No longer of any real utility for strategic purposes, they have, through repeated restorations, lost even the appearance of time-worn and venerable antiquity, except only on the southern side, where ponderous square towers, large ruinous turrets, and dusky curtains of rude irregular stonework still entitle them to rank among the picturesque relics of Florence's Mediæval life. In every direction are new lines of building in progress, new houses, worthy of first-class character, starting up, especially in the quarters marked by pretentions and preferences of fashion, nearest the limits of the Lung' Arno quays towards the Cascine, and around the largest piazza, built under grand-ducal government, first called after the last reigning grand duchess, "Maria Antonia," but now, with nobler meaning, "dell' Independenza." And in the style of the domestic architecture, whose claims are daily becoming more conspicuous, we are glad to observe that, even if designs be open to criticism, no uniformity is aimed at, no long fronts of showy structure present the perpetual repetition of a single builder's idea; but each mansion stands distinct, while in several (the best) examples is a laudable intention to imitate the good points of those grand old residences that so dignify this city's streets,—the ground-floor story of Tuscan stonework, with its rough surfaces and distinctly-marked joinings, the round-arched windows and doorways, the string courses or cornices dividing upper stories, the flat pilasters between windows, and sometimes interstices adorned by statuary in niches, or shields sculptured with the armorial devices of the republic and her various guilds or political parties. Besides the works for creating of the new, we have to commend others for the demolishing of the old, the removal of unsightly and inconvenient buildings, accomplished in sundry late instances; and in one example now before us, the labours, slowly indeed advancing, for the destruction of the Corsi Palace, once the residence of the nuncio;—a great heavy incumbrance, impeding the transit between the St. Trinita piazza and the renovated streets that lead to that of the Cathedral. Where these demolitions have been fatal to any structure of historic note, civic patriotism has not suffered the site to be forgotten, the memorial slab being invariably erected with the epigraph that tells where it may be recognised; as the records in the crowded Via Calzaioli of the once very prominent Mediæval tower and loggia of the Adimari family, taken down about twenty years ago for the widening of that great thoroughfare, now a chief centre of traffic and business; and another such record of the Buondelmonti palace, burnt down, in a burst of popular hatred against that family, in 1378, a portico alone being left of their residence, until this was finally removed, and a substantial modern house raised on its site (Borgo Santi Apostoli) in 1840. That appropriate and judicious method of honouring the illustrious dead by inscribed tablets to tell us where they lived, which supplies one interesting feature in Florence's streets, has of late been exemplified in several instances; and we are thus reminded of departed genius before the house of the dramatic poet, Niccolini (deceased 1862); before that where the historic painter, Sabatelli, saw the light (who died at Milan, 1850); most affectingly, for gratification to all English eyes, by the epigraph dictated with such appreciative feeling on that "Casa Guidi" made classic by the pages of our great poetess, Mrs. Browning; and by, we believe, the last-erected tablet, in the Via Porta Rossa, to the memory of the goldsmith and chaser, Bernardo Cennini, much esteemed among artists of the fifteenth century, who assisted Lorenzo Ghiberti in the workmanship of his magnificent bronze portals for the baptistery.

The various Mediæval restorations accomplished here within late years have been noticed in our pages. Generally speaking, intelligence and liberality have manifested themselves in all such undertakings carried out by Tuscan authorities. At S. Miniato, where the architectural restorations are now finished, other works are in progress for raising a quadrangle of sepulchral deposits, with round arches, to occupy an ample terrace, at a somewhat lower level than the esplanade before that church's front; and when the solemnities of All Souls' Day last attracted throngs to that fine old basilica, five designs were exhibited in the sacristy for these places of sepulture, all with the leading features of the round arch, and alternate courses of black and white marble, conformably with the incrustations of the church. Another work, truly for restoration, is now advancing to completion, at the Orphan Asylum, on the piazza of the baptistery, known by the old name Bigallo, built about 1248, and, as supposed, after the designs of Niccolo Pisano, originally appropriated for the offices and oratory of the well-known *Misericordia* Company (devoted to duties of charity, and espe-

cially to the burial of the dead). This small but beautiful edifice had an open loggia, with arcades, carried along two fronts, built up, with the worst taste, in 1697, so as to deprive the exterior of its olden character—presently, however, to be reproduced by the reopening of those archways, without any alteration to the antique features still conspicuous and beautiful on its time-worn surfaces, its front towards the baptistery being adorned with statuettes of the Madonna and Child, and two attendant saints, under Gothic canopies; also with some curious frescoes (now almost effaced) of miracles in the life of St. Peter Martyr, the Dominican missionary and inquisitor; its arcades with twisted pilasters, elaborately chiselled into decorative forms, and the archivolts surrounded by reliefs of apostles or other sacred subjects, as busts within quatrefoils. The *round* arches of this building entitle it to be considered the earliest Florentine example of a return to the Classic,—an anticipative Renaissance, indeed, in antagonism to the long-dominant influences of the Italian Gothic. Under its reopened portico is to be appropriately placed a statue of Giotto, no doubt so as to represent the great artist in imagined contemplation of his own splendid creation, the campanile towards which the angle between the two fronts of the Bigallo is turned, as a like idea is presented in the statues of Arnolfo and Brunelleschi, on the piazza before the Duomo, both gazing with upward glances on that majestic temple, their joint creation.

We should notice also the judicious restorations, just complete, after long labours, of the fine old battlemented palace, between the Lung' Arno and Piazza S. Trinita, now known as the Ferroni, but formerly the Spini residence, built by the same Arnolfo, about the end of the thirteenth century, but much altered by inappropriate new features in the last century; now brought back to a style more accordant with the original, the windows arched, and the heavily overhanging machicolations repaired in their feudal character, as first fashioned by that great architect.

We learn that the municipality intends to raise forty million francs for the proposed enlargement of this city, and that its circuit will not only be made to extend northwards towards Fiesole, but also southward, so far as to comprise the once grand-ducal villa, Poggio Imperiale, with the now garden-clothed height on which it stands, reached by a long avenue of cypresses. The appropriation of the S. Firenze convent is, as we have heard since writing the above, abandoned for economic reasons; but other convents will be required to cede portions of their ample buildings to Government uses. Hitherto monastic property throughout Tuscany has been left untouched, exempt from the law rigorously applied in almost all other provinces of the Italian kingdom; and this indulgence, we believe, is out of regard for the more friendly feeling towards such institutions that prevails, at least in this country's rural districts.

VALENTINE ART.

A new custom is gaining ground with us, that has made a large call upon artistic ingenuity of a particular kind. All at once it has become pretty general to send Christmas and New Year cards from friend to friend. These represent the season, pictorially, with little snow scenes of whitened villages and bare trees; four cross-roads, with finger-posts crusted with rime and inscribed with pleasant words of good wishing, and coaches laden with school-boys and Christmas hampers coming into view; robin red-breasts perched on stiles and palings, or hopping before latticed windows seeking wistfully for crumbs; with frosted landscape in garlands of red-berried holly. One idea only is expressed in them all,—that winter has come with its social responsibilities; but it is pleasing to note the various modes in which a mere message of "compliments of the season" can be artistically rendered. We have another custom, not quite so new, that has met with a different treatment at our hands. The Christmas and New Year card is the birth of a "fancy free" social life after the introduction of a penny postage; the *valentine*, to which we would allude, has had to work its way into favour from the early part of the century, when a letter from London to the coast cost eightpence, and to the north a shilling. With the dead-weight in the shape of postage the valentine languished for years in a sphere composed principally of cooks, housemaids, policemen, and butcher-boys; and, when not slipped under the front door in country places, in a region almost restricted to the area of the twopenny post: they have had to work their way up from Seven Dials to the West-end. The compliments of the season bloomed at the West-end, and are as yet unclaimed by Seven Dials.

If anything should be more artistic, or exhibit greater exaltation of fancy, than another, it is a valentine, the gift of youth to beauty, or of the fair to the brave and kind. With photography, chromo-lithography, and skilled pencil, such as those which our best illustrated serials display, it is a marvel that the large demand for these articles of annual sale has not called forth a supply of a better quality into the market. Those now manufactured are the laughing-stock of the witty, the foolish, and the wise alike, either for their absurdity, their tawdriness, or their vulgarity.

We have said that the valentine enjoys a rapidly-increasing consumption. The very term is a modern adaptation. The word "valentine" of old meant a sweetheart chosen by lot on Valentine's Eve. Brand, in his "Popular Antiquities," mentions that he has found unquestionable authority evincing that the custom of choosing valentines was a sport practised in the houses of the gentry in England as early as the year 1476; and his painstaking editor, Sir Henry Ellis, cites Chaucer, the Paston Letters, John Lydgate, the Monk of Bury, in corroboration of this statement. But in course of time the drawing of lots was discontinued, although chance was still relied upon as the arbitrator of destiny in the matter; and it became customary to consider the first person seen on the morning of the eventful day as a valentine. Grose explains a valentine to mean the first woman seen by a man, or man seen by a woman, on the 14th of February. In the dictionary compiled by the nephew of Milton, Edward Phillips, the word "valentine" is defined as follows:—"A certain Roman bishop, whose festival is kept Feb. 14th. Whence, among the Papists, those saints that are chosen as patrons for the year ensuing are called Valentines; and in England the custom of choosing valentines, or special loving friends among young men and maidens, on that day; about which time the birds choose their mates, and begin to couple." Johnson, 1805, defines the word as a sweetheart chosen on Valentine's Day. Nuttal's edition of Webster, 1861, however, gives the present acceptation of the term, "A love-letter sent on St. Valentine's Day." When we now speak of a valentine, we mean the love-letter last mentioned; but when we write of one in these letters, we doubtless mean as Chaucer, poet and clerk of the works, meant when he wrote,—

> "On St. Valentine's day,
> By my statute and through my governaunce,
> Ye doe chese your mates, and after flie away
> With hem as I pricke you with pleasaunce."

We have seen printed valentines fifty years old. They consisted only of long and somewhat tedious verses, surrounded by a printer's ornamental border in black ink, and looked very much like a handbill relating to the undertaking business. These staid productions heralded in the well-whiskered gentlemen in blue coats making love to ladies in flowery bowers, who for many years, in various places, served as headings to verses as tedious as those less attractively embellished. After these came different combinations of loving couples in bright raiment, frequently with arrows stuck in their breasts like modern martyrs,—with an increasing number of accessories, such as hearts strung together or detached, in flames or *au naturel*; Cupids blind-folded or looking on; Hymen's altars with or without a material sacrifice upon them; darts, torches, doves bringing notelets or rings in their beaks, &c. As valentines were approved in wider circles a more expensive kind was introduced, consisting of two layers of paper, both printed and coloured by hand. The topmost sheet, generally figured with a nosegay, was cut into a kind of paper netting, like a fly-cage, and the central part of it was capable of being lifted up by a piece of cotton or silk attached to it for the purpose, when it disclosed a pair of lovers on the lower sheet enwreathed in festoons of smoke and flames from Hymen's altar, the latter either delineated or understood according to the price. A valentine of this class costs from eighteenpence to half-a-crown. It was superseded about twenty years ago by the innovation of ovals or other insertions of white satin, laden with devices, and bordered with hot-pressed embossing to represent lace-work; or of rice paper tablets, painted like transparencies. Little tufts of moss, with sugar-plums gummed on to them, to look like birds' nests with eggs in them, formed another feature of this stage: they typified the delightful, peaceful home to which the lover invited his chosen mate. The leaves of artificial flowers next found their way into the composition, then the flowrets themselves. And now we have arrived at a semi-theatrical, semi-peepshow-like mixture of gold and silver paper, satin, gauze, artificial flowers, rhyme, colour, fancy stationery, and bad art. If we have added to the diversity of the materials, we have deducted from the size of these annuals; for formerly they were as large as a letter: they are now of the dimensions of a note.

There is a branch of valentine-art distinct from this. Besides affording a vehicle for those who wish to express real preference, valentines are frequently made use of to convey scorn and rejection. Those manufactured to meet this demand are of a cheap kind, probably from a conclusion matured in the manufacturing mind that non-admirers are not likely to spend much money over the objects of their fancied or real distaste; but they are very numerous. It must have been an ingenious person, by-the-bye, who hit upon the idea of making a large old umbrella a medium for the display of this class of valentine in the street, the kind of person invaluable at need, thrifty, clever at adaptations and makeshifts, and full of moral courage. We are familiar enough with the sight now, but it must have appeared like the proceeding of a lunatic when the originator of this idea inverted his umbrella upon the curbstone, lined it with valentines, and took his stand by it awaiting purchasers. There is a little crowd, now dissolving, now concreting, nearly all day long round these portable galleries, and even of a wet Saturday night; but the sharpest of the spectators would be puzzled to see any connexion between the coarse caricatures of human weaknesses and individual peculiarities, and the pious, charitable Bishop Valentine, or with the ancient custom identified with his name. Enormous headed and little bodied monsters, both male and female, goggle-eyed, bandy-legged, crooked, painfully attenuated, or bulbously stout representatives of different trades, coarsely printed and daubed with cheap colour, Prussian blue, gamboge and lake, are catered to suit the taste of people who wish to discompose the feelings of their acquaintances. There is not a particle of wit in any one of these so-called valentines; nothing more redeeming than buffoonery and abuse. The last season or two saw the introduction of the materials of clothing into them, and a reduction in their size. Away with them altogether!

The returns of the post-office show that there is an increase of letters on and about Valentine's day involving the use of several thousands of pounds worth of postage stamps. As there would be but few valentines that cost less than the stamp, we can make a rough guess at the large sums spent annually in their purchase. Taking this into consideration, it is clear that the production of artistic elegancies could not fail to be a profitable undertaking in every sense. It may be asked what sort of treatment we would suggest for these pictorial trifles; and we might reply, in an essay on ornament, inquiring whether the first step was a dot or a notch, and who made it. Was it some ancient warrior hitting upon a device by which to distinguish his bow or arrows from other braves who hunted in the same grand old forests, or was it the effort of some maiden in the dim, dim past to identify the coarse clay vessel in which she carried water to the huts of her people from those of other maidens engaged in the same office? If the first artist was a man, is it not likely that the first ornament consisted of notches; if a female, was it not, probably, a dot or puncture by some needle-like implement? But it is by no means our intention to do more than suggest to those whom it may concern, that there is an article of large sale falling into the hands of young people, year after year, in which there is scope for the display and remuneration of decorative skill, pictorial fancy, and genuine thought. The poets stand in favourable contrast to artists in this department. The words of some valentines, written by able pens and "ready writers" to their Dorindas, Maries, Annas, and also to their wives,—may their shadows never be less,—are as graceful as diction can make them.

We might have reserved our remarks till Valentine's Day was close at hand; but as we

write for a practical purpose, we prefer to attend to the lock of the stable while the steed is safe in hand. There is ample time for this seed of warning to bear fruit before the coming spring. If we are to have valentines at all, do let them be artistical.

GREAT GRIMSBY DOCKS.

INSTITUTION OF CIVIL ENGINEERS.

At the meeting, 29th ult., Mr. J. R. M'Clean, president, in the chair, the paper read was "Description of the Great Grimsby (Royal) Docks; with a detailed Account of the Enclosed Land, Entrance Locks, Dock Walls, &c., by Mr. E. H. Clark.

The author stated that the old dock, formed from a natural creek, measuring in extent about 19 acres, was comparatively useless, by its shallowness, and by the narrowness of the entrance channel. When the means of carrying out an extensive water commerce at the port of Grimsby were contemplated, the Manchester, Sheffield, and Lincolnshire Railway Company, who had become the proprietors of the old haven and dock, presented an extensive project to Parliament, designed by the late Mr. J. M. Rendel, which was sanctioned in the year 1845, and had since been completed. It comprised the formation of an entirely new dock, the entrances of which lay beyond the limits of low water, the new works being advanced into the River Humber, for a distance of three-quarters of a mile, and embracing an enclosure of 138 acres of land reclaimed from the river. The works of this enclosure were commenced in the spring of 1846. They comprehended the construction of wharfs, embankments, and a coffer-dam, together nearly 1¼ mile in length. The coffer-dam was remarkable for its magnitude, exposed position, and independent stability. Considerable difficulties were encountered in several places in obtaining a firm foundation for the wharfs and embankments; but these were successfully overcome through the exertions of the late Mr. Adam Smith, the resident engineer, principally by loading the soft ground with chalk stone. The enclosure was completed by the end of the year 1848, when the interior works were commenced. These comprised the construction of a dock of 25 acres, with a depth of 6 ft. at low water, and of 25 ft. 6 in. at high water, ordinary spring tides; of two entrance locks to the dock, the larger one being 300 ft. in length between the pen-gates, and 70 ft. in width, and the smaller one 200 ft. in length by 45 ft. in width; and of a tidal basin of 13 acres, enclosed by timber piers, with an entrance 260 ft. in width. There were also extensive timber-ponds, a graving-dock with a width of entrance of 70 feet, and on the quays, which were 3,600 ft. in length, transit sheds and bonding warehouses, granaries and cotton-sheds, cattle-pens and coal-spouts, with a railway passenger station, and branch railways through the warehouses, besides a small dock, for fishing craft, 6 acres in extent, and having an entrance 20 ft. in width, with the usual appurtenances connected with that trade.

The contractors for the coffer-dam were Messrs. Linn, of Liverpool; and for the dock works, Messrs. Hutchings, Brown, & Wright.

The coffer-dam* was 1,500 ft. in length, and consisted of two circular arcs, with a straight return on the west side, the versed sine of the curved portion being one-fifth of the span. It was situate where the average velocity of the tide in the River Humber was five miles per hour, and the rise of tide was 25 ft. There were three parallel rows of whole timber sheet piles, of Memel fir, averaging 60 ft., 47 ft., and 37 ft. in length respectively. The piles were driven in bays of 10 ft., and there was a space of 7 ft. between the outer and the middle rows, and of 6 ft. between the middle and the inner rows. Clay puddle was filled in between the rows. The tie-bolts connecting the rows of piles were arranged so as to break joint, to prevent a run of water directly through the dam. The chief novelty was, however, in the counterforts, or supports, placed at intervals of 25 ft. along the whole length of the dam, and extending for 18 ft. in depth, so as virtually to give the coffer-dam a base of 32 ft. in width. The counterforts were composed of whole timber sheet piles, and were firmly attached to the dam, by wales and struts. The total quantity of timber used in the dam amounted to 709,000 cubic feet, and its construction occupied two years and a half.

The wharf extended from the old dock entrance to the west end of the coffer-dam, a length of 2,431 ft., and from the east end of the coffer-dam eastward for a length of 1,208 ft., where it was joined by an embankment 1,800 ft. in length. The wharf was constructed of a single row of whole timber sheet piles, with a dry rubble wall of chalk stone at the back, in the centre of which there was a puddle wall.

The embankment was composed of the stiff clay thrown up from the foreshore, and was faced with chalk stone on the seaward side, which had a slope of 5 to 1, while on the inland side the slope was 2 to 1.

The two entrance locks were separated by a pier of masonry 70 ft. in width. Each lock was provided with two pairs of pen-gates and one pair of flood-gates. The ground over the whole area of the locks, centre pier, and wing walls, was excavated to a depth of 8 ft. below the cill of the larger lock, and bearing piles were driven in rows, 5 ft. apart from centre to centre, and in some places 4 ft. apart from centre to centre, over this area. A pile was considered to be sufficiently driven when it did not move more than a quarter of an inch with a blow of a ram weighing 1 ton, and falling through 12 feet. The heads of the piles were then cut to a uniform level, the ground was removed to a depth of 2 ft. below this level, and this space was filled up with concrete. Whole timbers, so connected as to form continuous ties across the locks and centre pier, were then laid transversely, in parallel rows, on the bearing piles. Other similar timbers were laid at right angles to the transverse bearers, concrete being filled into the upper surface of these longitudinal bearers, which were then covered with planking, to serve as a bed for the masonry. Upwards of 254,000 cubic feet of timber, in addition to the sheet piles, were thus employed.

The masonry of the pointing cells, gate-tables, inverts, aprons, platforms, square quoins, and culverts, was of Bramley Fall stone; the hollow quoins were of stone from the Calverley Wood quarries; while the backing to the walls was of chalk stone, hammer dressed, laid in regular courses, and well bonded with the ashlar. The inverts and platforms for the gates were wholly of stone; the cills were straight, and the joints of the masonry radiated horizontally and vertically, corresponding to the radius of the inverts. There were three main culverts, one in the centre pier and one in each wall of the larger and smaller locks, communicating with the dock, with branches and outlets to these culverts, for filling and emptying the locks, for scouring the entrance channel, and for clearing the gate tables.

From the treacherous nature of the ground on the site of the proposed dock walls, and from the necessity of obtaining good foundations for the granaries and transit sheds, Mr. Rendel decided to form the walls of piers, varying from 40 ft. to 80 ft. in length, and generally about 6 ft. thick, built of chalk rubble masonry, faced with ashlar, the space between the piers being arched over with brickwork. The backing of the walls consisted of a slope from the back part of the arch to the dock bottom, with a batter of 2½ to 1, composed of puddled clay, faced with rough chalk stone.

Blue lias lime, from Lyme Regis, was used in the preparation of the mortar. It cost, delivered at Grimsby, 10s. 6d. per ton. The mortar was of two kinds; the proportions of that employed for pointing and facework were, ten parts of slacked lime, eight parts of screened sand, one part of forge ashes, and one part of pozzuolana. The other, used chiefly for the backing of walls and buildings, was composed of sixteen parts of slaked lime, twenty parts of screened sand, three parts of forge ashes, and one part of pozzuolana. The cost of the former was about 16s., and of the latter about 12s. per cubic yard.

The gates were of timber, chiefly of oak from the Black Forest, but teak and mahogany had been used. They were regular trussed girders, each pair of bars being trussed by wrought-iron straining-rods. Each leaf of the gates for the 70-ft. locks weighed about 75 tons; and when completed, in 1850, they were considered to be the largest timber lock-gates ever made. It having been found on trial, when the large gates were being erected, that the ordinary roller, fixed on the outside, was out of the vertical plane passing through the centre of gravity of the gate, causing the gate when moved to twist considerably, it was determined to have two rollers, one on each side of the gate, but both to travel on the same path. The inner one was necessarily of smaller diameter than the outside one, and a cast-iron box was provided for the inside roller to fall into when the gates were closed. There was a false door at the back of this box, and when any hard substance was forced against this door, a bar at the back was broken. During the twelve years these rollers had been in use, these bars had only required to be replaced about twelve times in the three pairs of gates. The gudgeon on which the heel-posts of the gates revolved was of solid cast-iron, and the cup which fitted into the horn of the heel-post was of the same material, but in the top of the cup there was a piece of brass of a converse shape. The pointing cills of the gates were straight, and corresponded with the bottom bars of the gates. They were protected by cast-iron face-plates, jointed and planed so as to form a perfectly water-tight joint. The cost of a pair of gates for the larger lock, 70 ft. wide, was 2,300*l.*, exclusive of the machinery for working them. This was the first instance of the application of Sir W. G. Armstrong's hydraulic machinery for opening and closing lock-gates, and its cost for the six pairs of gates in both locks was about 4,000*l.*, including foundations and cast-iron pits for the chains to work in. Two men only were required to work the gates of both locks, which could be opened in two minutes and a half; and the machinery, which had now been in use for ten years, had required very few repairs, and had answered admirably.

The piers forming the boundaries of the tidal basin were of open timberwork, constructed in bays of piles in clusters, each bay being 25 ft. apart. The whole of the timber had been thoroughly creosoted, at the rate of 15 gallons of oil per load of timber. The channel from the mouth of the basin to the entrance locks averaged 260 ft. in width, and was kept to the level of the lock cills by frequent scouring, and by occasional dredging. Immediately outside the tidal piers the channel was 3 ft. below the level of the larger lock cills, and the scour of the tides past the pier-heads had gradually deepened the channel since the construction of the dock works from 3 ft. to 4 ft. In addition to the means provided for sluicing the silty deposit from the channel of the tidal basin, the back water from the country, which originally flowed into the old dock channel, was now diverted into the tidal basin.

A graving-dock had been constructed since the opening of the new docks, with a width of entrance of 70 ft., the cill being laid at the level of 6 ft. above the cill of the larger lock, giving an average depth of water of 19 ft. 6 in. The length of the dock for keel was 350 ft., the width of the floor was 52 ft., and at the level of the coping 96 ft., tapering to 84 ft. at the ends. The area of the dock was surrounded by a row of Memel fir sheet piles; and rows of piles were driven in the centre line of the dock, to support the weight of the ships when blocked. The ground within this area was removed to the depth of 6 ft., and was replaced by concrete. The inverts and gate tables were of Bramley Fall stone, and the joints were radiated both vertically and horizontally. The floor was curved, instead of concave or flat, as was the usual plan; thus giving greater space for the workmen, and allowing of better ventilation round the sides of the vessel. The sides of the dock were in nine steps, each step being 3 ft. in height, with a width of 3 ft. The graving dock was supplied with water direct from the Royal dock, and was drained to the level of low water into the tide-way; but as the floor of the dock was 3 ft. below the level of low water of ordinary spring tides, a depth of water of from 3 ft. to 4 ft. had to be removed by pumping. This was effected by a centrifugal pump, supplied by Messrs. Simpson, fixed in a well adjoining the dock; and its cost complete, including pipes and erection, was 413*l.* These pumps were deemed to be very suitable for the drainage of graving docks, as they were not liable to become choked, like valve pumps, from the chips and rubbish which found their way into the well. The gates were of oak timber, and were similar to those of the locks, 70 ft. wide. They were, however, worked by powerful double-purchase crabs, instead of by hydraulic machinery, as being so seldom used in comparison with lock-gates, it was considered that this plan would be less expensive. The total cost of the graving dock, including the engine-house and well, but not the engine and pumps, was 32,000*l.* It was designed by Mr. Adam

* A "Description of the Coffer-dam at Great Grimsby," by C. Neate, is given in the Minutes of Proceedings, Inst. C.E., vol. iv., p. 1.

Smith, and was constructed, under the superintendence of the author, by Mr. J. Taylor.

Two lines of railway, laid on a timber staging, ran into the dock, having coal spouts at their extremities. These spouts, or wrought-iron shoots, were fitted with hinged joints, and were capable of being raised or lowered, by winches, to the height of the deck of the vessel. There were doors in the bottoms of the coal waggons, and breakage of the coal was in a great measure prevented, by a door being fixed inside the spouts, hinged to one of its sides, and connected by a chain with a winch above, by which the rate of the coals entering the vessel was entirely under control. The waggons, when emptied, descended by their own gravity down the return line. About 100 tons of coal per day could be loaded at each spout.

A tower, having a total height of 300 ft. was erected, and in this, at a height of 200 ft, a wrought-iron tank was fixed, capable of holding 33,000 gallons, for the purpose of serving as an accumulator of water pressure, for working the machinery of the lock-gates and cranes, and of supplying fresh water to the shipping. The water was forced into the tank by two pumps, each 10 in. in diameter, worked by a duplicate horizontal engine of 25-horse power. The engines, pumps, pipes, and machinery, were supplied by Sir W. G. Armstrong.

THE SKETCHES AND STUDIES OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

The third Winter Exhibition of Sketches and Studies by the members of this Society now exhibiting at their Gallery in Pall-mall East is as attractive — to appearances that include admiration for most of its component items and the avidity with which everything buyable is at once bought—as usual; and as instructive, when such instruction is necessary, in the exemplary patience and painstaking evinced by those who, having the means at their fingers' ends of expressing a life-long intimacy with such phases of nature as they may wish to illustrate, still most humbly devote themselves to the closest observation and imitation of them, year by year.

But in these times a great number of our best landscape productions are strictly and confessedly studies unalloyed by any such dross as the imagination, or that poetical adaptative element which formerly established an individuality of style in treating similar objects, and invested them with an autographic, dissimilar yet equal, value now unknown, except where the elders of the profession afford instances that provoke the remark by the unapproachable position they retain, and where a very few of the younger show any signs or promise of possessing it.

Photography has been a wizard, who, disclosing such views and representations as defy denial, though working with a negative, has been too widely accepted as the all-in-all friend of the artist,—as one in whom he has but to confide positively and be successful; but if the conjuror happen to burst upon them one day in his own and true colours, they will find their occupation gone, and their reflections fixed by a new process not fugitive enough this time, involving as it would a new theory and a new practice.

However, the present collection of works, whether sketches, studies, or finished pictures, offers inducements to the most fastidious, whose tastes make them frequenters of art exhibitions, and whose appreciation of old acquaintances is enduring enough to withstand any craving for novelty; and there are some good things of which some never tire, let the adage say what it will to the contrary. Still, allowing that it does partially apply, and considering the little significance that can be attached to any attempted distinction, or, at least, sufficiently achieved distinction, between the two presentations of the year, it might be suggested, that on such occasions as these the members could well afford to share, and might offer opportunities to others not of the Society to contribute works; or better still, offer prizes to graduates in their art, if only bronze medals, since acknowledgment by them would be honour enough for many who, it may be supposed, would avail themselves of a liberality that would benefit the profession, and help to augment their own strength presently.

Of course, it would be unreasonable to expect that from such adventitious aid anything more than variety and freshness could accrue; but how valuable that would be where the repetition of the one unvarying bill of fare promises satiety, even to the greediest at the feast, however appetible and delicious it might once have been, and where the stereotyped emanations season after season render it impossible to make other than the stereotyped remarks upon them, and make it seem an absurdity to expatiate again and again upon merits that are no longer questionable.

What can be said that has not often been said before of the life-like impersonations, whether cavalier or rustic, that Mr. Frederick Tayler delights in portraying, with the purest and most forcible appliance of the medium possible; for who is there that can so strictly educe the legitimate resources of water-colour in all its luminous qualities, and find in it such means of expressing so perfectly any desired result,—or of the consummate ease with which he can foreshorten horses, seat his riders, and indicate heathery hills, open daylight, and air? or of Mr. Gilbert's picturesque adaptations of a dexterity and talent quite his own? or of Mr. Carl Haag's Eastern heads (197), "Abyssinian" or (188) "Bedawee," and his love for gorgeous colour, as may be seen in (212) "Un Procuratore di S. Marco, Venice," tending to exaggeration in his otherwise admirable architectural drawing (91), "Study at Genazzam, Sabine Hills?"

It is just as impossible to find fresh words of laudation for Mr. Dodgson's studies at Knole, or for his exquisite scene (190) "At Sonning, on the Thames," so suggestive of hot sunshine, the hum of insects, and the tinkle of distant sheep-bells; or for Mr. E. Duncan's faithful and beautiful combinations of earth and sea, and ships in all kinds of weather, as to set in new eulogy Mr. Birket Foster's little gems of a natural worth, indigenous as well as imparted, if they needed it, for he has the rare gift of judicious selection, or the rarer acquirement of alchemy. (107) "Saved, the Sketch for the Drawing exhibited in the Gallery, 1864," by Mr. F. W. Topham, leads to fresh embarrassment; it is too good, and seen too soon after its more matured double, not to assist materially in confusing the occasions of their exhibition. Mr. Burton's (22) "Study in Chalk," from a fine model, is superlatively executed, and, like all he does, marked by a refinement that in no way interferes with the most conscientious representation of what he sees, as the interior of a very primitive "Church near Rothenburg" (98) will bear witness to. Although Mr. E. Lundgren has more important testimony of sound abilities in some well-finished and powerfully-coloured productions, we like nothing the less his clever sketches of children in (94) "Arab School;" and Mr. F. Walker quite keeps pace with the expectations formed of him, that he will prove a great acquisition to the ranks he has just fallen in with. His "Study of a Garden" (401), with its elaborated flowers and shrubbery, through the gate of which a postman is delivering a letter to a maid-servant,—for designative incident, is wrought with marvellous care and effect, and with his "Sketch for Subject, from Denis Duval" (420), where the hero is having his hair dressed by his mother, betoken power and accomplishments of very high order.

Mr. E. B. Jones must be seen in colour to meet with due appreciation of his merits, his several studies for draperies and quaint realizations, making every allowance for a grotesque approach to grace and exalted feeling, have somewhat the appearance of not over-successful copies made in the print-room of the British Museum or Royal Academy, when the use of bread and india-rubber was prohibited, rather than the result of an untrammelled evocation of an original conception and peculiar conviction. But looked at apart from their surroundings as intended for Mediæval decoration, their value is much more easily recognised, and their aptitude understood at once.

In despair of characterizing the works collected in any but a general assertion of their excellence, it is only necessary to state, that all the contributors deserve a share of the credit attached to the amount of industry and proficiency displayed; but it may be questioned whether, in the interest of those amongst whom the responsibility of celebrity subsists to so widely-acknowledged an extent, they are wisely advised in exhausting themselves by a double tax upon their exertions, and unassisted by any peculiar features of attraction, how far they may be justified in expecting the untiring attention of the public for so many months in the year, without entailing serious disadvantage at last.

COLD SLAKED LIME.

BEATEN FLOORS.

With reference to the communication signed J. C., in the *Builder*, p. 868, as to the use in this country of lime that has long been slaked, it would be a service to the readers of the *Builder* to indicate the localities in this country where this process has been adopted, and the geological position and chemical composition of the limestone employed. It is stated that in Dorsetshire this mode of preparation is now made use of; but all information on the subject will be of value in proportion to its precision.

The lime referred to as used in Southern Italy is not of a hydraulic nature. The country is for the most part deficient in good sand; and a pure silicious grit would no doubt be preferable to the substitutes employed.

There is, however, one volcanic production of great value to the builder, that which is known by the name of "*lapilli*." This material occurs in thin veins in the tufa or superincumbent soil; it is of a pure white colour, has the gritty feeling of coke, and yields a ringing metallic sound when struck. It would, no doubt, make very excellent mortar; but it is of too much value to be thus used, as it is set apart for the construction of the beaten floors or roofs common in Southern Italy.

To form these floors a mixture is made of lime and "*lapilli*," of the consistence of very fine concrete. A palm (10 in.) or a palm and a half of this concrete is carefully spread over the levelled surface which it is to cover, and about a dozen men, or more if the floor is large, then commence a continuous operation of a nature that would be considered an intolerable nuisance in any English town. Each of these men is furnished with a low chair, usually rush-bottomed, and with a wooden beater, some 2 ft. long, and 3 in. or 4 in. square. Sitting in a line, these men keep up a constant hammering at the floor, which they carry on for a fortnight at least, the work being covered with straw when they leave off for the night, and an inch or so of fresh material being laid on from time to time. The men do not work their beaters as paviors in England use their rammers, but bring them down with a hard *slap* on the broad side, stooping forward in their low chairs so as to sit much as a gorilla does on a tree. The din is most deafening, and can be heard at a great distance; and few things can be more appalling to the invalid than to see a row of rush-bottomed chairs make their appearance on a neighbouring roof, or to be awakened at four o'clock on a keen May morning by the sound of a tapping at first delusively gentle, but which will turn each nerve of the system into a medium of torture before the late hour at night when the beaters are allowed a brief repose.

The sufferer becomes soon aware that the annoyance is permanent. Next he becomes able, if of a mechanical turn of mind, to estimate the increasing solidity and hardness of the floor by the increasing sharpness of the reverberations. Brief lulls in the work, or sudden softening of the sound of the blows, will from time to time inform him of the application of a new bed of concrete, or of the use of the water-pot over the surface already formed. Day by day the noise becomes more intolerable. The workmen, moreover, instead of appearing at all to regard the neighbourhood with deprecatory humility, seem to take a fiendish delight in the tortures they inflict, and for the most part there is to be found among each gang of beaters one endowed with a stentorian voice, who overtops the noise of the blows on the much-enduring floor by that savage howl which is so well known over Southern Italy,—a howl which each performer utters in precisely the same cadence and measure, but in which no ear but that of a Neapolitan can distinguish words. A repetition of this dolorous chant for six or seven minutes is usually succeeded by a shrill scream from all the workmen, either in unison or in succession, and then for two or three minutes more you are relieved by hearing no sound but that of the beaters.

The floor formed by this savage process is one of great excellence. It is smooth, hard, and enduring, and is quite water-tight. In buildings of a superior class, more attention is given to the process than in ordinary cases. The concrete is finer, the successive layers are thinner and more numerous, and the operation is more protracted. A surface is thus formed upon which the painter is set to work, either to cover it with some deep shade of colour in harmony with the

papering or other decoration of the apartment; or to trace designs and patterns. A few scraps of carpet only are required to be laid on these painted floors in the summer; and the expense of the upholsterer is thus diminished by the builder. In winter more carpeting may be used, but this is by no means always the case.

In a country where the energy of insect life, and the destructive effects of a parching summer render it matter of great importance to use as little woodwork as possible in domestic architecture, the beaten floor is probably the best substitute for boarding. It is more durable, more handsome, more smooth, than any other kind of floor, except marble; and probably cleaner than any other except marble or glazed tiles. It cannot compare with the luxury of a marble floor in hot weather; but marble is confined by its costliness to the mansions of the few who can afford it; and, by its weight, in most instances to the ground-floor or staircase. In a lofty room with a marble floor, the hottest weather known in Europe is not only tolerable, but delicious.

The beaten floor has not the cooling effect of the marble, and it has a tendency rather to fatigue the feet, and with some persons to produce the sensation of burning in the feet; but it has not nearly the fatiguing effect of an asphalte floor. In this country it might be used with advantage for railway-station platforms, large halls, or ball-rooms; but the intolerable character of the process thought necessary to produce it is likely to prohibit its introduction in any place where a nuisance is indictable.

"LIME ABROAD AND AT HOME."

MY experience being somewhat at variance with the statements put forward under this and a like heading in the last two numbers of the *Builder*, it may, perhaps, be worth giving. The mode described of making mortar in Southern Italy has been practised in this country, time immemorial. A pit is dug in the ground, maybe 30 in. deep, large enough to contain perhaps a one or two horse-load of lime. Water is put into the pit, the lime is shovelled in gradually, while at the same time it is stirred to and fro with a mortar-fork, and so on till the whole is dissolved to the consistency of thick cream: the stones of course settle at the bottom, and when the lime subsides the water is run off. In a short time a firm bed of putty is ready to make mortar of, then or at any time within six months, if the lime-pit be protected from rain and sun. Of course a hard film or protective coating forms itself on the surface: under this the lime remains fresh and mellow to almost an indefinite length of time. Of mortar made with lime so prepared, I can testify from twenty years' experience to its hard-setting and durable qualities. It has never occurred to me to test exactly the qualities of this as compared with any other mortar prepared from fresh-slaked lime; but I may observe that the practice of making mortar from lime-putty, and in the rough and ready way above described, seems to be dictated by necessity rather than choice. It prevails chiefly in the country where, from the great distance it has sometimes to be carted, it would be impracticable, for ordinary building purposes, to have fresh-slaked lime on every occasion. W. M.

THE BUXTON LIME.

IN answer to some remarks in your paper as to the desirability of slaking lime some time before use, I may state that the Buxton lime, used in the neighbourhood of Liverpool, is generally run in a pit before the building commences, enough being run to finish the job, and is not submerged in water at all, as spoken of by your correspondent as being advisable. Indeed, the longer it is kept the better it is; and for plasterers' work, it should be run at least one month. This makes excellent mortar; and if the sand is clean and sharp, and the lime is fresh-burned, and run through a grating in a wooden box with a flood-gate, and the mortar well mixed and punched with a punner (something like a paviour's rammer), nothing better could be desired.

A LIVERPOOL ARCHITECT.

P.S. For pressed brickwork, the mortar is generally hand-punched through a sieve.

VENTILATION.*

NOTHING could be more opposed to the ascertained principles of modern science than the arrangement of our ancient Mediæval towns. The good old architects and builders seem to have had no more idea of levels than they had of nerves! Go-ahead men, they planted their cathedrals on a piece of table-land on the summit of a hill, and they drawled their streets up to it, house by house, irrespective of the conformation of the ground. The streets were apparently made for neighbours from opposite sides to shake hands with each other. Story after story of their houses projected over the other, as if the sun were a nuisance and fresh air a poison. Steps would not unfrequently *go down* to their dwelling-rooms, and it was quite a customary thing for the privileged free burgess to be able to touch every ceiling in his house!

We in Newcastle rejoice in the possession of many of these relics. The Broad Chare—nearly 15 ft. broad on an average—and other chares and courts, we can boast of. But what have we to lament? In these neighbourhoods—and I refer now more especially to those avenues which branch off from the Stock Bridge to the Quayside—there is an atmosphere in which oxygen and nitrogen form but a very small proportion. The sun never penetrates these localities; they are uniformly damp, I may say *wet*; a peculiar slimy mud adheres to everything about, even the walls on either side for at least a yard upwards; and the *smell*—the peculiar smell!—not exactly the "concentrated essence of sink," but a dilution of street sweepings, sewer exhalations, and decomposing—what in the vernacular is called—"clarts!" And yet our merchants have their offices in some of these places! It is not surprising that many of them die before attaining the meridian of life.

It has been said that, for longevity, these localities will hold their position amongst the best in the town. That may be. But why? Among the poorer classes the delicate all die off in infancy or youth. Naturally of a hardier constitution than those who are the offspring of the delicate as well as the strong, when they do become acclimatized—and nature is very accommodating to the healthy—they not unfrequently become octogenarians, or centenarians. But how many fall in youth and in manhood. Perhaps they do not average twenty-five years taken altogether! As illustrating the anomalies of nature, I remember reading in the *Builder*, many years ago—to the editor of which publication I am indebted for more than my interest in ventilation, and to whose pages during the preparation of this paper, I have had occasion to recur—of a woman who resided in London, and fell into ill-health: her medical adviser ordered her into the country for change of air. She went. But she grew gradually worse day by day. After careful consultation, it was found that in London the front door of her house opened upon the gully-hole of a drain; the ammonia from which was indispensable to her comfort and her health. Of course—as the tales have it—she lived there ever afterwards. But is that a good reason why every front-door should be placed opposite a gully-hole?

London, Paris, Liverpool, Edinburgh, Newcastle, and other *par excellence* architectural towns, in modern times, have adopted the objectionable plan of building their houses in a quadrangular form, inclosing a space in the middle. The objection to this is, that a free current of air cannot traverse from end to end of the space so inclosed. The new parts of Sunderland furnish the best street-ventilating plan that I have yet seen. Both back and front are open. There are no archways, inclosing yards, midden-steads, privies, and filthy back lanes: the eye extends from one end to the other. And next to ventilation, *light* is a capital thing.

I feel it my duty to draw attention, at this point, to the fact that in this town—more especially in the higher portions of it—the drains are all untrapped, and consequently become ventilators of nuisance, smells, and disease; and that the streets, being badly swept, give out a large amount of ammonia, owing to the overfilling of the manure-carts. Go up Northumberland-street and neighbourhood any morning before ten o'clock, and you will find litter from stables spread over a few thousand yards, sufficient to create an epidemic. And when the *horse fairs* are held in the town, why, it is not only dangerous in more senses than one, but immoral.

Open spaces in towns must greatly facilitate ventilation; and where these are planted with trees, shrubs, and flowers, as the squares of London are, they must be of great benefit to the neighbourhoods; for trees absorb carbonic acid, and give out oxygen.

Once upon a time, before Newcastle was deluged with smoke, the green grass and the tall poplars of the Forth were an attraction to the inhabitants. Now, a large railway-station occupies its site. To whom did it belong? I mean the Forth with the grass and the trees. It belonged to the people of Newcastle; and, if I am not misinformed, the corporation who sold the people's land said, when they did so, that they would provide another place equally useful and equally beautiful: but have they done so? Where is it? Is it on the Leazes or on the Moor? No; and the freemen—unkind both to man and beast—won't allow a tree to be planted or a shrub to be grown there! They have hundreds of acres, all of which are surrounded with trees—a proof that trees will grow in the vicinity of Newcastle; and except the water-rush, nothing but third-rate grass vegetates on these fine and extensive lands. Professor Johnston says, "Every green leaf that waves on field or tree, sucks in, during the sunshine, carbonic acid from the air. It is as indispensable to the life of a plant as oxygen is to the life of the animal." But are there trees within Newcastle to do this? Once the garden of the north, with its bowing branches falling into Tyne, it has become a withered Eden. The hawthorn, sturdy plant as it is, cannot produce its "May;" the poplar withers up like a birch rod; the Durham birch, which will grow anywhere, has ceased to live; and the American poplar is wan ed and crusted before it is three years old. Our apple and pear trees—where are they? Our corn-fields—what have they become? With coals, and iron, and salts, and alkalies, we shall become impoverished in oxygen, health, size, vigour, and strength.

The injury arising from living in atmospheres impregnated with smoke, the products of alkali works, and other manufactures, is probably more than we suspect. I well remember that, when the old pit-heap used to burn at Monkwearmouth, when the wind blew from the north or north-west, the silver plate of the inhabitants of Bishopwearmouth, in one night, would look like dull aluminium gold! And only last month I happened to be at St. Helen's, in Lancashire, when a wind blew fair from the numerous alkali works to my sleeping-room window, and I found to my surprise that my watch and studs were coated with a dull—something I do not know the name of. Yet, I breathed that atmosphere. I wonder if my lungs were coated also? In a population of 150,000 persons, and in a district where coal is comparatively cheap, and where it is the custom to have large fires and large fire-grates, nothing so economical and also so beneficial can I recommend as what is popularly called "the *Builder's* fire." I have adopted it for the last few years, and I think with great advantage: I am *certain* that I have done so in my office. The process is this:—"Cover the bottom of the grate with a plate of sheet-iron. This alone will save more than one-fourth the coal, and preserve a better fire. At a cost not exceeding 1s. the experiment may be tried. The saving will be more than half this in each week." I can certainly affirm that, whereas a coal-scuttle was most essential to keep the fire alive up to six o'clock in the evening, I now need no such thing; and I have, moreover, a fire that can burn from six to eight hours without stirring (with Newcastle coal, too), and from which no smoke of any importance ascends. The fact is, as the fire burns *downwards*, it consumes the carbon, and hence there is no smoke. I now come to

Our Dwelling-Houses.

After a dry foundation to a dwelling-house, a free circulation of air underneath is the next best thing. I once had the misfortune to live in a house in the centre of which was discovered an unused well; and to worship in a church in which a huge rubble drain crossed, which at times gave out a hazy rainbow appearance. And I have seen grass growing under sitting-rooms, shavings decomposing under floors, and earth heaped up against the outside walls of a house nearly up to the window-sills. Cesspools have been known to be within the open yard of a residence, in which also was to be found a well of drinking water! I once saw,—I must admit that it was many years ago,—a donkey that

* From a paper by Mr. Oliver, read at meeting of Northern Architectural Association, as mentioned in our last.

lived under the stairs which opened to the room! On the one hand, in cosey, old-fashioned houses, we see the tidy-looking sand-bags on the sitting-room windows, to keep out the dust and the draught; on the other hand, we see the modern middle-class Mrs. M'Clarty shutting up her rooms till they are fusty, and opening them only on special occasions for the pleasure and benefit of her visitors! She "could-na be fashed" to open doors and windows, and to dust the furniture every day: besides the things get soiled and destroyed.

Bad as this may be, it is nothing to the danger to be apprehended by closing the fireplace in sleeping apartments. I have heard the remark more than once, "Oh! it is *only* a bed-room!" As if it were no matter about the room in which one spends the larger portion of one's life. Conceive of a room with a bed and a sleeper in it: sand-bags are on the windows; the keyhole is stopped up with paper or rag,* and the fire-board nailed against the fireplace. On the supposition that the air of the room has been changed during the day—and I believe the air of some rooms has not been changed for months—the sleeper inhales the oxygen and exhales the carbonic acid. As he sleeps the poison rises upwards, fouling portions of the pure air as it ascends. From the ceiling, as hour by hour passes, the foul air gradually accumulates and forms a stratum thickening with every respiration. In his bed, perhaps requiring steps to get into it, and with drawn curtains, the deadly poison lowers itself until it comes in contact with his face. No fireplace opens its throat to carry off this poison; no window crevice sends in a draught of air to supply the exhausted oxygen. Let him lie on but a few hours more, and the insidious gas will lull him to a deeper slumber,—till—if Providence prevent not—he sleeps for ever! Such a case occurred only last year at East Hampstead, on the estate of the Marquis of Downshire. Three men slept in a room 10 ft. 10 in. by 8 ft. 10 in., and 6 ft. 7 in. high. In the morning one was found lying face downwards, dead. The surgeon deposed that he believed death had arisen from suffocation, and from the unwholesome air of the room.

Bed-room windows should be opened the first thing every morning, both top and bottom. They should remain open all day, and if possible a little all night. There is a great deal of unreasonable prejudice about night-air. Miss Nightingale, in her admirable "Notes on Nursing," observes, in reference to night air, "What can we breathe at night but night air? The choice is between pure night air from without, and foul night air from within. Most people prefer the latter. What will they say if it is proved that fully one-half of all the disease we suffer from is occasioned by people sleeping with their windows shut? An open window most nights in the year can never hurt any one. In great cities, night air is often the best and purest air to be had in the twenty-four hours. One of our highest medical authorities on consumption and climate, has told me that the air in London is never so good as after ten o'clock at night." A few years ago, I had occasion to spend the night with a professional brother in the neighbourhood of Manchester. He informed me that he always slept with his bed-room window open. The way that he became accustomed to it was this: when on a sketching tour in Norfolk, the only lodgings he could get in the village were at a small cottage. His sleeping apartment boasted of two small windows, in both of which was a broken pane. Although it was cold weather, he informed me that he found it so pleasant and agreeable, that he had adopted the plan ever since. The varying temperature between night and day, summer and winter, bad weather and good, is in harmony with the laws of our constitution. "Nature," Miss Nightingale says, in her "Notes on Hospitals," "affords air both to sick and healthy, of varying temperature at different hours of the day, night, and season, always apportioning the quantity of moisture to the temperature."

It is a pernicious habit, too, to "make the beds," as it is termed, before being ventilated or aired. Bed curtains should be abandoned; gas should be sparingly used; blinds that darken the window should be substituted by light ones; shutters of course are inadmissible; overcrowding with children or otherwise should not be allowed; and plenty of pure air should always be a guest in your chamber.

* Dr. Arnott mentions an instance where he saw this done.

I am indebted to our local inspector of nuisances for the following:—"On the 29th of June last, at half-past two p.m., with fine weather, a moderate temperature, and very little wind, out of 415 bedroom windows in the neighbourhood of Northumberland-street, only 111 were open, and not one-third of these were open top and bottom!"

When her Majesty took up her abode at Windsor Castle, Mr. Rawlinson states, "the whole drainage of the castle was passed into the cesspools; upwards of fifty of them permeating the base of that building. There was not a single window in any of the Royal apartments that could be opened from above, all the fresh air being obtained by small casements. The basement of the castle was rooted up to its foundations. The vile cesspools and abominable drains leading into them were removed. The windows were all made to open by an apparatus ingeniously contrived, by which a lady, with a key not much larger than a watch-key, could open the windows from above."

Before leaving this portion of my subject, I wish briefly to refer to the ventilation of water-closets. Perhaps no greater source of disease exists around us than these. Under our staircases, beneath a sleeping-room, almost always within the thick protecting walls of a house, they act as ventilators to the drains, and vomit forth both day and night a pestilential atmosphere, adulterating, more or less, the whole air of the house. Water-closets should, where possible, be built out, and be shut off by double doors. A small loophole of a window is not sufficient to create a draught to carry off all the impurities that arise: there ought to be two windows, opposite to each other; and where thorough ventilation cannot be secured, disinfecting agents ought to be resorted to, such as chloride of lime, or Dr. Bishop's sanitary powder. "Many gases," says a writer in the *Medico-Chirurgical Review*, pass through fluids and so-called solids. Hydrogen gas and its compounds easily pass through the pores of stucco; so that plastered walls or ceilings are no barriers to the diffusion of cesspool emanations."

I fear I have already exceeded the time I had intended to allow myself, and I shall, therefore, only very briefly refer to one or two other subjects before reviewing the several systems of ventilation, and the patents taken out by inventors. I now refer you to our public buildings. Courts of law are notoriously badly ventilated. Very cold looking in the morning; sweaty about noon; suffocating at night. Our churches and chapels are now nearly all pretty well ventilated. Censorious people, when these buildings are overcrowded, always complain of the want of ventilation; and when not over well filled, complain of the cold and draught. As if an architect, or any other person, could, with limited means, so arrange the ingress and egress of air, that as each person entered the building, his share of air should enter also, and an additional opening be made for its exit! Public halls and hospitals, though ventilated in the present day on essentially different principles, are nevertheless now found to be both comfortable and healthy. I regret my time will not allow me to refer to the ventilation of hospitals. I may observe, however, that the best ascertained mode of ventilating, is that by open windows and open fire-places. When you go to Paris again, let me advise you, one and all, to visit their magnificent hospitals. Our shops are now ventilated. I can remember the day when a clothier's or a draper's shop used to be foul up to the very entrance door. By Arnott's & Sheringham's valves, Watson's & Muir's two and four point ventilators, Chownes's reversed syphon or Chadwick's archimedean ribbed conductor, shops may now be made as healthy as a well-ventilated office. Our vehicles, however, want attention. First-class carriages, I consider, are very well ventilated; but second-class carriages are not ventilated at all; and it is not very surprising to observe delicate ladies, when travelling in these carriages, sit with their faces to the wind to catch a breath of air. Our cabs are very badly ventilated. Many of them are regularly used by delicate people, and perhaps these very cabs, not an hour before, had conveyed a person in disease to the Infirmary or Fever Hospital, or a dead child to the cemetery!

Liverpool Architectural Society.—At the weekly meeting on the 28th ult., Mr. Joseph Boult presiding, Mr. W. Stubbs, C.E., read a paper entitled "Notes on the Building Sciences." A discussion followed.

ACCIDENTS IN LONDON.

The number of deaths from negligence and accident, as returned by the Registrar-General during last year in the metropolis alone, is of serious amount, and they are thus divided, viz.:—Fractures and contusions, 728; drowning, 392; suffocation, 341; burns and scalds, 340; poison, 58; and some other causes, which make the total deaths in the year 1,888.

It will be seen by the above death-list that there is a large excess of fatal cases to be attributed to fractures and contusions; nor is this much to be wondered at when we look around amongst the immense masses of the metropolitan population at the numerous causes by which these are produced. The multitude of vehicles which are moving at all paces along the crowded streets; the heavy, swift-going railway vans; the express messengers on horseback who ride to and from the various goods stations; the cabs, omnibuses, and other carriages; the hard-riding butchers' boys, the brewers' drays, and the countless number of various conveyances for goods and passengers, are all sources of danger to wayfarers. With care and better management on all parts, — on that of the drivers and others of the community,—much of this mischief might be prevented. Many accidents from carriages happen to children. Little ones scarcely able to walk are allowed to stray into the thoroughfares, and get under the feet of horses and the wheels of carriages. Boys, by riding behind funeral coaches, cabs, and carts, often get run over when they jump or are driven off by other carriages. The number of deaths from this cause alone is considerable. There is also the carelessness of omnibus drivers and conductors, who drive away before passengers are off the steps, or leave elderly people and strangers to the bustle of London in the middle of the streets, where vehicles are rushing in all directions. Some are knocked down at crossings by the starting away of frightened horses. There are other dangers to which the wanderers in the London streets are exposed, such as the ill-fastening of the iron openings to coal-cellars, the decay and other neglect of cellar-flaps, the falling of flower-pots, the want of proper care in cleaning windows, and during the demolition or erection of buildings (more care is, however, used in this direction than formerly), the failing of scaffolding, and the mishaps to men and lads engaged in the various branches of the building trades, in the railway works, amongst the shipping on the river and in the docks. In the time of fogs in frosty weather the mischances are largely increased; and when it is considered that 728 accidents are fractures and contusions, the number which, although serious, have been treated without loss of life in hospitals and elsewhere must be enormous.

The deaths from drowning are considerable, and this might be abated by attention to the canals, a matter to which we have before referred. But where there is such an extensive water traffic there will always be a serious number of fatal accidents from this cause.

The 392 deaths from suffocation are far more easily preventible, for the chief of these arise from the carelessness and too often the drunkenness of mothers, who over-lay their children, or smother them in the bed-clothes or shawls. In the course of our examination of the poorer districts, we have often felt pain and surprise at the apathy with which loss of life from this cause is viewed by those immediately concerned, or by the neighbours. To this unsatisfactory state of things the coroners and medical officers of health have often directed attention, but seemingly without much avail.

Burns and scalds, 340: this number, in connexion with fires at houses, would be increased very largely but for the exertions of the fire brigade, and those who are connected with fire-escapes, which are stationed at so many points of London; and the majority of the deaths from the above cause are to be attributed to want of care. In the houses of many of the industrious and poorer classes deaths result from children being allowed to play in their night-dresses while a lighted candle is on the floor; others by the want of fire-guards, and in consequence of being allowed to play in the front of fireplaces, by the upsetting of pans and kettles, to be in part attributed to bad construction of the stoves for family uses; drinking the scalding contents of tea and coffee pots; falling into pails of hot water, which have been left heedlessly in the way. Most of these fatal accidents might be avoided, and so might the

jority of those which are caused by the wear-
g of crinoline, by the explosion of fireworks,
y lucifer matches, and other matters of this de-
cription. There are a few instances of burning
hich may be attributed to the practice of read-
ng in bed; but this is not so usual as formerly,
nce bed-hangings have become disused, and
etter kinds of lights have been brought into
se.

Throughout England the number of deaths
not suicides), registered by the Registrar-Gene-
al, in 1862, were,—fractures and contusions,
,397; burns and scalds, 2,767; drowning, 2,463;
uffocation, 1,219; hernia, 782; poisoning, 216;
unshot, 111. This, in round numbers, shows
nearly thirteen thousand accidental and careless
leaths.* This of course includes the metropo-
itan accidents.

It is a good work to endeavour in every
way to reduce this long, black list, and to lessen
he number of cripples who are made each year,
of but little use to themselves or to the com-
munity; and, there is little doubt that, with
care in our mines and manufactories, by the
proper inspection of boilers and machinery, and
by attention in the homes of the people, the
number of accidents might be reduced enor-
mously.

SHREWSBURY IN 1864.

THE editor of the *Shrewsbury Chronicle* quotes a recent letter which appeared in our pages under the heading, "A Neglected Town on the Severn," and instead of adding a mere exhibition of *esprit de corps*, condemning the writer and denying any necessity for improvement, as on some similar occurrences we have seen elsewhere, wisely points out to his fellow townsmen some of their shortcomings, and calls on them to ascertain for themselves how far they are liable to the heavy charges made against them by our correspondent, and the true causes which have kept material progress in their town so long in the background. The writer gives what he considers the reason, in concluding his well-timed observations:—

"No measure," says he, "however good its object may be, has a fair chance so long as it is viewed through the jaundice eye of politics or of individual crotchets. These have been from the beginning, and still are, a curse to the town, and the true obstacle to all public improvements and social progress; and so long as its inhabitants are content to indulge in their annual faction fights for municipal honours, so long as they continue to prefer fighting the battles of party politics here—a Whig and Tory in preference to seeing to the material improvement of the town, the reduction of their burdens, and the general health of the borough, so long will progress be at a stand-still, and capital and enterprise wisely keep their distance from Shrewsbury."

We sincerely hope that what has been said may have the effect of rousing the good people of Shrewsbury to necessary improvements, and lead them to make right use of the advantages of their situation.

IRISH ANTIQUITIES.

WE feel much pleasure, says the *Galway Vindicator*, in transferring to our columns to-day an article which appeared in our valuable contemporary, the *Builder*, from the pen of the learned Professor of Geology in the Queen's College, Mr. William King. The writer has thrown some new light upon those interesting remains of a long bygone period, the Round Towers of Ireland, which serves to show that, contrary to the opinion that has generally prevailed of late years, they should be considered to belong to a pre-Christian era. The object for which these edifices were erected, their representative signification, their age, have long been subjects of keen inquiry among archæologists; but since Mr. Petrie's elaborate work on the subject, few authors have ventured to regard them otherwise than as connected with the first establishment of Christianity in our island. Mr. King, however, who is evidently an observant and thoughtful man, takes a different view; and should his discovery, that the doorways and towers of the structures he examined differ from each other in the material of which they are formed and the time of their erection, be found applicable to other such edifices, it may be that we shall have to reverse the decision to which Mr. Petrie's book has almost universally led. Mr. King has extended his researches to other objects also, highly attractive to the antiquarian,—the mound-covered cromlechs met with in the region of the Boyne; and his remarks, we are sure, will be read with the attention they merit. Although our own locality cannot boast of constructions so mysterious, nevertheless it abounds in relics of a high antiquity. The isles of Arran are rich in their stone fortresses, their "pelasgic styled" Christian oratories, their old carved crosses, and have for this cause been named "The Sacred Isles;" while Kilmacduagh is a perfect Palmyra of Pagan and Christian ruins. We have also nearly at our doors a Round Tower at Roscom, whose existence is known to but few, as far as we can learn, but which is deserving the observation of all who wish to become enlightened regarding the nature of those edifices. All these treasures have, we know, long engaged the attention of Professor King, while devoting himself to elucidating the geological structure of this district, and we hope in due time the results of his researches will be given to the public in a form worthy of his reputation.

* The deaths from railway accidents are not included in the above list. By the Board of Trade returns the deaths from railway accidents in 1861 amounted to 35 passengers killed, and 461 injured in the United Kingdom; but of this number 21 deaths were attributed to their own misconduct or want of caution.

THE MANCHESTER ALBERT MEMORIAL.

THIS long-projected memorial is, after much protracted discussion, at last to be proceeded with. Mr. Worthington is the architect. The memorial will be erected by Messrs. Patterson, Oxford-road, whose tender has just been accepted by the executive committee, at the sum of 2,679*l*. This will include the whole of the masonry, the geometrical tracery, and the simple ornamentations. The carving and decorative work, with the *grille* and other ornamental ironwork will be supplementary. The cost will be greater than was originally anticipated, owing to the nature of the foundation. The ground is riddled with drains, foundations for buildings, and culverts; and it becomes necessary to excavate down to the rock, at a depth of 17 ft. below the surface. The cost of the brickwork to the level of the street will be about 600*l*., and of the granite steps at the base about 700*l*. These have already been prepared by Messrs. Patterson, to whom the contract had been let. The site of the memorial will be in the centre of the intended new square, which is to be named after the late Prince Consort. It is to be hoped, says the *Courier*, that this suitable site will also be selected for the contemplated new town-hall. In that case the monument will stand opposite the middle of the façade, and will occupy a central position in the Albert-square. The area of the space occupied by the granite steps will be 25 ft. square. There will be five steps, rising to a height of 5 ft. above the ground-level. The size of the main structure will be about 20 ft. square, and rise to a height of 70 ft. to the summit of the spire. We have already given an engraving of the design.

GENERAL BUILDERS' ASSOCIATION.

THE first annual general meeting of this Association was held at Nock's Hotel, Temple-row, Birmingham, on Tuesday, November the 29th, 1864, and was attended by upwards of 120 persons, including members from Kidderminster, Leicester, Walsall, Burton, Bilston, Wolverhampton, Stourbridge, Derby, Wednesbury, Nottingham, Coventry, Dudley, Bromsgrove, and the Potteries.

The report, which was read by the secretary, concluded thus:—

"Your committee, before resigning their charge into your hands, cannot let this opportunity pass of urging you strictly to adhere to the discharge note, never disclosing in any instance from using it, or enforcing its use; and they feel assured that it cannot fail to meet the end in view, and will ultimately be looked upon by the steady industrious workman as one of the greatest blessings offered by the employer. They would further suggest that no man should be taken into your employ unless he brings either his discharge-note or, in case of his previous employment by a non-member of the Association, a character from his previous employer. By this means you will always secure getting good workmen, and remove the possibility of the unions dictating to the employers whom they shall employ; for, why should the building operative be free from that test as to his ability and honesty that every other operative is subject to? Or, to place it in other words, why should he refuse to give to a builder what he would not hesitate in giving to a manufacturer when he asks for employment? Again urging the above remarks upon your consideration, your committee have great pleasure in resigning their arduous task."

On the motion of Mr. Ife, seconded by Mr. Ratcliffe, it was unanimously resolved "That the report be adopted and printed for circulation."

COMPETITIONS.

City Offices Company.—The first premium has been adjudged to Messrs. Francis, who, it is understood, will carry out the works required for the proposed new offices in Bishopsgate-street and Old Broad-street, and the second premium to Mr. Parsons.

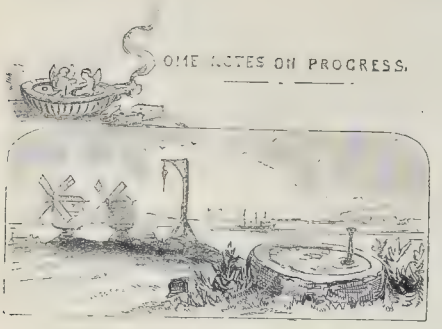
New Welsh Presbyterian Chapel in Prince's Park-road, Liverpool.—A limited competition of about fifteen sets of drawings, furnished entirely by local architects, the plans containing the different authors' ideas of what a place of worship should be, has been exhibited. There was every variety of design, says the local *Journal*, from the dog-kennel style to elaborate Classical and Gothic. For the first prize the plans marked "Ich Dien" were selected. They consist of two sets of designs, by Messrs. W. & G. Audsley, and are both Early Gothic, with a slightly French feeling in the details.

New Church at Fulford (Yorkshire).—For the new parish church which is about to be erected at Fulford, fifty-five sets of designs were sent in by architects residing in various parts of the country. The design which has been selected is one by Messrs. Pritchett & Son, of York and Darlington.

THE CITY MEAT MARKETS COMPETITION.

A CORRESPONDENT writes,—"The designs for the new (London) City meat and poultry markets have been sent in, and it is said that the City architect is to carry out the design. Now this is certainly not quite the thing, because it is not the premium, but the more substantial reward, that established men go in for; and a few remarks in your journal may change the feeling of the corporation, and induce the committee to employ the architect whose design is selected to carry out the work."

THE METROPOLITAN BOARD OF WORKS.



THAMES EMBANKMENT AND MAIN DRAINAGE.

AT last week's meeting, the engineer reported that with respect to the Embankment works, on the first contract, between Waterloo and Westminster bridges, a coffer-dam of nearly 300 ft. in length was nearly completed, and caisson-sinking, filling-in, and such like works had been progressing. The approximate value of the works, material, plant, and machinery on this contract was about 70,000*l*., or 3,000*l*. in excess of last month. This contract, in the engineer's opinion, was not progressing so rapidly as it should; and Mr. Farness, the contractor, had been urged to make greater progress. On the second contract, between Waterloo Bridge and the Temple Gardens, the brick foundations had been finished in the completed portions of the coffer-dam, the three lower courses of Hull granite and five courses of the Dalbeattie had been bedded, thus bringing this portion of the wall up to within about 6 ft. of Trinity high-water mark. Other works were also proceeding favourably on this contract. The total estimated value of the work done, materials, plant, machinery, &c., was about 55,000*l*.

Mr. Samuda gave notice of his intention to ask the solicitor what power the Board had of compelling the contractors to press on with their contracts.

The engineer then went on to report the progress made with the Main Drainage Works. He said that the riveting of the aqueduct over the Metropolitan Railway had now been completed, and when this aqueduct had been lowered in its place, and a few minor connexions made, the whole of the Middle-level sewer would be completed, the approximate cost of which was 316,000*l*. Nearly four miles of the western sewers had been finished, at a cost of 64,500*l*., and nearly one-half of the Low-level sewer had been completed, at a cost of 29,000*l*. Upwards of seven miles of the southern low-level sewers, with various branches, had been constructed, at a cost of 180,000*l*. On Greenwich and Deptford sewers work had been done to the amount of 7,100*l*., and at the Crossness outfall works the approximate value of the work executed was 270,000*l*.

The report, except that part relating to the Embankment, which was referred back, was ordered to be entered on the minutes.

Those who have lived during the last half-century cannot fail to wonder when they think of the changes which in their time have taken place, and how many of the once familiar objects have gone out of use, some of them so gradually that they have scarcely been missed; indeed, it is only when some peculiar circumstances occur, which bring the old things to the memory, that we are enabled to form some estimate of the numerous matters of curiosity, which either have already vanished, or are rapidly vanishing, from the view.

Now the bugle of the royal mail and the stage-coach guard no longer sounds its cheering notes in the thoroughfares of busy towns, cathedral cities, or rural hamlets, waking by the way the echoes of hill and dale. The stage waggon,—that huge unwieldy vehicle, of greater bulk than that of half a dozen full-grown elephants, moving at snail-like pace to and from the metropolis,—is no longer seen; on the main roads the post-chaise is seldom to be met with; and the few post-boys who still linger about the now-deserted inns are old boys indeed, who have fallen into "the sere the yellow leaf."

From the turnpike-roads and their margins many formerly well-known objects have been removed,—amongst them the ghastly gibbet, which here and there marked scenes of robbery and murder: the stocks and whipping-posts, the cages and other temporary prisons, have nearly all disappeared; even the once well-known idiots are no longer allowed to roam abroad, but are gathered up and cared for in unions and asylums. The pedlar and his pack and the wandering "number man" have both nearly lost their vocations,—the one in consequence of the ready means of access which there is to the neighbouring market towns, the other owing to the extensive circulation of good and cheap periodical literature by other agencies.

Windmills—even water-mills—are declining before the power of steam machinery, which is rapidly changing the agricultural implements; so that before long the hand-thrashing flail will be as rarely seen as now are the distaff, the spinning-wheel, or stocking knitting-needles and sheath.

From the middle-class schools there will be missed the truant-clog, the dunce's cap, the leathern taws, the black-hole, and other means of torture and persuasion; also the goose-quill pens; the *pounce*, which was formerly so much used instead of blotting-paper; the round ebony rulers which were required before the machine for ruling writing-paper was invented; the book of the "Heathen Mythology;" and other matters, the absence of which will be as little regretted as those terrible "horsings," and other punishments which were so common in schools at the beginning of the present century, and for some time afterwards.

In the streets of London we no longer see the yoked dogs in the cat's-meat barrows, or the dancing dogs and bears, the camels, dromedaries, and other shows of the wandering Italians; the wooden puppets, and the galantee show. Even famous Mr. Punch is now not often to be met with. The bells of the dustmen, and that of the parish bellman, and the cry of the little chimney-sweeps have been silenced. The aspect of the shops has been completely altered. After dark we no longer see in them dim lights struggling with the darkness; and both in these places and throughout the many miles of streets, brilliant gas has been the means of snuffing out the oil-lamps, which served but little other purpose than that of rendering the darkness visible. The strong power of the law has prevented the exhibition of monster cars and other moving advertisements; and, by the same means, the matrimonial minstrelsy of the marrow-bones and cleavers, and the "rough music" which was commonly performed on certain joyous occasions, have been nearly brought to an end.

In the last half-century, the variety of costume which has been seen in the streets of the metropolis is curious. Amongst the details were pig-tails; hair-powder; wigs of various shapes; high-crowned, low-crowned, broad-brimmed, and narrow-brimmed hats; Hessian boots; shoes with shoe-buckles; scanty skirts, short waists, and large coal-scuttle bonnets of the fair sex: these and other toggery too numerous in the present space to mention, have gone out of use. It may, however, be noticed, that at the beginning of the present century, hair-powder, pig-tails, cocked-hats, dress swords, &c., were worn by several artists, engravers, and gentlemen of other professions: now, hair-powder is used only by servants; and it is worth while to note how long fashion lingers in this way, and how much now the footmen behind the carriages in St. James's-street, on a drawing-room or levee-day, resemble in their dresses the fine gentlemen of fifty or sixty years ago.

From most of the snuff and tobacco shops the effigies of the friendly Highlander, carved of goodly size, and coloured to the life, proffering his gratuitous pinch, has been removed; so have the men of Africa and the party-coloured rolls which were supposed to represent packages of the fragrant weed; and the signs and emblems of particular trades have fallen much into disuse. Even the signs of public houses and taverns are now seldom delineated by either pictorial or sculptured art; but "The rising Sun," "The Fox under the Hill," the red, white, and black Lions, "The Goat and Compasses," are merely described by means of letters.

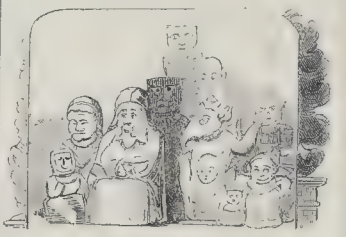
The changes in the manner of conveyance in London are very distinct; but on this point we will only remark that the writer has been informed on good authority that including both the north and south side of the Thames there was last year only one licence taken out for a hackney-coach,—that is, one of the lumbering carriages on four wheels drawn by two horses, which were once to be met with in such large numbers: whither the remainder of those public carriages and their ancient weather-beaten drivers have gone it is not easy to say.

Inside the houses, during the time mentioned, many objects once familiar have either vanished from the view altogether or are now seldom to be seen; and some of them are kept rather for ornament or curiosity than for use: amongst these the heavy unwholesome hangings of the best beds, and the warming-pans; the predecessor of the lucifers,—the flint-and-steel tinder-box; black leathern "jacks;" horn drinking-cups; pewter and wooden platters and spoons; cradles with rockers; very common prints of Scripture subjects, nailed to the walls and margined with dark-coloured list; the semi-transparent pictures of Lord Nelson's funeral; rude plaster casts of the Virgin Mary; the gaudily-coloured and ill-shaped parrot; the cock that "crowed in the morn," have now become rare; and it is more than twenty-five years since the writer of these notes saw in a remote part of England the turnspit-dog made to work in the wheel. This brings to mind that several kinds of dogs which used to be common in and about houses have become very scarce; for instance, the pug-dog, the representative of which will live for ages yet to come in Hogarth's portrait of himself; and that formidable animal the truly-bred English bulldog. In connexion with the interiors of houses there is one thing the disuse of which is to be regretted; that is, the cleanly and neat application of stencilling, which is pleasant to the eye and also prevents the assemblage of troublesome insects to the same extent as with wall-paper.

From amongst the once well-known London exhibitions we miss the wild beasts at Exeter Change, and those of the Tower Menagerie; Miss Linwood's needle-work, Mrs. Salmon's wax-work, the Lowther Arcade, Polytechnic exhibition, and fifty others of greater or less celebrity, including now the Colosseum in the Regent's Park. During the last twenty-five or thirty years the present writer has seen the end of several celebrated metropolitan institutions. He has, for instance, heard the last notes of the bell which, after use during several centuries, closed Old Smithfield Cattle-market;—seen the civic procession which "eyed" for the last time the very ancient fair of St. Bartholomew's;—heard "All out" called for the last time in the old Reading-room of the British Museum;—seen the last interments in the Old St. Pancras and other metropolitan grave-yards; and other events which, although they now belong to the past, will throughout lifetime linger in the memory.

Except for the crime of murder, England is now no longer degraded by public executions; and although chains and shackles are represented on the outside of some of the prisons, they are but seldom used inside.

On the Thames, the changes during the past half-century are not less marked. Old London Bridge, Blackfriars Bridge, and Westminster Bridge, have given place to other structures. The crowds of watermen are no longer seen at well-known points; the *Maria Wood* is in jeopardy; and the barges of the City companies which used to make such a goodly show, have either been disposed of or are in boat-houses, gradually falling into decay.



Let us glance at another part of the subject. While admitting to the fullest extent the exquisite and indescribable beauties of much ancient art as we find it illustrated in examples of architecture, sculpture, painting, and articles for domestic and other uses which have been left to us, it seems that in many instances there is an affected admiration of things which have no claim to it in an artistic point of view, and are only praised because they are old. The action of time, by rendering scarce once familiar objects, and by giving a picturesque indistinctness and peculiar colouring to matters not of themselves beautiful, produces a pleasing effect upon the imagination.

To some persons, everything old is worthy of praise: ugly mugs, and objects which are absolutely unpleasant to the sight, are affectedly regarded as objects of delight. The proper consideration of this subject is of consequence, and it may be worth while one day to direct attention to some of the points which are connected with it.

When looking from our present point of view at the works of modern sculptors, it is necessary to compare them with the remains of the ancient and Mediæval times. How, for instance, do the carvings of the Houses of Parliament bear comparison with those around the shrine of Henry V. in Westminster Abbey? or how will our modern statues bear contrast with those of the ancient personages which are placed so closely in connexion with them? Will the halo of antiquity give something of the same charm to the monuments of Watt, Wilberforce, Mansfield, Peel, and others, which is noticeable in the effigies of kings and queens of days long since gone by? Probably not.

This subject has many aspects, but we must here be content to put the following queries:—Has the hand-skill of masons, carpenters, and bricklayers declined? Is our glass for building purposes of a better or worse quality than formerly? Is it no advantage in these days to have geometrical skill applied to carpentry, and iron in combination with other building materials? and how will the new city streets bear comparison in after-years with those which have passed away?

What has been said may be a hint to lead others to pursue this line of reflection.

Ancient Gods.

NEW OFFICES, CHANCERY LANE. [Mr. A. W. Blomfield, Architect.] MESSRS. HEATON, BUTLER, & BAYNE'S PREMISES, KING STREET, COVENT GARDEN.

LONDON STREET ARCHITECTURE.

Messrs. Heaton, Butler, & Bayne's Premises, King-street, Covent Garden. — The ground on which these premises are built is part of the estate acquired by the Metropolitan Board of Works, to form the new street in continuation of Cranbourne-street to Covent Garden. Prior to this alteration, the then existing houses, or hovels, were inhabited by persons of the lowest possible description. Now a good street of first-class houses has been substituted, the Garrick Club-house forming the centre and most considerable building. Opposite to this, and on a most irregular and apparently inconveniently-shaped ground, are the premises of which we engrave a view, built from the design of Mr. Arthur W. Blomfield, for Messrs. Heaton, Butler, & Bayne's stained glass works. Mr. Howard, of Chandos-street, Covent Garden, was the builder.

There are in all fourteen rooms, one of them including the height of two stories, and used for a show-room, with a yard and back entrance in Long-acre. The kilns are built in the front basement. The front is of brick, with varicoloured arches and bands, and some few stone dressings.

We elsewhere mention a good Trade Book recently published by the firm for whom this manufactory has been erected.

Offices, 87, Chancery-lane. — The building shown at the side of the last-described has lately been erected, for Mr. W. G. Romaine, C.B., secretary to the Admiralty, by Messrs. Brown & Robinson, from the designs of the last-named architect, Mr. Blomfield. The face is of brick, with red bands, and Bath stone for heads and sills of windows, and caps and bases of columns. The columns in the windows are of green Galway marble. The carving is by Mr. Earp.

It is intended to be let as chambers, of which there are two sets on each floor. The plan presented considerable difficulty, the frontage to the street being only 14 ft., while the depth is 82 ft.

PROPOSED GREAT IRON GIRDER BRIDGE.

A great railway undertaking, resembling in character the Britannia, Saltash, and Victoria bridges, and surpassing even these in point of dimensions, is to be submitted for the sanction of Parliament in the ensuing Session. The North British and Edinburgh and Glasgow Railway Companies have given notice of a Bill empowering them to construct a great iron girder bridge across the Firth of Forth from near Blackness Castle, three miles above Queensferry, on the West Lothian coast, to Charleston, in Fifeshire. The plans of the bridge have been prepared by Mr. Thomas Bouch, C.E. The length of the proposed bridge is 3,887 yards, or two miles 367 yards. It will be about seventeen miles from Edinburgh and thirty-four from Glasgow, and is intended to accommodate an express route from these cities to the north of Scotland, in connexion especially with what is known as the "east coast" route. Instead of a single span of 600 ft., with two side spans of 300 ft., which was the scheme of last year, it is proposed to make four spans of 500 ft. each over the navigable channel, the spans diminishing to 200 ft. and 100 ft. on either side. The clear height of the bridge in the channel will be 125 ft. at high-water of spring tides, thus giving ample height beneath for the tallest vessels frequenting the ports of Grangemouth and Alloa. The frame of the girders over the widest spans will be about 70 ft. giving a total visible elevation of 195 ft. for the distance of nearly half a mile, the height diminishing at the ends of the bridge as the spans become reduced in width. Taking the submerged part of the work, the height will be 25 ft. of foundation below the silt bottom, 50 ft. of depth of water at ebb spring tides, and 18 ft. of fluctuation of tides, making in all 285 ft. in height of work to be executed. The middle piers will be of stone to the height of 10 ft. above high water at spring tides, and the rest of the structure will be of malleable iron. The bridge will be built for a single line of rails, with a gradient in the south end of 1 in 134, and in the north end of 1 in 100, so as to give the necessary elevation in the middle. The dimensions of the Britannia Bridge may be stated by way of contrast:—Span, 460 ft.; height, 104 ft.; depth of tube, 30 ft. The cost of the bridge is estimated at between 500,000*l.* and 600,000*l.*, but, on the other hand, the companies would save the capital cost of piers, breakwaters, and steamboats, and cost of working the ferries. In connexion with the Tay Bridge an unbroken express line would be provided between Edinburgh and Dundee, saving the inconvenience, uncertainty, and delay of the Burntisland and Tayport ferries.

THE CONSTITUTION OF COMMITTEES ON ART MATTERS.

A correspondent whose opinion is entitled to consideration writes as follows on this subject:—I would say a few words as to the constitution of committees which deal with art subjects. According to my professional experience, nothing can be worse than the conduct of committees to artists in many instances. In architectural matters it often amounts to perfect swindling. In sculpture it is perfectly scandalous how private predilections operate to the *public* disadvantage. There is, generally speaking, less judgment in sculpture on the part of the laity than in any other branch of fine art. Hence the monstrous statues which are so often erected to public men. Those self-created *soi-disant* judges who so often manage these public commissions, frequently give the order to men who never made more than a bust. They seem to think that, if a man can model a bust, he can make a monumental statue! And thus monuments are erected which are perfect eyesores to every man of taste, and which prevent the uneducated from ever improving; on the contrary, convey false impressions altogether of the true nature of art.

It occurred to Mr. Wilson, with reference to the Glasgow windows, that this really monstrous state of things might be amended by a different constitution of committees, and he proposed that the window committee *should report* to the subscribers, and should print and publish its report. The subscribers could then decide as an entire body, and could, if it approved, reappoint the committee. The committee acted on that principle. They inquired, reported, and presented themselves to the subscribers, who reappointed them, with *defined* duties.

Observe, this cut away the ground of all private jobbing or patronage, had there been a thought of such a thing; besides, the protection to the committee was immense. If pressed from without, they pointed to the nature of their constitution. If Government accidentally misled, or a solitary recalcitrant subscriber involved the committee in an apparent difficulty, they pointed to the agreement, and so steered the ship in safety.

I think that if every committee instructed with the erection of a public monument were at first appointed to *report only*, we should see much less of the perverse jobbing now so universal.

The *Builder*, and other journals devoted to art, have long been pointing at these perversions of duty; but I venture to think that the plan which was adopted in Glasgow with the very object of preventing jobbing has been successful. Any one acquainted with committees knows how one loud obstinate man can drive the others into an erroneous path; how rarely men are found to make a firm stand in favour of principle. Art committees, above all others, are subject to the tyranny of a member of strong will, because so many Englishmen yield a ready obedience to pretenders to judgment in art which only a few profess to understand. A committee on any subject familiar to men of business is likely to act fairly: each member knows his subject, and has a will and a judgment; it is not so in art, and the system generally fails when it is a question of art. The interests of art are constantly sacrificed in this way. In most towns there are some busy-bodies who make small reputations, and *even capital*, of perpetual interference in matters of art; they are rarely practical patrons by buying. Their expenditure consists in talking about art, till they are put on all art committees; and the patronage of local art passes into the hands of the worst judges in reality in the community,—for no worse judges exist than these *soi-disant* judges. They have no catholic feeling, but are narrow, bigoted, and sectarians in art matters. There is nothing to cure this but publicity, and that such committees shall give evidence of real work, real thought, real inquiry, real knowledge. A report implies all this; if it does not exhibit this the committee is found out; hole-and-corner work is put an end to, or made very difficult.

SCHOOLS OF ART.

The Carlisle School.—The annual meeting of this school has recently been held, under the presidency of the mayor. The report stated that the school was conducted entirely to the committee's satisfaction by the master, Mr. Lees. The number of students was steadily increasing, especially in winter, and the receipts of the past financial year showed an increase over those of the last few years. In the examination of the works of students of all the schools throughout the kingdom, this school had been eminently successful, taking twelve local medals, one national medallion, which is only awarded to the best works of each division, and two honourable mentions in the national medallion competition. Mr. Potter, M.P., who was present, made the following remarks in the course of his address:—The whole sum subscribed by the manufacturers to the different schools throughout the country in 1862, he said, did not reach 1,000*l.* a year; and he was afraid that in the centres of manufactures, in proportion to their size, the schools had succeeded worse than anywhere else. It was admitted that it was no part of the duty of Government to assist the manufacturers. His own idea was, the Government had no right to assist any class—except those who had not the means to find education for themselves. It might be desirable, however, in some classes of schools which could not be self-supporting. He believed that thoroughly good drawing-schools could not be self-supporting without Government aid. The training school at South Kensington had supplied first-class masters to upwards of ninety schools. That was a great step gained. At the same time, he thought the schools were entitled to more than the 20,000*l.* a year they had been getting. That sum included what was given to South Kensington, so that he did not think the country schools received more than 15,000*l.* or 16,000*l.* a year. The teaching was very good, and they had got to that point when the schools might be established upon a sound basis, and be amazingly valuable.

The Bristol School.—The annual meeting of the supporters of this school has also been held, Mr. P. W. S. Miles presiding. The attendance was large. One of the hon. secretaries read the report, which document stated that the experience of the past year had fully justified the favourable report presented at the last anniversary. There had been under tuition in art 1,370 children in public schools, and 95 students in private schools. These children and pupils won a total of 88 prizes and 132 certificates. To the students in the central school were awarded 11 prizes and 36 certificates, making a total on the outside and central schools of 99 prizes and 168 certificates. To these must be added six distinctions under the head of honourable mention, one national medallion, and 15 local medals—nine of the works which gained these medals being deemed worthy of selection for national competition. The finances of the school, which for some years had to struggle against difficulties, had at length assumed a more sound position. Subscriptions were annually received for the payment of interest on and towards the liquidation of the existing debt; and the current expenses of the school, it was hoped, would in future be covered by the income. It was a chief object of the revised regulations (continued the report) to extend more widely among the industrial populations of this country a knowledge of practical art. Accordingly, your committee have sought to bring under tuition a greater number of public and parochial schools, and they are now happy to report that these affiliated schools, which had once fallen to three, are now augmented to ten.

The Kidderminster School.—The third annual examination of this flourishing institution has just taken place, under the direction of Mr. E. Crow, and the results show a very great improvement over those of last year. Not only are those of the examination of the students at the central school satisfactory, but the branch schools are prospering, and the pupils have gained a much greater number of prizes and certificates than at any previous examination. The results are most creditable to Mr. Kennedy, the head master, and his assistant, Mr. Perks. The central school has carried off two national medallions, 13 local medals, and obtained one honourable mention. Last year it obtained 1, 11, and 2 respectively. The students have also gained 10 prizes and 20 certificates in the second grades of freehand, geometry, model and perspective drawing, as against 9 and 12 in 1863. The prizes are

boxes of colours, crayons, sepia, &c. The public schools have also distinguished themselves. The total number of medals, prizes, certificates, honourable mentions, &c., last year, was 108; and in 1862 it was 66. This year it is 210, showing an increase over 1863 of 102, and over 1862 of 144. The number of pupils in 1862 was 520, in 1863 it was 508, but this year it has increased to over 1,000.

The Taunton School. — The annual meeting of the friends and supporters of this School has been held in the Hall of the Institution, under the presidency of Mr. A. Mills, M.P. The report says,—"It is very gratifying to the committee to be able to report that from its establishment in 1855 to the present time the Taunton School of Art has continued in a most satisfactory manner to fulfil the objects for which it was instituted. Two national medallions and thirteen local medals were distributed, together with a great number of prizes and rewards; there were besides two honourable mentions in the national competition and three in the local." The report, after alluding gratefully to the exertions of the art-master, Mr. Gunn, says,—"The committee could not but look with some anxiety to the operation of the recent minute of Council, and to its effect upon the income of the art-teacher. They are happy, however, to be able to report that the result of the examination last spring has not diminished the allowance previously made by the Department in consideration of the certificates obtained by Mr. Gunn. The number of the pupils taught in the School of Art during the year 1864 has been 117, being 17 in excess of those in the school the year preceding, and it is gratifying to find that the accessions have been from the artisan class, to whom the knowledge of drawing is so important. In addition to these, about 55 pupils from private schools are likewise taught here. The number of the children of the industrial and working classes in Taunton and Wellington, who are now instructed in drawing by the assistant-master, Mr. Tucker, in connexion with the School of Art, has reached the very high number of 1,060."

WORKING CLASSES' INDUSTRIAL EXHIBITIONS.

What is the intended use of Industrial Classes' Exhibitions? In theory, I believe, to stimulate to proficiency and perseverance the working classes, and encourage them to spend their time usefully. In practice, they will encourage, I fear, a feigned simplicity or ignorance, which will be more petted and noticed than genuine work.

A butcher who would send, say, a wretched attempt at a water-colour drawing, and state that it was done with one of his skewers instead of a brush, would stand a much better chance of having it noticed than would a professional painter if he sent a first-class drawing, done in the ordinary way.

Just so with wood-carving, of which I want to speak more particularly, and of which, at the late North London Exhibition, there was a little of the best, and a great deal of the very worst, I have ever had the pleasure or pain of seeing.

I was awarded a second prize for a piece of carving which three years ago gained a first prize at a competition of wood-carvings alone, and was engraved in the *Art-Journal*; while some of the most wretched attempts by amateurs were sent to the first rank. These latter are all invariably done with a knife (also exhibited); and I believe, if I had gone a step farther, and said mine was done with a knife *and fork* (and exhibited the knife and fork), I should have got not a second or first, but an extra prize.

The experience I have learnt by the late North London Exhibition is, that professed workmen stand no chance in such exhibitions against amateurs; and, unless some alteration be made in the way of awarding prizes (so that a professed workman receive more honour for superior work and design, than an amateur for ridiculous work, but showing perseverance and industry only), I am sure the intention of this class of exhibition will be frustrated, and professed art-workmen will be unrepresented at them. R.

*** "R." will see that at the time he was writing his letter we were expressing an opinion similar to his own (p. 887). Whether his work, however, three years old, and already rewarded elsewhere, should have received a prize at all, is another question.

ARCHITECTURAL PHOTOGRAPHIC ASSOCIATION.

The committee have prepared for the current year twenty-one mounted photographs of French churches and cathedrals, from which subscribers of one guinea are entitled to select any ten, and subscribers of two guineas any twenty subjects. They may have extra plates for 2s. 6d. each. The subjects include several views of Amiens Cathedral, interior and exterior; Church at Andelys, and Ancient Half-timbered House; the Churches of Agincourt, south-west view of Church; Belloy (Renaissance), two views; Cires les Mello, two views; Luzarches (Renaissance), Mogneville, Montataire, Morienval, Nogent les Vierges, Tracy le Val, Vertheuil; Noyon, Cathedral Cloisters; and View of the Chateau Pierre-fonds.

Several of the churches, mostly of simple type, the towers with saddleback roofs, are charmingly picturesque; as, for example, that of Tracey le Val. As photographs, the best amongst the subjects we have seen are the view of the Cloisters at Noyon, the Chatean Pierre-fonds, and the Sculpture in the South Transept of Amiens Cathedral.

Subscriptions, for which the photographs form a very good return, may be paid to Mr. Lightly, the honorary secretary.

THE ARCHITECTURAL MUSEUM PRIZES.

In reply to the offered premiums of 20*l.*, 10*l.*, and 1*l.* 1s, for the first, second, and third best carving in wood, illustrative of the Good Samaritan, only five works have been submitted, in the majority of which the figures are very unsatisfactory; the foliage and architectural accessories, where introduced, are much better. One of the specimens, marked with a sketch of a Mediæval door-handle, is a work of very great merit, and is so far superior to the others, that the committee will probably have no difficulty as to the award of the chief prize.

For the prizes 10*l.*, 5*l.* 5s., and 1*l.* 1s. for the best reproductions in silver of a group of leaves, there are six competitors; and for the prizes offered by the Ecclesiological Society for Enamels there are five.

REPRODUCTION OF EXAMPLES OF ARCHITECTURAL DECORATION.

The following minute, passed at South Kensington on the 1st day of December, 1864, by the Right Hon. the Lords of Her Majesty's most Hon. Privy Council on Education, speaks for itself:—

"I. My Lords take into consideration what additional examples of architectural decoration, as well of British as of foreign origin, it is desirable should be obtained to complete the collections in the South Kensington Museum, and with this view they desire to have the advantage of the advice and suggestions of the Institute of British Architects, the Architectural Museum, and the architectural profession generally.

II. The objects of decorative art especially referred to are:—

a. Ornamental sculpture in marble, stone, or wood.
b. Wall decorations, in painting, mosaic, &c.
c. Hammered and chased metalwork.
d. Ornamental pavements in mosaic, encaustic tiles, &c.
e. Examples of stained glass.

III. It is desirable that the objects should be the finest specimens of their class, complete in themselves, and not too large for exhibition; and by way of illustration, it may be stated that casts have been obtained of Archbishop Grey's Tomb from York Cathedral, the Priors' gateway in the Cloister of Norwich Cathedral, the Singing Gallery in Exeter Cathedral, the Pulpit of Giovanni Pisano from Florence, the Ghiberti bronze gates from the Baptistery at Pisa, and the like.

IV. The finest typical works in stained glass and mosaics might possibly be reproduced in materials like the original; and the same observation applies to hammered iron-work. Other reproductions may be obtained by means of casting, electrotyping, or large copies by painting or otherwise.

V. In respect to objects of Northern Mediæval and Renaissance Art, in which the varieties of style are very numerous, it would be desirable to form in the first instance a list of a few of the finest examples which illustrate each epoch of the Art and each class of Art. Art in the formation of such a list, the experience of the different Architectural Societies and Architects would be of the highest utility.

VI. Besides making a collection of such reproductions as proposed, to be established in the Museum, My Lords will cause to be compiled general Art Inventories, briefly naming the most remarkable objects which are known to exist, and showing the locality and site where they may be seen and studied. Photographs may be added occasionally to illustrate these inventories.

VII. These Inventories will be kept in type to admit of revisions and additions, and only a few copies be printed from time to time. Copies will be sent to the Architectural Societies; and to any Architects who may apply, and be willing to contribute notices in aid of their completion."

ROYAL INSTITUTE OF THE ARCHITECTS OF IRELAND.

A general meeting of the Institute was held on Thursday week. The hon. secretary read the report of the Council for the session 1863-4, which stated that the members of the Institute had been increased by the admission of five Fellows, twelve Students, and eleven Associates during the session. The Institute had to regret the death of Mr. Patrick Byrne, R.H.A., who was one of its vice-presidents, and of Mr. Edward M'Allister, who had been recently elected a Fellow of the Institute.

The following are the Council and officers for the ensuing year:—

President—Mr. Charles Lanyon, R.H.A. Vice-Presidents—Mr. J. Owen, Mr. G. Wilkinson, Sir John Benson. Council—Sir T. Deane, R.H.A.; Messrs. F. V. Clarendon, G. C. Ashlin, S. Symes, J. J. M'Carthy, R.H.A.; J. Rawson Carroll, W. F. Caldbeck, E. M. Carson, W. H. Lynn, Parke Neville. Honorary Secretary—Mr. James H. Owen. Assistant Honorary Secretary—Mr. J. J. Lyons. Treasurer—Mr. W. G. Murray, R.H.A. Auditors—Mr. N. Montgomery and Mr. J. M'Curdy.

ARCHÆOLOGICAL INSTITUTE.

An ordinary meeting of the members of the Archæological Institute was held on the 29th ult., in their rooms in Burlington-gardens,—Sir John Boileau in the chair.

Mr. Purnell read a paper, by Mr. C. W. King, "On Ancient Gem Engraving," in which he undertook to show that the art of engraving on gems was not practised in Europe during the Gothic period, from the time of Charlemagne until five hundred years afterwards.

Mr. O. Morgan, M.P., exhibited a very curious example of engraving on hard stone, the property of Mr. Bosanquet, from Babylon. Also a cameo, on which was a figure of St. George, of Cappadocia. A brief discussion arose, in which Professor Westmacott and the Rev. Dr. Rock took part, on the question whether our St. George and St. George of Cappadocia were identical, or were different personages.

Professor Westmacott then read a paper on the statues recently added to the British Museum, in which he directed attention almost exclusively to the nude figure of a boy, who is represented to be standing, resting his weight on one leg, and to be tying a fillet round his head. This statue, Professor Westmacott considered there was sufficient inherent evidence to show, was sculptured about five hundred years before the Christian era, and that it is an excellent copy of the celebrated Diodumenus, by Polyclitus, if not the original.

THE ENGINEERS OF THE VICTORIA BRIDGE.

Sir,—Within the past few weeks the engineering world has had its breath taken away by the again repeated eulogies on the name of Stephenson. This name seems to cover and extinguish all the major and minor talents of this engineering era. Many of the eulogies are, we all well know, fully deserved; but have there not been other men, also engineers, who have laboured skilfully and powerfully, and produced vast results? How little the outside world knows of those many meek-minded workers who are absorbed in the making up of a hero! and how the world and the biographer like to centralise their *éclat* in one person!

In your last number you very justly say, in speaking of the Victoria Bridge:—"We do not think that quite sufficient justice has been done in this narrative [life of R. Stephenson], to Mr. Ross, who had so large a share in the undertaking from its beginning to its practical achievement." Also, "credit is due to Mr. Ross and Mr. Hodges, the contractors' engineers." Now, it is well known to all those employed about the works of the Grand Trunk Railway, and also to many outsiders, that Alex. M. Ross, and *he alone*, did design and carry out the Victoria Bridge, at Montreal. This is no mystery to the initiated. Mr. Stephenson did not see the plans, and had not to do with the work until all details were matured. The first plans prepared by Mr. Ross, unaided, are those substantially of the bridge itself. Mr. Stephenson only saw the site of the bridge once; never saw the works at all; was only called in to *float* the undertaking as a Stock

Exchange expedient; was not the engineer of the Grand Trunk Railway proper (this post being alone held by Mr. Ross); did not design, or even conceive the cut-waters or ice-breakers to piers, which are the great peculiarities of the bridge; and did not in any way influence the general design of the bridge. True, the iron-work of the structure was inspected by some of Mr. Stephenson's assistants — before leaving England (Mr. Ross being in Canada). This is about all that was done on his behalf after the inspection of the site of the bridge. The conception of the tube of course had its parent in the Britannia Bridge, but the special application of the same and its multifarious belongings, were purely the results of Mr. Ross's thought. Mr. Ross was not the engineer to the contractors, but to the railway and Grand Trunk Company, and he was a man of independent action and thought. How beautifully and absorbingly, too, does the biographer take into the great man's reputation the idea of Mr. Hodges, the contractor's engineer, in making the felt joints to the masonry in the winter months, and afterwards in the spring grouting up same solid. These and many other matters fall in so glibly to a great man's reputation, to the expense of others. Poor Mr. Ross has done his work, and his large powerful brain and original thought are no more for this world, but his reputation still lives in enduring works. Who that ever knew his peculiar modes of construction, and saw the Victoria Bridge in its finished state, noting its characteristics—the batter of the piers, the broad chisel draft to the masonry quoins, the proportion of the piers, the arrangement of the masonry, the quaint shaved appearance to the cap stones, the length of the abutment being the same as adjoining opening of the viaduct, the Egyptianised character of the masonry, and many other peculiarities,—but would say that the work comes from him and none other.

I do not wish to decry the name of Stephenson; we all owe it much; but then the world is large enough for all comers. Let not reputations and talents be immolated by sensational biographers, or treated with *polar* coldness, to gild one man's shrine, although that man may have been a giant! "Honour where honour is due," and pray let some of the pigmies have a line.

One of the Grand Trunk Explorers.

GLASS ENAMEL.

I have read in your valuable journal a treatise on a very important subject, viz., glass mosaic, which your correspondent, Mr. Lyon, recommended to be adopted in England for architectural decorations, and which he advises for exterior use on account of its being non-porous. Certainly every kind of decoration hitherto attempted has been spoiled by the smoke, which abounds more in England than in any part of the world; therefore Mr. Lyon advises the glass mosaic on account of its surface being smooth, so that it is impossible for the smoke to penetrate, and is easily cleaned by the rain.

This question being of very much importance in England, I would like to be allowed to make a few observations of my own in the matter; and, although they are opposed to your correspondent, I hope he will not be offended. Firstly, I must say that the enamel is preferable to the glass mosaic,—for this reason, that enamel is stronger and more durable than glass; and we have the proof in the ancients who, on this account, preferred the enamel.

Secondly, the mosaic being the reproduction of the picture, the enamel is more suitable for such scope, because the glass is transparent, and the enamel purposely opaque. Imagine to have a figure to reproduce in mosaic: adopting the glass mosaic, the figure and robes would be transparent, which is not natural; at the same time, by using the enamel, you are enabled to reproduce the figure perfectly in every tone and shade of colour necessary to represent nature.

Your correspondent also, in order to make the mosaic as cheap as possible, and so bring it within the means of all classes of society, proposes to work it in large pieces of about 2 square inches; and he says that in such a manner he can reproduce figures and ornamentations.

I have treated the art of mosaic for many years, and have executed commissions in Venice, Egypt, and England: so I hope that my observations on the subject in question will not be despised, — that we shall never have a good decoration if we work the mosaic in such large proportions; and, to prove my assertion, I shall take the above argument, "That the mosaic is the representative of the picture." Then, in a picture, we never find so large a continuation of a colour as 2 in., and especially in the natural figure where the variations of shade are so many and imperceptible as to be scarcely discernible to the naked eye. In this case, in order to have a good mosaic, the pieces of enamel must follow the law of the picture; if not, we shall have a face without either expression or likeness, and a dress without folds or shades. Perhaps the large pieces can be used in some kinds of ornaments of geometrical drawing; but in this case, also, there must be exceptions to break the monotony of colour.

Of course it is well to try to bring this system of decoration within the reach of all classes, but in order to have it cheap, I should never advise to spoil its beauty and nature.

Gillio Salviati.

THE LAWS OF PROPORTION.

MEASUREMENTS WANTED.

May I venture to refer to a sentence in Professor Donaldson's address, reported in the *Builder* of the 12th ultimo? Speaking of the elucidation of the rules and laws of proportion in architecture, he says;—

"Mediæval art has not as yet been so investigated, and some say it never can be . . . . . Who has yet had the patience or grasp of mind philosophically to dive into the mysterious relations and parts which constitute the beautiful in the choir of Lincoln, in the nave of Westminster Abbey, in the façade of Cologne, or in the massive energy of Durham? Whence the source of the impressions which these remarkable structures produce?"

The question is, indeed, "Who is to do it?" Architects have no leisure; amateurs cannot obtain sufficiently accurate measurements. I am sure that there are many of the latter who would willingly and earnestly labour in this cause if there were any means by which they could be furnished with *accurate and systematic measurements*. These could be, and doubtless are, made by architects during repairs and restorations; but to the public they are a sealed book. How gladly would a few of these be welcomed by

A Humble Amateur.

MR. SEWELL ON STEAM BOILER EXPLOSIONS.

Sir,—In one of your late impressions, a correspondent claims the new theory of boiler explosions for Mr. W. Sewell. I should be very glad to be exactly referred to the work in which Mr. Sewell first put forward this theory.

S. K.

INAUGURATION OF SIR G. C. LEWIS'S MEMORIAL AT NEW RADNOR.

The Radnorshire memorial of the late Sir George Cornewall Lewis, bart., has been inaugurated at New Radnor. The design was selected in competition from among sixty sent in. It was the original intention of the committee to erect the memorial on the top of the Castle-hill, at Radnor, which is about 100 ft. above the common level of the town. But on opening the ground, walls of great thickness at right angles with one another were found in all directions; and after the removal of much *débris*, which had been tumbled into what once were dungeons, and vaults, and courtyards, it was found necessary to abandon this spot, on account of the insecure state of the earth, even at a depth of from 10 ft. to 14 ft. from the surface. The expenses of examining the ground, however, as observed by the *Hereford Journal*, in describing the discovery, were more than compensated for by the discovery of several ancient stone doorways and windows in an almost perfect state of preservation, some of which contained the ancient iron stancheons and gratings. Some of these reliques of the masonry of the old castle possessed good mouldings of an early date, with other good architectural features. It is to be hoped that the whole of the remains of the old castle will be exposed, and a careful examination made by some learned archæologist.

The site on which the memorial now stands was then selected. The locality is that part of Radnor where the road from Kington separates right and left into the town.

The memorial, of which we have already given a view and description, is formed chiefly of Box stone, with red Mansfield stone columns. It is 77 ft. high, by 25 ft. at the base. The plan is octagonal throughout; and the arches, gables, cornices, and various parts are carved in a semi-conventional style of ornament. In the sub-base is a band of encaustic tiles. In one of the four gables near to these tiles is a medallion of the late baronet, by Mr. R. Boulton, sculptor, Worcester.

On the chief stage of the memorial are four large statues of Justice, Truth, Literature, and Oratory. These statues are from the chisel of Mr. W. Forsyth, of Worcester.

The contractor for the work was Mr. W. Mansfield, of Kington. The architect was Mr. John Gibbs, of Oxford. The total cost of the memorial was 1,000*l.*, exclusive of the architect's charges and other expenses.

JAVA.

It is asserted that a photographer, who has been employed by the Dutch Government to take views of the most beautiful points on the island, has discovered an entire city buried beneath the lava of a volcano close by, which has been extinct for several centuries. If this be true, and our account says that excavations have already been ordered, what a rich treasure of interesting remains may we not expect from this Pompeii of the Pacific!

CALNE CHURCH, WILTS.

The fine parish church of Calne has just been re-opened, after undergoing most extensive restorations under the superintendence of Mr. Slater, of London.

Previously to the present works being undertaken, the church, though very large, did not afford at all good accommodation for the worshippers. The aisles, transepts, and chancel aisles were blocked up with unsightly and inconvenient galleries: a sloping floor extended from the second detached column of each arcade; and, commencing at the paving level at the point indicated, at the west wall, as high as the caps of the columns; over this raised stage was a large gallery, and yet again over that another for the organ. The west window was thus entirely shut out from the church, and the west door rendered useless.

The church consisted previously to the restorations of a nave of five bays, with aisles on each side. Eastward of the nave was the area originally occupied by the ancient tower, which fell down in the seventeenth century. This space has since been taken into the nave and roofed like it. There were also north and south transepts, for the most part modern. The eastern part of the church consisted of a spacious chancel, with large aisles or chantries on either side. There were also north and south porches, the former being elaborately vaulted.

Opening from the north porch is an old aisle or chapel, lying outside the original north aisle of the church, and communicating with it by an archway. This additional aisle is still known as the "Cross Market;" but was, prior to the recent restorations, used as a vestry.

The tower, as before mentioned, *originally* stood at the intersection of the nave and transepts; but when this fell down in the time of Charles I., carrying with it much of the adjoining work, it was apparently thought better not to rebuild it in the old position; the new tower, therefore, which was begun a few years after the fall of its predecessor, and finished about the year 1675, was erected at the north end of the north transept. This tower has a remarkably good outline, and is altogether much better than might have been expected from the date of its erection. It has been, indeed, suggested, that it is from the designs of Wren, or from plans left by Inigo Jones, who is known to have reported upon the former tower before it fell.

The arcades of the nave are of Norman dates, the aisles and other parts of the church are of the Third Pointed period. The nave roof is very fine.

By the works recently carried out, the south transept has been enlarged, and the "Cross Market" and the space under the tower have been thrown into the church. A new additional south aisle has been built, corresponding with the "Cross Market," and a new vestry added at the east end of the north aisle of chancel.

The west front has been entirely rebuilt, and a new west door and window inserted. The whole of the seats and galleries have been removed, and

e church thrown open, and seated with open nches of oak. All the seats are *now entirely* e to all the parishioners. By the old system appropriation, much of the church was often actically not used at all. The nave roof has en repaired, and the space between the trusses nelled with oak. The north transept is entirely w: the roof is of oak. The roofs of the south nsept, chancel, and north and south chancel isles have been panelled with deal.

The organ has been removed from the west id, and placed under the tower. The chancel as been laid with ornamental tiling, from the rchitect's designs. The chancel seats are of rved oak. The new reredos is of alabaster, bloured cements, and tiles, by Messrs. Poole & on. The new pulpit is carved, and is orna- ented with figures of the twelve apostles. his is the gift of Mrs. Guthrie. The lectern is ne gift of Miss Gabriel, of Calne. The east indow and the stained glass in it were given y the late Marquis of Lansdowne, before the ast of the works were undertaken.

The general works have been carried out by Ir. H. W. Penning, of Marlborough. The wood- arving is by Mr. James Forsyth, of London. The gas-fittings are by Mr. Singer, of Frome; nd the warming by Messrs. Haden, of Trow- ridge.

CHURCH-BUILDING NEWS.

Denford (*North Hants*). The parish church of Denford, a small village about a mile from Thrap- ston, has been re-opened, after having under- one a restoration. Before the restoration some portions of the church, particularly the lower part of the tower, were in a very dilapidated condition. The old-fashioned high-backed pews have been replaced by open stained deal seats. A western arch, which was formerly blocked up, and partially hidden by an old organ, has been re-opened, the organ-gallery having been re- moved, and the space behind the arch thrown open. The west window has been replaced by a plain stained window from the establish- ment of Mr. Powell, of London. The entire area of the church has been re-floored, and an old screen, in the west part of the north aisle, has been restored. The old pulpit has been replaced by a modern and simple one, constructed of stained deal. The chancel has been paved with Maw & Co.'s tiles, and there are new altar-rails and table. The chancel roof consists of open rafters, which have been painted and decorated, and the roof of the other parts of the church has been stained. The edifice is warmed by hot- water pipes by Mr. Roberts, of Northampton. All the doors are new, and the windows have been re-glazed. The tower has been restored. It has been under-pinned, new buttresses have been added, and the foundations have been re- stored and strengthened. New crosses have been erected at the end of the nave and at the end of the chancel, and the tracery of the whole of the windows has been restored. The windows, too, have been re-glazed. The ground in the churchyard, which had accumulated up to the string-courses at the bottom of the windows, has been lowered. The restorations have been car- ried out under the direction of Messrs. Wadmore & Baker, of London, architects, and the builder is Mr. Walter Parker, of Thrapstone. The original contract was for 750*l.*, but the total cost of the restorations will amount to about 900*l.*

Exeter.—Thorverton Church, which has lately been enlarged and improved, has been re-opened for public worship. A north wing with an open roof, deal stained, has been added to the old building. The chancel has been raised, and paved with Minton tiles of *fleur-de-lis* pattern, ornamented with a marble border. The galleries have been removed. The old columns and stone- work have been cleaned down and the carving restored. The old seats have been replaced by new ones of oak, carved by Messrs. Rattee & Ketts, of Cambridge. The tower has been thrown open, so that the west window may now be seen from the interior of the building. A good many of the windows have been restored. The cost of the whole of the work done is about 2,200*l.* Mr. T. H. Elliott, of London, prepared the plans and superintended the execution of the work. Mr. Seymour, of Taunton, executed the stone carving.

Cheltenham.—The new cemetery at Prestbury has been consecrated. The burial-ground and approaches embrace an area of about 18½ acres. The property was purchased for about 3,420*l.* Mr. Knight, of Cheltenham, was the architect for the cemetery buildings. The chapel is in the Early Decorated style. The total amount expended upon the cemetery is nearly 11,000*l.* Burial spaces are provided for 39,000 persons.

Talachddu.—The church of this place has been re-opened by the Bishop of St. David's. The church, dedicated to St. Mary, was in an un- sightly state. This has been changed, under the direction of Mr. W. Nicholson, of Hereford, archi- tect, whose plans were carried out by Mr. W. Williams, jun., of Brecon, at a cost of nearly 500*l.* A painted window has been placed in the chancel, new side windows inserted, the roof boarded under the tiles with stained deal, below which shows the old framework of the roof; a chancel arch added, with new seats throughout; a vestry on the northern side of the chancel; and the tower rebuilt in timber, with tiled roof.

Trefeglwys (*near Llanidloes, Montgomery*). The church here has been re-opened by the Bishop of Bangor. The old church being in a state of general decay, it was determined, after a survey, to take down the walls to within a few feet of the foundation, they being in some places in a dangerous condition. The edifice, as re- erected, consists of a nave, chancel, and north porch; and, owing to the unusual length of the church, it was found necessary to curtail its length by the introduction of vestry, and bell- ringers' chamber, at west end, to confine the nave to its proper proportions. A bell-turret, with recessed louvre boards, rises from the roof at this point, underneath which are hung the bells from the old church. The style adopted in the rebuilding is Early Decorated; some coloured material discovered in the old walls being intro- duced in the arch stones, bands, &c. The general facing of the work is constructed of the blue rubble stone of the district. The church roof is varied by dormer lights, underneath which are traceried windows. The roofs are covered with blue Machynlleth slates, with ornamental ridge cresting—that for the chancel being of metal. Internally the roof is open to the ridge. A moulded Early Pointed arch separates the nave from the chancel. The seating is all open, with accommodation for 250 persons. The floors are laid with Maw's encaustic tiles. The carvings have been executed by Mr. Griffiths, of Chester. The entire works have been designed and erected under the supervision of Messrs. Poundley & Walker, of Kerry, Montgomeryshire, and Liver- pool; the contractors being Messrs. Evans & Son, Llanbrynmair. In connexion with the erection of the church, we understand that it is intended to erect new school premises.

Fladbury (*Worcestershire*).—The chancel of Fladbury Church is now undergoing a repair and restoration, under the direction of Mr. Preedy, the contract having been taken by Mr. Epsley, of Evesham, builder; and the masons' work under the charge of Mr. Hurn, of Worcester. A large stained-glass window for the east end, and one for the south of the chancel, in commemora- tion of the late rector of Fladbury, are in course of preparation by Mr. Preedy.

Boroughbridge (*Yorkshire*).—A subscription list having been opened for the completion of St. James's church, with a certain prospect that the necessary funds would be forth- coming, the churchwardens and committee have completed the fabric. Gas has been introduced, and the edifice is now lighted by standards of nine lights each. The vestry has been enlarged, and lighted with gas. The pews, which had been varnished in an unsatisfac- tory manner at the erection of the church, have been cleansed, and re-varnished. To these must be added the erection of a reredos, besides other decorations of the chancel. The reredos has been executed by Messrs. Mawer & Tugle, carvers, Leeds, from designs from Messrs. T. H. & F. Healey, architects, Bradford. The roof of the chancel has also been painted a sky-blue, and ornamented with gold stars.

Mendlesham (*Suffolk*).—The chancel of the parish church has undergone a restoration. The old oak roof which was in a very dilapidated state has been removed, and a new open timbered roof substituted. The south-east corner has been taken down and rebuilt, and a new stone window put in the east end, and all the other windows restored and re-glazed. Two rows of seats have been fixed on each side, with carved tracery fronts and poppy heads to bench ends. The communion rail is of polished oak, supported by four wrought-iron ornamental standards, manu- factured by Messrs. Skidmore & Co., of Coventry. The works have been carried out by Mr. W. Rednall, builder, Stowmarket, from the designs of Mr. Christian, architect to the ecclesiastical commissioners.

Thetford.—Lord Ashburton has decided upon rebuilding Igborough church at his sole expense. The works are to be carried out in the style of the original church, which dates from the thir- teenth century. The Duchess of Grafton gives the east window, and the pulpit will be pre- sented to the church by the Hon. Alex. Baring, M.P. The timber used will be entirely oak, and the inside walls of the church will be of free- stone throughout. The whole of the works are to be carried out from the designs and under the superintendence of Mr. R. M. Phipson, of Ipswich, Architect.

FROM IRELAND.

THE Dublin Corporation have resolved to erect a new supper-room to the Mansion House, at a cost of 450*l.*, and carry out some other alterations.——A movement is on foot in this city for the organisation of a society or com- pany for the improvement of working-class dwellings on the principle of the London ones. Plans are being prepared by Mr. Charles Geoghegan, with a view only to remodelling or renovating houses, not for building new ones at present. The want of improved dwellings has been keenly felt in the city. Artisans are pay- ing high rents for miserable accommodation, and the object of the company will be to provide clean, well-ventilated, wholesome habitations for less rents than those now being paid for the dens in which the working classes are com- pelled to burrow.

There is now some prospect that an improve- ment is going to be effected in the streets of Belfast. A joint-stock company is being formed for the extension of Donegal-place, the Broad- way of Belfast, to the end of York-street; then to run a wide street from it down through that nest of filth and corruption into Smithfield. It is to be hoped, however, that the question of dwellings for those to be removed will not be overlooked, otherwise matters may only be made worse than they are as regards the poorer dis- tricts of the town.

PROVINCIAL NEWS.

Plymouth.—The foundation-stone of a Roman Catholic convent has been laid at Eldad. The architect is Mr. Joseph A. Hansom, of London, and his assistant Mr. Charles Clifton, of Stoke. The builders are Mr. S. Hallett, of Plymouth, and Mr. T. Jenkins, of Devonport. Mr. John Ley is clerk of the works.

Hexham.—At a meeting of the shareholders of the proposed Corn Exchange and public build- ings for Hexham, the chairman said that the meeting had been convened, first, for the pur- pose of considering the propriety of abandoning the first plans that were submitted to the share- holders for their new buildings; secondly, for the purpose of adopting the new plans now before him. The reason for these steps was, that every effort except letting their premises at the expense of encumbering the property had been tried to raise the capital of 8,000*l.*, but in vain; and the directors had agreed to have plans on a more limited and less expensive scale. Mr. Beaumont proposed, at his own expense, to get new plans prepared, and to take care that those plans were within the sum they had now subscribed, viz., 6,000*l.* These plans they had before them, and Mr. Johnstone, the architect, assured the directors that the buildings could be erected according to these plans for the sum named. The meeting approved of what had been done and adopted the plans.

UTILIZATION OF THE SEWAGE.

St. Saviour's.—The St. Saviour's District Board of Works have passed a resolution (to be forwarded to the district boards and vestries) to the following effect:—"That in the consideration of this meeting the time has not yet arrived for coming to a decision upon the best method of disposing of the sewage of the metropolis, as sufficient information as to its value is not pos- sessed by any public body having the power to dispose of it; and therefore, in the opinion of this meeting, the subject should be investigated by a committee of the House of Commons; and farther, that the clerk be entrusted to prepare a petition for presentation to the House of Com- mons, and that the parliamentary representatives

of the borough be requested to support the prayer of such petition."

Kensington. The Kensington vestry have resolved (as an amendment on a motion of approval), "That it is the opinion of this vestry that the interest of the ratepayers has not been sufficiently considered by the Metropolitan Board of Works in the scheme adopted by them for utilising the valuable sewage of the metropolis."

Dorchester.—This subject was brought before the Dorchester Local Board, in a report by Mr. Jowett, the surveyor. It is proposed to raise the sewage by steam-power, and to apply it by gravitation to extensive meadows in the neighbourhood. The surveyor also recommended the application of the dry earth system to a portion of the town that had not been fully supplied with waterclosets, so that the system might be fairly tried.

RAILWAY MATTERS.

The entire length of the Metropolitan Extension of the Chatham and Dover line commencing at Beckenham, running direct to Herne-hill, where it branches off in two lines, one going to the City, the other to the West End or Victoria Station, is now in working trim, the only portion not yet completed being the short length from the Blackfriars Station on the Surrey side to the Ludgate Station. The entire length will be within a few yards of 12 miles. The bridge across the river is now ready for traffic, but the station at Ludgate is not quite completed. The capital authorized for this extension amounted to 5,783,000*l.*, or a cost of about 500,000*l.* per mile. The result of the working on this portion of the line during the last half-year was by no means of a satisfactory character: the total receipts were but 31,355*l.*, or about 100*l.* per mile per week. After deducting the working expenses, which were set down at 50 per cent., the balance available to pay interest on nearly 6,000,000*l.* of capital was but 15,677*l.* The extension to Ludgate Station, and ultimately to Farringdon-road, will, of course, add considerably to the traffic receipts.——New plans have been prepared for the enlargement of the present Brighton Railway Station, London Bridge, and tenders are invited for its construction. The additional station accommodation has been rendered necessary by the prospect of the traffic which will be brought to London Bridge upon the completion of the South London line in May. The line between Bermondsey and London Bridge has been widened, and two additional rails have been laid. The station will come close to the back of the International Hotel, and will extend to the south side of St. Thomas's-street. In connexion with this widening of the line, the directors have carried out the formation of a new and wide thoroughfare direct from St. Thomas's-street to Bermondsey. One side of this new street is formed by the station and viaduct of the line.

MAGNESIUM AND ITS LIGHT.

Aluminium's nose is being put out of joint by its Magnesian sister, whose luminous powers better entitle it to the name of Aluminium than aluminium itself. The interior surfaces of caves, mines, catacombs, and pyramids will now be revealed in endless photographic *fac similes*; for magnesium yields a light which vies with the electric or the solar light itself. It burns with facility in the form of fine wire which costs in retail some 3d. a foot, and when the demand for it increases the price will be far less. A lamp has also been invented for its use. The light is visible by night for 28 miles at sea, and how much farther remains to be seen. It is said some shopkeepers intend to astonish the Londoners this winter with its brilliancy. For illuminations it will be splendid. The light is of a rich and mellow white hue. The supply of magnesium is inexhaustible. Immense quantities exist in the form of stratal rocks, and the ocean abounds with it. Light in weight as aluminium is (2·60), magnesium is only one half its specific gravity almost, being only 1·74, or less than a fifth of the weight of copper. If aluminium was a marvel of lightness, therefore, magnesium is a marvel of marvels. When pure the metal is white as silver, and it readily receives a high polish, and is easily kept clean. In some cases it is very tough, but in others it is brittle, in this resembling zinc and aluminium itself. Improvements in the economy of its production are still being made. M. Sonstadt produces it by a new process. It is interesting to witness the production of wire from a mass of magnesium by hydraulic pressure through a small orifice, from which it issues like a little stream of silver, but solid. It is said that 2¼ oz. of this magnesium wire will give out as much light as 20 lb. of the best stearine. At this rate magnesium is already not much dearer than composite candles; and as the process by which the metal is now produced is but about four months old, we may hope that still further improvements will be effected, so as to render the substance commercially suitable for ordinary purposes. Hence peril to the gas companies, as well as to the oilman and the tallow-chandler. The magnesium light is so purely white that it exhibits every colour it falls upon with the fidelity of the sun itself. Another extraordinary fact is this, that the magnesium flame gives off no noxious fumes,—no sulphurous gas, carbonic acid, sulphuretted hydrogen,—blacks and stink, and heat and wet,—damaging paperhangings and the finest furniture, corroding metals, and injuring health. The burning of magnesium simply produces the oxide,—magnesia, which domestic economists may gather up for the benefit of the family medicine-chest. Nor is there any risk of explosion, as in the case of gas and some oils.

CASES UNDER METROPOLITAN BUILDING ACT.

Party Walls.—At the Hammersmith Police Court, Mr. Knightley, district surveyor, attended in support of a summons against Mr. C. Horn, for erecting the walls of water-closets in the rear of premises in the Askew-road, of a thickness of 9 in. instead of 8½ in. The defendant argued that the Act did not apply to water-closets. Mr. Dayman decided against him, and said he should apply to the Metropolitan Board for permission to retain the walls. The summons was adjourned for a month, to allow Mr. Horn an opportunity of applying to the Board.

Wooden Buildings.—A summons was heard against Mr. James Anatias, for building a wooden stable, in St. John's-terrace, Latymer-road, instead of enclosing it with 9 in. brickwork. The defendant said the back of the stable was of 9-in. brickwork. The district surveyor said two sides of it were wood; the other two sides rested against the house and garden walls. Mr. Dayman said the defendant had subjected himself to a penalty. He was liable to have an order made to enclose the stable with brickwork, and in default to a penalty of 20*l.* for every day it was not done. The defendant said it was done. Mr. Knightley said it was not done when he last inspected it. The defendant had given him a great deal of trouble. Mr. Dayman then made an order for the work to be done in a month, and for the payment of 2*s.* costs.

Books Received.

Designs for Works in Stained Glass. By Messrs. Heaton, Butler, & Bayne. King-street, Covent Garden.

Under this title, Messrs. Heaton, Butler, & Bayne have issued an excellent Trade Book, containing as well as representations of a number of windows executed by them, some sensible observations on glass-staining, and a tariff of prices for various descriptions of work. Information is also afforded as to the cost of painted decorations and memorial brasses. Amongst the works executed by them, of which outlines are given, are the west window, Watford; west window, St. James's, Dover; Acts of Mercy window, Sprowston Church, Norfolk; and the east window, St. Chad's, Lichfield. The illustrations are very artistically set forth. We should be sorry to infer, though we might have been led to do so by one of the notes, that the firm consider that bad drawing of the human figure is preferable in stained glass to good.

The same note mentions the curious circumstance, that while the fine old windows in the cathedrals of Bruges and Chartres are composed of nine or ten tints of glass, nearly 140 different tints are now used in the production of a stained window. We have advanced in science, not in art.

Messrs. Heaton, Butler, & Bayne's publication cannot fail to advance their object.

VARIORUM.

The Council of the Art-Union of London have issued their capital little Almanack. It may be worth while to repeat that this almanack contains, besides the usual information, particulars of artistic and scientific bodies, public exhibitions, British and other collections of pictures not to be found elsewhere in a collected form. The Society's Annual Report is now ready for distribution. The print of the year ought to get a large subscription-list. —— The Christmas extra number of "London Society" includes contributions from Mr. Mark Lemon, Mr. H. J. Byron, and others, with numerous illustrations. We quote a paragraph or two, showing how the first-named writer obtains sensations in *Thames street*:—"We have more than once sought the excitement of Thames-street when business was at its height, and have found that a walk down that river-side thoroughfare has dispelled every other feeling but one of thankfulness for a safe deliverance from danger and death. Let any *malade imaginaire* try it. The bags, barrels, and bales swinging over-head from every gradation of height, the jamming of carts and cabs, the unparliamentary 'cheeking' (we believe that is the word) of cabmen, carters, and truck-haulers,—the bawling of grimy coal and corn-porters (who certainly ask, 'By y' leave,' but require such an immediate compliance, that if you hesitate a moment you are pirouetting in the gutter), the roaring which comes from the opened windows of gloomy tap-rooms, filled with half-tipsy fellows, emitting clouds of most villanous tobacco, are a combination of exciting causes sufficient to stimulate the most desponding."——The editor of the *Art Journal* closes his volume with an excellent number, including a forcible engraving by Brandard after Turner's "Bligh Sand," "Hunt the Slipper," by E. Goodall after F. Goodall; an illustrated memoir of Mrs. E. M. Ward; and a charmingly-written notice of the admirable acting of Miss Helen Faucit as *Imogen*, under the heading "Art on the Stage," wherein we detect the kindly enthusiasm and elegant pen of Mrs. S. C. Hall. "The Early Potteries of Staffordshire, by Mr. L. Jewitt, and the "History of Caricature," by Mr. Thos. Wright, illustrated by Mr. Fairholt, are carried on a stage effectively. We are glad to observe that Mr. Hall intends to publish in the new volume his "Memories, from personal Acquaintance, of the most illustrious Authors of the Age," the outlines of which, in the shape of lectures, have already given pleasure and information to large numbers of persons. A series of papers, by Mr. Ruskin, entitled "Right and Wrong in Art," is also announced.——We are glad to see that Mr. Edwin Chadwick's suggestive and valuable address delivered at the York meeting of the Social Science Association is published in a cheap form for distribution (Hardwicke). It treats of the effect of manufacturing distress, manufacturing progress, and of the improvement of the condition of the wage classes in agriculture as well as in manufacture ——The *Gentleman's Magazine* for December (Parker, Strand) contains several interesting papers, as on Jarrow Church, by Mr. O. Jewitt; on Holed Stones, by Mr. R. R. Brash; on the Corona Lucis at Aix-la-Chapelle, and others, besides the usual monthly intelligence of various kinds. The paper on holed stones is a curious one. From it we find that in Europe, Asia, Africa, and America, are found the holed stone no less than the stone circle, the cromlech, the pillar stone, and the rocking stone; and, as the author remarks, "we are not to suppose for a moment that the reverence for sacred stones in India originated with the polished and metaphysical Brahmin: it is evidently, as with us, a remnant of the primeval religion of a primeval race." Traditionary practices show that curious ideas as to the regeneration were associated with holed stones. Children were passed through the holes, and so became regenerate, reminding one of the passing of children "through the *fire*" to Baal,—or god-possession. When the hole was not large enough, the hand was passed through, and this was held equivalent to the whole body passing through. Compacts and engagements were also made while hands were joined through the orifice; and marriage compacts even were thus solemnized, no doubt with a mystical allusion to that divine marriage (in the regeneration) to which the coming of the heavenly kingdom in man is compared. The superstition of the efficacy of "passing through" is said to be prevalent among the Turks; and of the Hindus the author remarks that "the passing through caves, holes between rocks, and holed stones, was with these people symbolical of passing through the sacred yoni,—being born again,—regenerated."—— *Fraser's Magazine* for December (Longman & Co.) contains an amusing paper on Curiosities of the Patent Office; one full of wise saws, titled "Concerning Ten Years, with some Account of Things learned in them, by A. K. H. B.;" a leading paper on Ireland; and much other interesting

and entertaining matter.——The *Social Science Review* for December contains a leading paper on the International Congress of the Social Sciences; some hitherto unpublished verses on the pre-Adamite world and the creation of man; a paper on wet-nursing by strangers and its ill effects; one on town and village kitchens for the poor; and others.——"Report of the London and Provincial Turkish Bath Company. The Hammam, Jermyn-street. October, 1864." From this Report it appears that the Turkish-bath system, so far as regards the Hammam, at least, is prospering in London. The directors propose a dividend, at the rate of six per cent. per annum, for the last half-year. Several alterations and additions have been effected in the bath building.——"The A B C., or Alphabetical Railway Guide" (Tweedie), "showing at a glance how and when you can go from London to the different stations in Great Britain and return; together with the fares, distances, populations, and cab-fares from the different stations; also a new map," is certainly an improvement on Bradshaw, if not quite "as easy as A B C."——"A Hand Book of Formulæ, Tables, and Memoranda, for Architectural Surveyors and Others engaged in Building." By J. T. Hurst, C.E. (London: Spon, Bucklersbury, 1865). This is a concisely written "hand-book," in a convenient form, and though with no pretensions to originality, it contains several formulæ and tables now published for the first time; and some surveyors' subjects have also been expressly written for the work in hand.

Miscellanea.

Architectural Association, Voluntary Examination Class.—The class will meet as usual, on Tuesday next, the 13th December, at 7·30 p.m., when Mr. R. Lidstone (Clerk of Works), will explain the construction and practical use and efficiency of "Scaffolding and Shoring."

Pictorial Decoration.—Mr. Scott, recently master of the Newcastle School of Art, whose pictures illustrating the history of Northumberland, and intended for the decoration of a hall at Wallington, a seat of Sir W. C. Trevelyan, were exhibited in London, has been commissioned by that baronet to fill the spandrels over an arcade, which forms a sort of triforium above those pictures, with subjects from "Chevy Chase."

Premiums, Winter Exhibition.—The prizes offered by Mr. Wallis of 100*l.* for the best figure picture, and 50*l.* for the best landscape in the present exhibition, have been awarded, the former to Mr. W. G. Orchardson, for "The Challenge;" and the latter to Mr. H. W. B. Davis, for "Morning on the Salaises of Boulogne," the adjudicators being Messrs. E. M. Ward, R.A.; R. Redgrave, R.A.; F. R. Pickersgill, R.A.; Tom Taylor, Lewis Pocock, and A. J. Brunton. Mr. Wallis has also given an extra prize of 50*l.* to Mr. J. Morgan for his picture of "Raising a Church-rate."

Modern Illuminations.—The Illuminations by Female Artists, sent in reply to the offer of premiums by Messrs. Fuller & Co., are now exhibiting. The temptation was not very great, and the works are for the most part poor. For the money prize seven have been sent, of which the two marked respectively *Labor omnia vincit* and *Non vi sed voce*, seem to have most claims. In the miscellaneous collection, some by Miss J. Batty and Miss L. Batty deserve praise. There are several well-written texts. The introduction of photographs, to mask the prevailing inability to draw the figure, is a mistake.

The Park Lane Improvement.—A deputation from the Metropolitan Board of Works had an interview with the First Commissioner of Works, on Monday, at Whitehall-place, to explain the plans for this improvement, and ask the aid of Government in carrying them out. Mr. Cowper said the plan for widening Park-lane would be a very expensive improvement; but for the opening of Upper Hamilton-place every facility would be given on the part of the Crown. The cost, however, should be at once faced by the Metropolitan Board, unless it could plead poverty. Mr. Cowper gave no hope of Government aid in paying the cost of the improvement, but he said they might give up their property for a public object, like other people.

British Archæological Association.—At the meeting on Wednesday, December 14th, papers will be read by Dr. Kendrick on the Discovery of Roman Brine Pans at Northwich; and by Mr. Blashill on Sepulchral Crosses in Herefordshire.

Proposed Industrial Exhibition at Wakefield.—It is proposed to hold an industrial exhibition in Wakefield, on the plan of the one lately held in the north of London. A meeting of gentlemen to consider the feasibility of the thing was convened in the vestry, and a resolution was arrived at to solicit the opinion of the employers of labour in the town.

Monster Whistle.—An extensive apparatus, of iron and brickwork, is in course of erection, at the west pier-head, Kingstown, Cork, for the purpose of sounding a loud whistle, similar to a steam one, in foggy weather, so as to prevent casualties occurring to the mail-steamers or other vessels approaching or leaving the harbour during thick weather. The coves of Cork will be pleasantly enlivened by this new warbler.

The Survey of Jerusalem.—Mr. Fergusson states that the survey of Jerusalem under Lieut. Wilson and his party of Sappers is going on most satisfactorily. The Pasha's authority affords them complete protection, and he gives them every facility they require, so that by next summer we may hope to have as perfect a survey of Jerusalem as we have of any English city, and to know as much as can be known of its mysterious water supply, and of the means by which its sanitary condition may be improved.

East London Industrial Exhibition.—The committee finding themselves unable to obtain a proper building for the proposed Exhibition, have now given their attention to obtaining the erection of a large Exhibition Hall, with museum, large and small meeting-rooms, offices, &c., to carry out every effort which bids fair to benefit workers of both sexes and all ages, who, by the labour of their hands or minds, provide for themselves, their families, or their dependants, and this by a Limited Liability Company, with a capital in 1*l.* shares, to be held, if workers will, by workers, which company shall raise the premises required, to be devoted entirely to the advancement of their intellectual and physical condition.

Colour: the Trocheidoscope.—With reference to a notice of the meeting of the Liverpool Architectural Society, in a recent number, Mr. G. A. Audsley writes:—"The general principles on which my instrument is constructed are the same as those on which the instruments invented by Mr. Rose some years ago, the common 'Colour Top,' and the 'Trocheidoscope' of Mr. Goodchild are arranged. All I can claim for my machine is, that by adopting a vertical position for my revolving discs, &c., instead of the usual horizontal one, and by a very brilliant mode of illumination, I render the effects of colour visible at a great distance, and to any number of persons at a time. I have also introduced a series of compound motions, by which I obtain some striking effects as well as continuity. Although I may have done a little towards the development of a very useful and interesting class of instrument, I lay claim to no credit connected with it, much less to being its inventor."

Dwellings for the Working Classes in Liverpool.—At a meeting of the Liverpool Health Committee an important discussion took place on the question of the demolition of badly-constructed court and alley houses at present inhabited by the poor. It was urged, that by the demolition of these places thousands of working people would, by the destruction of their dwellings, be placed in a worse position than that which they now occupy. Mr. H. T. Wilson moved a resolution to the effect that the council be requested to instruct the finance committee to give every facility for the erection of model cottages on land belonging to the corporation. He also urged the necessity of erecting such cottages close to the docks, where the majority of these poor people work and reside. Mr. J. R. Jeffery believed, that if the different railway companies were appealed to, they would not only permit model cottages to be erected in the neighbourhood of their line, but they would carry the working classes from and to their homes at cheap rates. Ultimately the motion of Mr. Wilson was agreed to. The model cottages will surely be built and ready for occupation before the old dwellings are demolished.

Graphic Society.—The first *conversazione* will be held on the 14th inst., the committee being Mr. Frost, Mr. E. Goodall, Mr. Maguire, and Mr. Ward. The new members who have been selected are—painter, Mr. W. J. Grant; sculptor, Mr. Joseph Durham; architect, Mr. E. M. Barry.

Operative Coachmakers' Industrial Exhibition.—The Company of Coach and Coach-Harness Makers of the City of London have granted the use of their hall for the purposes of this Exhibition. The Society of Arts, with the Company of Coachmakers, will nominate judges and present the prizes and certificates of merit.

An Offer to Sell a House is Selling it.—The Marchioness of Ely offered to sell her house to Mr. Chinnock for 10,000*l.*, but she afterwards changed her mind and asked him to withdraw his offer to take it. He would not do so, and her ladyship's solicitor then imposed conditions which he objected to, and he filed a bill in Chancery for specific performance of the agreement. The Vice-Chancellor held that her ladyship must sell Mr. Chinnock her house.

The Bells of Santiago.—The South American steamer *Osiris*, from Hayti, has brought home thirty-three bells, as part of her cargo. These bells formed the chimes of the church of San Juan, Santiago, previously to the sad catastrophe which destroyed that edifice. They bear upon them proofs of the intensity of the flames, in which so many lives were sacrificed. The ornamentations by which the bells are embellished are rich and profuse. Each bell is dedicated to some particular saint, and is in its designs typical of the leading features in the life of the saint in whose honour it has been cast. The bells were made in 1819, and range in weight from 40 cwt. to 5 cwt. They are brought to this country to be recast, and sent out to Santiago again.

The Bakehouses' Regulation Act.—A crowded meeting of operative bakers was held on Saturday night at the Cranbourn Hotel, St. Martin's-lane, to receive the report of the deputation which had waited upon Mr. Leyard, M.P., on Tuesday last, with respect to the defective manner in which the provisions of this Act were carried out. The result was that the Home Secretary had consented to receive a deputation from the journeymen next week, when, if they could prove their statement, steps should be at once taken to remedy the evils and enforce the provisions of the Act. A long and animated discussion ensued, from which it appeared that all the evils the Act was intended to remove still existed in full force, the great majority of those present personally experiencing them. It was then resolved, that Messrs. Bennett, Blake, More, Webb, and Pidgeon should form the deputation to Sir George Grey. A resolution was then adopted, declaring it to be desirable that nightwork in the baking trade should be abolished, and that the hours of working should be from 4 a.m. till 4 p.m.

The Bar Gate, Southampton. The restoration of the south side has been completed by the insertion of the stained glass window presented by Mr. Councillor Lanham. The stucco which until about two years ago defaced the south front of the Bar has now been completely cleared away, the whole stonework renewed, and in place of the old windows there are four equilateral headed windows, in the Decorated style, with trefoil heads, the two lights having cinquefoil cuspings. The corbel heads supporting the weather moulding, and also the stained windows themselves, present, in chronological order, those of monarchs who have granted charters to the town of Southampton, and who consequently are supposed to have been in some way or other connected with the building. That at the public entrance to the Guildhall contains the figure of Queen Victoria. These improvements were carried out under the superintendence of Mr. Stevens, builder. Upstairs, the first window on the left hand contains in the trefoil head three roses, the borough arms. The whole of these trefoil heads are fixed so as to admit of their being opened for ventilation. Each of the lights in the windows contains a shield within a label or wreath, the quarries being filled with designs and banded with labels. These windows have been supplied by Messrs. Heaton, Butler, & Bayne, of London, at the expense of Mr. Councillor Lanham. In order to make the hall correspond with the windows, it requires to be painted and decorated.

Hindoo Incinerator.—A design by Mr. W. Clark, engineer to the Calcutta Justices of the Peace, for a "proposed incinerator for Hindoo burning ghat," has been published in the form of a lithograph, from a copy on transfer paper prepared by Mohumed Azeem, and printed at the Surveyor General's Office, Calcutta. The lithograph gives sketches of the front elevation in furnace form, with plan, and side and end views of the interior, showing the cross piles of wood and the body stretched among them; with plan of the flue leading to the chimney.

The Proposed New Law Courts.—Circulars from the solicitors to the Commissioners of Works and Buildings have been received by the leaseholders, freeholders, and occupiers of the houses and buildings situate in Carey-street, Lincoln's-inn, Bell-yard, Fleet-street, the Strand, Old and New Boswell-court, St. Clement's-lane, Ship-yard, Serle's-place, Yeates's, New, Plough, Star, Crown, Hemlock, and Newcastle courts, in order to ascertain, by the 15th inst., whether they assent, dissent, or stand neuter, in the application to Parliament for an Act to empower the commissioners to acquire the respective properties, by purchase, for a site to erect the new courts of law, with the offices connected therewith.

Guildhall-yard, City.—An agreement has been entered into between the Court of Common Council and the City Commissioners of Sewers to carry out some improvements in Guildhall-yard. The Commissioners have arranged to take possession of the churchyard of the parishes of St. Lawrence Jewry and St. Mary Magdalen, Milk-street, for the purpose of improving the thoroughfare leading into the Guildhall-yard. The sanction of both the above bodies has been obtained, and it is expected that in a short time the alterations will be effected. The newspapers say, adjoining to these alterations it is proposed to erect on the site of the Guildhall Tavern an extensive building as a public auction mart, in consequence of the original auction mart in Bartholomew-lane, opposite the Bank, having been disposed of.

Registration of Designs.—The Court of Queen's Bench has decided that the 20 & 21 Vict., chap. 70, sec. 5, which enacts that the registration of any pattern, or portion of an article of manufacture to which a design is applied, instead or in lieu of a copy, drawing, print, specification, or description in writing, shall be sufficient, applies to cases where the novel design is a combination, as well as to cases where it is a simple design, complete in itself. The point arose in the case of Macrae *v.* Holdsworth, where the inventor of a design to be applied to woven fabrics, consisting of the combination of a certain groundwork with ornamental stars of a particular form, had registered a portion of the woven fabric to which the design had been applied, unaccompanied by any explanation or description of the design which he claimed as his invention. The Court held that the registration was sufficient.

An Iron Letter.—By the last American mail a letter, which is remarkable both as a documentary curiosity and as a specimen of manufacturing skill, was received by the *Birmingham Journal*. It is written on iron rolled so thin that the sheet is only twice the weight of a similar sheet of ordinary note paper. The letter is dated, "South Pittsburg (Pennsylvania), November 6th, 1864," and says:—"In the number of your paper, dated October 1st, 1864, there is an article setting forth that John Brown & Co., of the Atlas Works, Sheffield, had succeeded in rolling a plate of iron 13½ in. thick. I believe that to be the thickest plate ever rolled. I send you this specimen of iron made at the Sligo Iron-works, Pittsburgh, Pennsylvania, as the thinnest iron ever rolled in the world up to this time, which iron I challenge all England to surpass for strength and tenuity. This, I believe, will be the first iron letter that ever crossed the Atlantic ocean.—Yours, &c., John C. Evans." The iron is said to be of exceedingly fine quality, and the sheet by far the thinnest ever seen in this country. The letter will be deposited in the Museum of the Midland Institute. Tested by one of Holtzappfel's gauges, the thickness of the sheet is found to be one-thousandth part of an inch! A sheet of Belgian iron, supposed hitherto to be the thinnest yet rolled, is the six hundred and sixty-sixth part of an inch thick; and the thickness of an ordinary sheet of note paper is about the four-hundredth part of an inch.

The Building Trades.—At Maidstone meetings of carpenters have been held for the purpose of considering the best means of procuring an increase of wages for carpenters and joiners. It was decided to present a memorial to the builders of the town, asking for an increase of 6d. per day.——There is a strike among the builders' labourers at Holme Head, near Carlisle. In a letter addressed to one of the leading firms in the town by the committee of the Labourers' Society they say, "If you are desirous of employing them according to the rules of the Society we are quite willing to comply with that request, provided that you expel the non-society men. If not, you will not get one man to attend." There are some sixty or seventy "society men" in the town on strike; but the masters are not likely to give in upon the point in dispute, as they have already supplied their wants.——The plasterers of Carlisle have struck work, to the number of about twenty, against the short-day reduction of wages to the extent of 2s. a week.

Bursting of a Reservoir in Cumberland. A reservoir of three acres, near Harrington, has burst, and deluged the main street with a wide stream described as some 4 ft. or 5 ft. in depth, the main body of the water finally emptying itself into the harbour. The torrent came rolling along in high waves, inundating houses, sweeping off movables, and occupying several minutes in passing. Fortunately no one was injured, all the damage done being confined to property. The reservoir was one recently constructed to supply new ironworks of Messrs. Bain, Blair, & Patterson. It was constructed in a valley, the adjacent hills forming the two sides, and the low end being shut in by an embankment about 300 ft. in length and 20 ft. high. This bank was 5 ft. thick at the top, and gradually spread out, of course, towards the base, sloping on either side. The sides were formed of battered earth and clay, a section of clay puddle being placed in the middle. It is about ten months since the construction commenced, and it was almost completed when the catastrophe occurred. The water burst through a chasm some 10 ft. wide. As soon as the danger was seen to be impending, the alarm was given to the town, and the streets were cleared. The parapet of a bridge was washed down; deep holes were made in the main street; and the foundations of a railway bridge were injured.

An American Saw-setter.—Nash & Doland, Watertown, Jefferson county, N. Y., manufacture a saw-set which is said to be good for setting hand-saw teeth of every size. It is grasped in one hand, as one would take hold of a pair of forceps. As described, it consists of a small iron frame, with two ears which support a short lever and a part of the handle, and one end of the lever is acted on by a short portion of the handle; then there is a spring to throw back the lever, and there is also a set-screw and gauge to set every tooth little or much, and they are set with the greatest accuracy without battering the teeth.

Hot Water in Houses.—We hear of a new apparatus, contrived by Mr. W. Binks, of Manchester, for conveying hot water through houses and buildings. The *Manchester City News* thus speaks of it:—It may be described as an ordinary bath boiler placed behind the fire (when fixed), and connected therewith is a small cylinder—called the safety cylinder—of a nature hitherto unknown in the trade. This cylinder is connected in the usual manner with the old water-circulating cistern; but instead of being at the highest point of the building, by means of two long lengths of circulating pipe, it is placed in immediate contiguity to the bath boiler. The consequence is, that the water, having only a short space for action between the safety cylinder and bath boiler, it is constantly being circulated at a rapid speed throughout the various pipes in every part of the house or building, thus rendering the water as hot at the highest point as it is in the boiler—that is to say, whether the water is drawn directly out of the boiler or out of a tap in the top-most room of the house, its heat is nearly equal. It will thus be seen that the small cylinder produces such an action of the water in the boiler and pipes that an explosion is absolutely impossible. Neither frost nor short supply of water can affect the working or safety of the apparatus. The bath boilers at present in use are constantly liable to burst from various causes, and from past experience we know how serious are the consequences arising from such explosions, not only to life, but to property.

St. Patrick's Cathedral, Dublin.—A window memorial of Sir John Andrew Stevenson, Mus. Doc., has just been erected in St. Patrick's Cathedral. It is the work of Messrs. Ballantine & Son, Edinburgh. The subject of the window is Early English, treated in the mosaic style. It introduces David singing one of his psalms, accompanied by himself on the harp, and surrounded by groups of Israelites listening to his divine strains. In the upper medallion of the window are seen three angels with musical instruments, as if repeating the melody. At the base is a harp suspended on a cross, the whole being surrounded with groundwork and border ing, in the early style of glass.

TENDERS.

For a public-house, at Warlingham, Surrey. Mr. R. W. Drew, architect. Quantities supplied by Mr. J. A. Bunker:—

Turner & Sons	£1,049	0	0
Diblin	975	0	0
Wood	968	0	0
Dawson	912	0	0
Child & Son	857	0	0

For alterations required for additional accommodation to tramps' wards, Fulham Union. Mr. W. L. Gomme, architect:—

Pitts	£413	8	0
Snelling	357	0	0

BUILDING LAND TO BE LET, by Tender, on 19 h DECEMBER.—PIPER'S TRUST ESTATE, Tyndall-road, Clapham-rise.—Full particulars of Tender and Plans to be obtained at the Surveyors' Offices, WALES & SPARKS, 8, Great Saint Helen's, E.C.

LARGE, Light, Substantial WORKSHOPS TO BE LET, just erected. Four floors, each about 1,000 square feet, within five minutes' walk of the City and three bridges. Also, together or separately, a House and Shop in the main thoroughfare adjoining.—Apply at the premises, 21, Whitechapel.

EXHIBITION ROOMS.—TO BE LET, upon the Estate of Sir Henry Pottinger, the GALLERY of the SOCIETY of BRITISH ARTISTS, consisting of Five lofty Rooms.—For terms and THOS. ROBERTS, Secretary. Suffolk-street, Pall Mall East.

SUNBURY COURT ESTATE. -This Estate is now TO BE LET, on building Leases, for the erection of detached Residences of a superior class. The property is situate within a mile of the Sunbury Station on the Thames Valley Railway.—For particulars, apply to Mr. R. B. ARNIZ, Architect and Surveyor, 11, Cannon-row, Westminster, S.W.

PREMISES.—Very valuable PREMISES, situate on a main and populous Local thoroughfare, on the north side of the Bath Road, and a few minutes' walk from the Hounslow-road, and lately occupied as a timber merchant, who realised a large fortune thereon. The great capacity of premises, and to the increase of railways in the metropolis, render them highly valuable for the wants of any one putting large and central valuable stock.—Apply to E. & W. SHURGE, Rose Wharf, Cannon-st. E.C.

VALUABLE BUILDING SITE TO BE LET, BULLIER STREET, City.—The Clothworkers' Company are prepared to receive TENDERS for a BUILDING LEASE of the SITE of the premises known as No. 18, Bullier-street, for the term of Eighty years, as from Christmas next.—Particulars and a plan may be obtained of R. R. BOWDEN, Clerk to the Clothworkers' Hall, 49, Mincing-lane, E.C. Tenders are to be delivered before TUESDAY, the 27th instant, at Clothworkers' Hall.

FREDERICK W. PORTER, Surveyor. 16, Russell-square, W.C. December 9, 1864.

WATERSIDE MANUFACTURING PREMISES, with Steam power.—Messrs. FULLER & HORSEY are instructed to LET, on Lease, the VALUABLE PREMISES, occupying a space of 2,000 superficial feet, situate on the Wapping, Limehouse, and Poplar Basins, and admirably adapted for the Brick and Timber trade, consisting of a commodious and substantial Brick and Slate Dwelling-house, with 20 horse power steam engine and three tubular boilers, range of brick and timber sheds and open yards with quick and extensive Thames water frontage of 200 feet, and Dock Entrance.—Further particulars, apply to Messrs. FULLER & HORSEY, 10, Billiter-street, London, E.C.

EXTENSIVE BUILDING SITE, in Bankside, Borough, containing an area of about 17,000 square feet, with a frontage of about 75 feet to main street, offering a first rate position for a music hall, theatre, or other public building, and to the middle of one of the most thickly populated districts in the metropolis, or a fine site for extensive warehouses, shops, or manufacturing premises. There is a limekiln attached to the property. Further particulars of Messrs. DEBENHAM & TEWSON, 80, Cheapside, where a plan can be seen.

BUILDING LAND TO BE LET, at WANDSWORTH, close to Station.—For particulars, apply to Mr. W. JOY, 5, Bow court, Walbrook, E.C. from Ten till Five; or at North end, Croydon.

TO BUILDERS, CAPITALISTS, &c. The following PLOTS of FREEHOLD LAND, situate at Fulham, ARE TO BE LET, on Building Leases, on such terms as will enable the Lessee to erect first-class Residences, suitable for genteel families, with immediate possession. Gravel soil; sand for building. Main drainage nearly completed.

No. 1.—North side of Fulham-road, opposite Munster-terrace; 154 yards, 1,045 feet frontage to road; total frontage, 4,500 feet. Two acres of the Freehold would be Sold.

No. 2.—South side of Fulham-road, opposite Mr. Dancer's; 6 acres; 373 feet frontage to road; depth, 845 feet; 1,420 feet total frontage.

No. 3.—On north side Harleyford-lane, between Malcroft House and Broomhouse; 342 feet frontage, 200 feet deep; overlooking a main road 20 acres.

No. 4.—Blake road, entered from Princess-terrace, Walham Green; 4 acres; 1,000 feet frontage shall state; with large back area for stables or cottages.

No. 5.—A Plot of 10 acres, overlooking Bel Brook Common; main drainage sewer running through it from north to south; main road, 1,000 feet long, 50 feet wide, already formed. Total building frontage, 3,920 feet.

No. 6.—Fulham Field, for 60 cottages on two main roads.

No. 7.—North end near the Hermitage; 1,100 feet frontage.

No. 8.—On the banks of the Thames, nearly 10 acres; 2,760 feet frontage to the river, and 400 feet in depth. A large quantity of screened Pit Gravel for Sale, cheap.—For particulars apply at Mr. A. MOSELEY'S Office, 7, Charing cross, S.W.

CLERKENWELL ESTATE, belonging to the Governors of the Charter House.—TO BE LET, on a Building Lease or Leases, all that Piece or Parcel of GROUND, situate on the north side of Allen street, Clerkenwell; containing in front, next Aylesbury-street, from east to west, about 142 feet, and in depth, from north to south, about 93 feet; upon which is erected for warehouse or other commercial buildings or for dwelling houses.—A plan of the ground may be seen, and further particulars ascertained, at Mr. HARDWICK'S Office, Hamilton-street, Carendish-square.—Sealed Tenders for the same will be received, on or before the 1st of JANUARY, 1865.

SYDENHAM.— PLOTS of valuable FREEHOLD LAND, abutting on good roads, TO BE SOLD (Land Tax redeemed), about eight minutes' walk from either Upper or Lower Sydenham Stations.—For particulars, apply to Mr. NICHOLAS LAKE, Architect and surveyor, 1, Adelaide place, London-bridge.

TO BUILDERS.—TO BE LET, on account of the death of the Proprietor, a capital old-established BUSINESS, for many years successfully carried on by the late Mr. Robert Cant, at Romford, undergoing extensive repair, of 300 per annum. From an 1800 Deposit, all Plant and fair value, or will be Sold off at the option of the Purchaser. The Business and Premises are compact and convenient. For immediate For further particulars, apply to Mr. S. FLETCHER, Romford Essex

AN ACRE of LAND is WANTED to BUILD On (moderate) ALMSHOUSES on. The north side of London, and near a railway station, preferred.—Particulars to be sent to Messrs. HUNT & STEWARD, 4, Upper Charles-street, Bartholomew-street, E.W.

TO BE LET, VICTORIA POTTERY, Light, Essex.—Extensive and valuable Pottery Works, situate close to waterand railway communication. The Property consists of about 35 acres of land, nearly 5 acres of which are covered by kilns, which comprise 7 kilns for Bristol ware, 7 for stoneware, and 1 for china kiln for red pottery, for which there is an extensive local demand. 18 dwellings for the workmen, stabling for 14 horses, workshops &c. The rent over the Estate is many of the Landlords Property, and is low. Now in the occupation of Messrs. Pitkin and Co., who have given up this most desirable property.—Apply to Messrs. LEMAN & GROVES, 31, Lincoln's-inn-fields; Messrs. ROBINSON & CHIVE HAYCO & Co., Chesterfield-house-square; or Mr. A. B. FREND, Surveyor, 44, Bedford-row.

TO BUILDERS.—Several first-class FREEHOLD BUILDING SITES TO BE LET or SOLD at Hampton, Teddington, and Kingston. Each of them is situate within a few minutes' walk of the Railway Station, and within forty minutes' ride of the metropolis.—Plans may be seen, and further particulars obtained at the Offices of G. R. GREEN, Esq. Architect, 15, Bedford-row, W.C. Advances made to responsible builders on any of the above estates.

A STUDIO in the W. or N.W. Postal District is WANTED by a Sculptor.—Address, stating rent, &c. W. R. 19, St. Mark's-crescent, Clarendon-road, Notting hill.

BUSHY PARK ESTATE.—TO BE SOLD by Private Contract, about TEN ACRES of the BUILDING LAND, overlooking the park, and within five minutes' walk of Teddington Station. This property is situate immediately opposite several superior residences lately erected at Queen Ted lington. The soil is gravel, and the land is in all respects well adapted for the erection of genteel residences. A convenient portion of water and gas. Two thirds of the purchase money may remain on mortgage at 5 per cent.—Apply to Mr. CHARLES LAWS, Architect, No. 12, Doughty-street, W.C. and park-road, Teddington.

KEMPTON PARK ESTATE, HAMPTON.—TO BE SOLD by Private Contract, in one or more lots, 24 acres of superior BUILDING LAND, leading from the Hampton to the Kingston road, overlooking the picturesque park, and within a few minutes' walk of the railway station at Hampton, where a new open. The property is well adapted for superior residences. Two-thirds of the purchase money can remain on mortgage at 5 per cent.—Apply to Mr. C. LAWS, Architect, 12, Doughty-street; and Park-road, Teddington.

TO BRICK and TILE MAKERS.—TO BE SOLD by PRIVATE CONTRACT, a FIELD containing about 5 acres of excellent BRICK and TILE EARTH, from 6 feet to 20 feet in depth. Price, with clay leased for 21 years, 1,000. Soil partly manured.—Apply to Mr. T. G. BROWNING, Auctioneer and Appraiser, Whitstable, Kent, where sample bricks and tiles may be seen.

METROPOLITAN CATTLE-MARKET. Notice is hereby given, that the Markets Committee of the Corporation of London are prepared to receive PROPOSALS for the LEASE, for 21 years, of TWO HORSES or STALLS, known as the Quick Cattle and the Dray Cattle, at the Metropolitan Cattle-market, Copenhagen-fields, Islington. The letting together of the two will have the option of renting a piece of meadow-land adjoining.—Plans of the property may be seen, and further particulars obtained, upon application at the ARCHITECT'S OFFICE, Guildhall.

FERDINAND BLAND, Comptroller.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Stopping for Driving Bands, Lettings, &c., fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanency of their width and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in lengths of Forty Feet or Upwards, render them superior to leather for nine at all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Driving Bands, Pump Buckets, Fire buckets, Hoses, Union Joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

THE GUTTA PERCHA COMPANY, PATENTEES, WHARF ROAD, CITY ROAD LONDON

Architect—G. Somers Clarke, 20, George-street, S.W.

Secretary (pro tem.)—Henry J. Cowden.

Temporary Offices—62, Old Broad street, E.C.

PROSPECTUS.

This Company is formed for the purpose of effecting in the City of London a Public Auction Mart for the sale of private estates and other property, now absolutely necessary in consequence of the late Auction Mart recently situate in Bartholomew-close, City, having been converted to other purposes and the insufficient accommodation afforded to the public elsewhere.

The Directors have secured on favourable terms an extensive freehold area on Tokenhouse yard, next to the offices of the General Credit Company having a frontage of upwards of 100 feet. The site is admirably adapted by the requirements of the undertaking, not only from its central position, being close to the Bank of England, the Royal Exchange, the Stock Exchange, and the principal Banking Houses and Merchants connected with the Money Market, but from the great advantage it possesses in being free from the noise and confusion of a leading thoroughfare.

The Directors propose to erect on the site of the existing houses, a handsome and substantial building, retaining on the ground and first floors several large and suitable Show Rooms, with spacious Entrance Halls on the ground-floor on the east and Clerks' Rooms, which are to be approached by a separate entrance and staircase in the most convenient and economical manner, which can be used, as occasion may require, for auctionrooms, or for offices. The basement will contain suitable refreshment accommodation and additional cellarage or offices to be let or off.

It is proposed to keep a Classified Register of the prices of property sold at the Auction Mart, on the principle of the present Estate Exchange to which Shareholders will have access upon such a small fee, thus affording a useful reference for the purpose of valuations and otherwise.

The revenue of the Company will consist:—First, of rents to be received from the auctioneers for the use of the Sale Rooms, the amount for which is continual increasing. Secondly, fees to be received in respect of the Retreats at Deptford, and Dartford, and from the rents received for the Offices, Auctioneers' Rooms, Cellars, &c. from both sources the Directors confidently expect a most satisfactory income will be realized.

The Directors are desirous that the undertaking should be supported by the professional interest, and applications for shares from auctioneers both in London and the country will therefore receive special consideration.

The undertaking originates with the Directors. There will be no promotion money paid to any one either directly or indirectly, but the preliminary expenses will be confined to such as are actually necessary to be incurred.

The Articles of Association can be inspected at the Offices of the Solicitors to the Company.

The Shareholders will incur no liability beyond the amount of Shares registered in their name. Applications for shares must be made upon the annexed Form. Each applicant will be required to pay to the Bankers of the Company 1l. per share on the number of Shares applied for, and upon allotment to make a further payment of 4l. per Share on the Shares allotted to him. The remaining Calls will be made at such times and for such amounts as the requirements of the Company may demand.

If the amount so made the deposits will be returned in full.

Prospectuses and Forms of Application for Shares may be had of the Solicitors; or of the Secretary, at the Temporary Offices, 62, Old Broad-street, E.C.

The Owner; and see Specimen at the Museum of Practical Geology,
Jermyn street, W.
This stone (which is a perfect oolite) is raised in blocks of any
portable size, and is about 4 feet thick in the bed. It will stand
ANY WEATHER, is much used for water-works, and for the building
and restoration of churches. When used as ashlar work it is not
necessary to place it bed-wise. It works freely with a tooth-saw, and
is wrought at a cheaper rate than any stone in the kingdom.
The above WEATHER STONE is used
largely by London Builders.

J. TYLOR & SONS, MANUFACTURERS, WARWICK LANE, NEWGATE STREET, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

HOLBORN.—To Horse and Carriage Repository Proprietors, Railway Carriers, and Others.—Valuable premises.—The West Central Horse and Carriage Repository, occupying an area of 12,500 superficial feet.

PULLEN, HORNE, & EVERSFIELD are instructed by the Mortgagees to SELL by AUCTION, at OAR RAWES', on THURSDAY, DECEMBER 15th, at TWELVE, the very valuable Leasehold newly-built PREMISES, lately occupied as the West Central Horse and Carriage Repository, commandingly situate in the wide and best part of High Holborn, near Red Lion street, occupying an important area of 12,500 feet, and adapted for any business requiring prominent position and space. The premises comprise a noble ride or trotting court, 100 feet by 35 feet, covered with an expensive ornamental iron and glass roof, capital stalled stabling for 65 horses, fitted with enamelled iron mangers and racks, and all modern appliances, show-rooms and galleries for carriages, harness rooms, counting houses, &c. There are thirteen sets of dwellings, of two rooms each, for servants and those engaged in the establishment; also three dwelling houses for foreman and manager. The principal front, in Holborn, presents a handsome and appropriate elevation with iron entrance gates; and there are also two other distinct entrances from Holborn, affording unusual facilities of ingress and egress. The property is held for a term of 60 years, at a ground-rent.—May be viewed, and particulars had of Messrs. NEWMAN, EVANS, & CO. Solicitors, 26, Nicholas-lane; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

ROTHERHITHE.—The Valuable Stock of Timber, Barges, and Effects of a Barge Builder.

PULLEN, HORNE, & EVERSFIELD are instructed by Messrs. R. & E. Talbot, who are dissolving partnership, to SELL by AUCTION, on the PREMISES, Church-passage, Redriff, on TUESDAY, DECEMBER 13, at TWELVE for ONE precisely, a NEW OPEN BARGE of 65 tons, a canal barge of 72 tons, seven river barges, varying from 25 to 56 tons, a lug, 2 ship's boats, skiff, and punt; also the very valuable stock of seasoned timber comprising several thousand feet of oak plank of various thicknesses, 45 inch oak planks, 80 barge heads, 200 floor timbers, 40 crutches, 3 pair of oak combings, stern-posts, windlasses, tillers, rowing cheeks, &c.; 3,000 feet of 1-inch, 2-inch, and 3-inch elm boards, and 4-inch, 3-inch, and 2½ inch Dantzic deals, about 4 tons of bar and round iron, fittings of blacksmith's shop, erection of the same as now in building crane, iron pumps, anchors and chains, office stove, and the usual effects.—May be viewed on Monday, and on the Premises; also of Messrs. J. & W. BUTLER, Solicitors, 191, Tooley-street, S.E.; at the Coal Exchange; and of PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, S.W. and 80, Fore-street, E.C.

Government Stores, Westminster

PULLEN, HORNE, & EVERSFIELD are instructed by the Commissioners of Her Majesty's Works and Public Buildings, to SELL by AUCTION, at the STORE YARD, Great Smith-street, Westminster, on FRIDAY, DECEMBER 16, at TEN for ELEVEN, a quantity of OLD STORES, comprising mahogany and walnut tables, desks and presses, oak chests and boxes, Turkey, Brussels, and felt carpets, mats, &c. iron and cast iron, old bolts, locks, feet, &c. 4 chairs, curtains, brooms, tinware, pewter, wrought and cast iron, and other effects. May be viewed one day prior to and catalogues had at the Office of Her Majesty's Works, &c., 12, White-hall-place; and of PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, Westminster, and 80, Fore-street, City.

EAST SMITHFIELD.—The valuable Building Materials of Downes' Wharf—Two Fifty Lighters, Trade Fixtures and Wharf Utensils, and Public House property.

PULLEN, HORNE, & EVERSFIELD are instructed to SELL by AUCTION, on the PREMISES, No. 65, Lower East Smithfield, on FRIDAY, DECEMBER 30, at TWELVE, the MATERIALS and FITTINGS UP of an extensive Range of Warehouses and Offices known as Downes' Wharf, and the St. Andrew Public House adjoining, comprising 240 feet of York, Memel, and Dantzic timber, 3,000 feet of Memel and Dantzic deals and battens, 2,000 feet of Riga and Petersburgh fir, 1,000 feet of Memel and Dantzic planks, 1,000 feet of oak timber, 1,000 feet of Memel and Dantzic boards, 1,000 feet of Memel and Dantzic flooring boards, 1,000 feet of Memel and Dantzic scantling, 1,000 feet of Memel and Dantzic battens, 1,000 feet of Memel and Dantzic quartering, 1,000 feet of Memel and Dantzic lining boards, 1,000 feet of Memel and Dantzic match boarding, 1,000 feet of Memel and Dantzic ceiling, 1,000 feet of Memel and Dantzic pitch pine, 1,000 feet of Memel and Dantzic fir, 1,000 feet of Memel and Dantzic mahogany, 1,000 feet of Memel and Dantzic walnut, 1,000 feet of Memel and Dantzic cedar, 1,000 feet of Memel and Dantzic oak, 1,000 feet of Memel and Dantzic ash, 1,000 feet of Memel and Dantzic elm, 1,000 feet of Memel and Dantzic beech, 1,000 feet of Memel and Dantzic birch, 1,000 feet of Memel and Dantzic sycamore, 1,000 feet of Memel and Dantzic lime, 1,000 feet of Memel and Dantzic chestnut, 1,000 feet of Memel and Dantzic poplar, 1,000 feet of Memel and Dantzic alder, 1,000 feet of Memel and Dantzic willow, 1,000 feet of Memel and Dantzic hornbeam, 1,000 feet of Memel and Dantzic maple

NOTICE.
BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72–74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c. to meet the great public demand; and also for the consequent more extensive execution of all descriptions of hot water, bath, lain dry, and steam work.
72–74, Bishopsgate-street Within.

BY Order of the Secretary of State for India in Council.—NOTICE is hereby given, that TWENTY-FIVE APPOINTMENTS in the Upper Class of the ELECTRIC TELEGRAPH DEPARTMENT in INDIA will, in the year 1865, be open to PUBLIC COMPETITION.

A COMPETITIVE EXAMINATION will, accordingly, be held in this Office in the month of MAY next.—Full printed particulars of the conditions on which candidates will be admitted to the examination, and also respecting the nature of the appointments to be competed for, may be obtained at this Office, on application, either personally or by letter, addressed to the "Under Secretary of State for India," India Office, London, S.W.

India Office, 1st July, 1864.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings.—For prices, apply to the Manager, Mr TYLER, 12, Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

LENOIR'S PATENT GAS-POWER ENGINE.
PRIZE MEDAL, INTERNATIONAL EXHIBITION, 1862.
The Company are now Publicly Exhibiting this motive power, daily, between the hours of 11 and 1 and 3 and 5.
C. W. WOOD, Manager and Secretary (pro tem.)
No. 40, Cranbourne-street, Leicester-square.

COMPETITIONS.

TO ARCHITECTS.—The Guardians of the Leicester Union are desirous of obtaining DESIGNS, with Specifications and estimated Cost, for proposed SCHOOLS and WORK-ROOMS, at the Workhouse.—Further particulars, together with plans and sections of the site of the proposed buildings may be obtained on application to their Clerk, Mr. B. G. CHAMBERLAIN, New-street, Leicester.

FULFORD, YORK.—The Church Building Committee desire to tender their sincere thanks to the fifty-five Architects who have competed for the new Church, and to say that the designs have been returned. They will feel obliged to "Labour is worship," and to "Messrs. Lamb & Wyon," to send their full address.

BURNLEY MARKET COMPANY, LIMITED.—The Directors are prepared to receive DESIGNS for the LAYING OUT of their MARKET PREMISES, and for the ERECTION of a NEW MARKET HALL, at Burnley. A premium of 30l. will be awarded for the best Design, and one of 20l. for the second best Design, to be delivered not later than 1st of FEBRUARY, 1865. Plans, with printed instructions, may be had on and after the 9th instant, on application to Messrs. PICKARD & STOCKS, Accountants and Auditors 12, Hargreaves-street, Burnley; or at their Offices Square-road, Halifax.

CONTRACTS.

WAR DEPARTMENT CONTRACTS.—NOTICE to BUILDERS
TENDERS are required for the ERECTION of a new BLOCK of BUILDINGS, at the Military Hospital, at Stoke, near Devonport.

Parties desiring to Tender for the said erection of those Works must leave their names at this Office, on or before the 24th day of DECEMBER, instant, and lay the sum of five shillings for the bills of quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The secretary of State does not bind himself to accept the lowest or any of the Tenders.

HENRY CUNLIFFE OWEN.
Colonel Commanding Royal Engineer, Western District.

Royal Engineer Office, Devonport, 10th December, 1864.

THE KEIGHLEY and WORTH VALLEY RAILWAY COMPANY.—CONTRACTS for SUPPLY of PERMANENT WAY MATERIALS. The Directors of the Keighley and Worth Valley Railway Company are prepared to receive TENDERS for the SUPPLY of RAILS, CHAIRS, SLEEPERS, KEY, FISH-PLATES, BOLTS, SPIKES, &c. required in the construction of the above Railway. Specification and form of Tender may be obtained upon application to J. M'LANDSBOROUGH, Esq. Civil Engineer, 23 and 24, Queensgate, Bradford. Sealed Tenders must be delivered to the undersigned on or before MONDAY, the 19th DECEMBER next. The Directors do not bind themselves to accept the lowest or any Tender. By order of the Directors,

JONATHAN GILL, Secretary.

Oakworth, Keighley, 21st November, 1864.

TO BUILDERS, MILLWRIGHTS, and OTHERS.—STAFFORD COUNTY PRISON.—Persons disposed to TENDER for the ERECTION of TREAD WHEELS, COKE MILL, and KITCHEN at the above named building may inspect the plans, specification, and quantities, and obtain blank forms of tenders, at the Office named after TUESDAY, the 13th instant, and THURSDAY, the 22nd of DECEMBER. A deposit of 1l. will be required for each set of quantities, which will be returned to all parties who tender for the works. Tenders must be delivered at my Office by TEN o'clock a.m. on THURSDAY, the 29th DECEMBER, but neither the lowest nor any Tender will necessarily be accepted.

ROBERT GRIFFITHS, Architect and County Surveyor.
County Surveyor's Office, Eastgate-street, Stafford,
December 1st, 1864.

TO BUILDERS, &c. Parties desirous of CONTRACTING for the ADDITIONS and ALTERATIONS to the PAVILION of the Marylebone Cricket Club, are requested to communicate, by letter only, with the Architect, Mr. HARRY B NEWTON, 6, Argyll-street, Regent-street, W.

CONTRACTS.

FULHAM BURIAL BOARD.—The Board hereby give notice that they will be ready, at a meeting to be held at the National School-rooms, Walham-green, in the county of Middlesex, on WEDNESDAY, the 4th day of JANUARY, 1865, at SIX o'clock in the evening precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for BUILDING a CHAPEL for the performance of the Burial Service according to the rites of the United Church of England and Ireland, on the ground purchased by the Board as a burial ground, situate on the north side of the road leading from the entrance of Fulham to Hammersmith, and containing 5a. 2r. 22p. according to the plan approved by the Bishop; Building a Chapel for the performance of Burial Service on such part of the ground so purchased which is not consecrated, for persons not being members of the Established Church, and also Building a Lodge at the Entrance of the said Ground; and also Walls and Fences round the said Ground. Plans, specifications, and detailed drawings of the works can be seen, and bills of quantities, prepared by a competent surveyor, and other particulars obtained, with the form of Tender, on personal application at the Offices of As. W. BLOMFIELD, Esq., Architect, No. 8, Adelphi-terrace, Strand, London, on MONDAY, the 26th day of DECEMBER, 1864, and the succeeding days (previously to the 4th day of JANUARY, 1865, between the hours of TEN and FOUR o'clock. The sealed Tenders to be addressed to the Chairman of the Board, at the said School-rooms, Walham-green, on or before SIX o'clock in the Evening of the said 4th day of JANUARY, 1865; and the party whose Tender may be accepted will be required to enter into a contract and bond with two sufficient sureties for the due performance of the undertaking, such contract and bond to be prepared by the Solicitor to the Board. The Board does not pledge itself to accept the lowest or any Tender.

FULHAM BURIAL BOARD.—The Board hereby give notice that they will be ready, at a meeting to be held at the National School-rooms, Walham-green, in the County of Middlesex, on WEDNESDAY, the fourth day of JANUARY, 1865, at SIX o'clock in the Evening precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for DRAINING and LAYING OUT the GROUND purchased by the Board as a BURIAL GROUND, situate on the north side of the road leading from the entrance of Fulham Town to Hammersmith, and containing 5a. 2r. 22p. A plan of the Ground and a specification of the Work to be done can be seen, and other particulars obtained, with the Form of Tender, on personal application at the Offices of A. W. BLOMFIELD, Esq. the Architect, 8, Adelphi-terrace, Strand, London, on MONDAY, the 26th day of DECEMBER, 1864, and the succeeding days previously to the 4th day of JANUARY, 1865, between the hours of TEN and FOUR o'clock. The sealed Tenders to be addressed to the Chairman of the Board, at the said School-rooms, Walham-green, on or before SIX o'clock of the said 4th day of JANUARY, 1865; and the party whose Tender may be accepted will be required to enter into a contract and bond with two sufficient sureties, for the due performance of the undertaking, such contract and bond to be prepared by the Solicitor to the Board. The Board does not pledge itself to accept the lowest or any Tender.

FULHAM BURIAL BOARD.—The Board hereby give notice that they will be ready, at a meeting to be held at the National School-rooms, Walham-green, in the county of Middlesex, on WEDNESDAY, the 4th day of JANUARY, 1865, at SIX o'clock in the Evening precisely, to receive sealed TENDERS from parties who may be willing to contract for PROVIDING, FIXING, and PAINTING the IRON RAILINGS and GATES on and within the Wall and Fences round the ground purchased by the Board as a Burial Ground, situate on the north side of the road leading from the entrance of Fulham to Hammersmith, containing 5a. 2r. 22p. A plan of the ground and a specification of the work to be done can be seen and obtained, with the Form of Tender and other particulars, on personal application at the Offices of A. W. The Board does not pledge itself to accept the lowest or any Tender.

TO BUILDERS and CONTRACTORS.
The Burton-upon-Trent Improvement Commissioners, as the Burial Board for their District, are prepared to receive TENDERS for FORMING the ROADS and DRAINS, Laying out the Ground and Fencing round for the Erection of Two Chapels, Lodge, Entrance, Boundary Wall, &c. at the proposed new Cemetery, Scalp Cliff Hill, near Burton upon Trent. The plans, specification, and copies of quantities can be seen at the Gas Inspectors' Office, High street, Burton; or at the Offices of the Architects, Messrs. LUCY & LITTLER, 9, James street, Liverpool. Tenders, endorsed "Tender for Cemetery Works," addressed to the Chairman, Burton Improvement Commissioners, are to be sent in on or before the 3rd day of JANUARY, 1865. The Board do not bind themselves to accept the lowest or any Tender, and the contractor will be required to find sureties for the due fulfilment of the contract.—By order,

WM. COXON Clerk.

Burton, December 12, 1864.

TENDERS for the ERECTION of a large SCHOOL ROOM, with DWELLING HOUSE attached, in Love-lane, Shadwell, E. are required to be sent in to Mr. ROBERT WEBSTER, 2, Bromley-street, Commercial-road, on or before the 31st of JANUARY, 1865. Plans of the work, and all other particulars obtained, and the Form of Tender had from Lovegrove, Shadwell, between the hours of TEN a.m. and FIVE p.m.

ROBT. WEBSTER, Hon. Sec.

TO BUILDERS AND OTHERS.—TENDERS are required for TAKING DOWN and CLEARING AWAY a MANSION HOUSE, called Southcliffe, near Shanklin, Isle of Wight.—Application for particulars to be made at my Office, as undermentioned after the 19th instant.—Tenders to be delivered to me on MONDAY, JANUARY 2, 1865, by SIX o'clock p.m.

EDWARD BROWNING, Architect, Stamford.

December 15, 1864.

[For remainder of Contracts see next Page.

SAINT SAVIOUR'S UNION.—To BUILDERS.—The Guardians of this Union desire to receive TENDERS for the ELECTION of a VAGRANT WARD in the Stone Yard of the Union situate in Marlborough street, Blackfriars road, in the county of Surrey.—Plans and specifications of the Works required may be seen at the Office of Mr HENRY JARVIS, Surveyor, No. 29, Trinity square, Southwark; and sealed Tenders must be sent to him, Office, on or before WEDNESDAY, the 21st day of DECEMBER instant, and the Guardians will meet here on THURSDAY, the 22nd DECEMBER instant, at THREE o'clock punctually, to open the same, when persons Tendering are required to attend.—The Guardians do not bind themselves to accept the lowest or any Tender. Dated the 8th day of December, 1864.

JAMES J. BLAKE, Clerk to the Guardians.

John-street West, Blackfriars road, S

TO BUILDERS. The Chairman and Guardians of the Parish of St George the Martyr, Southwark, are prepared to receive TENDERS for the ERECTION of NEW VAGRANTS' WARDS. The works are to be executed under the superintendence of Mr T. F. FRANKLIN, of No. 5, Adelaide place, London Bridge, E.C. Quantities may be obtained from Mr. J. T. CHRISTOPHER, of No 11 Dean street, Soho, W.C. upon the payment of 2l. 2s. which amount will be returned to all bona fide tenderers delivering Persons invited Tenders not approved of by the Architect or the Surveyor, will not be TWELVE o'clock on MONDAY, DECEMBER 19. The Guardians will meet to open Tenders at FIVE o'clock on WEDNESDAY, 21 DECEMBER 21. They do not bind themselves to accept the lowest or any tender.

TO BUILDERS.—The Trustees of Judge Fellows Hospital, Shipbuilding, are willing to receive TENDERS for the ERECTION of a new HOSPITAL or ALMSHOUSE at Harrow-green, Leytonstone, Essex. The plans &c may be seen at Mr. JAMES TOLLEY's, the Architect's, Office, 14, Angel court, Throgmorton-street, E.C. on the morning of Wednesday, when the Trustees will meet at One o'clock to be present. Builders who deliver Tenders at the Vestry room, Stratford Church, on WEDNESDAY, the 4th of JANUARY next, at One o'clock. Tenders to be upon printed forms prepared for the Trustees. The Contractor will, if required, give security for the due performance of the Contract in the sum of two sureties each with handsome and responsible property in the sum of 400l. The Trustees do not bind themselves to accept the lowest or any Tender. By order.

SOMERSET J. HYAM, Clerk to the Trustees.

164, Church street, Spitalfields, 14th December, 1864

CORPORATION of MANCHESTER.—To BUILDERS.—The Cemetery Sites Sub-Committee are prepared to receive TENDERS for the ERECTION of the requisite BUILDINGS at the new Cemetery, near Manchester, consisting of three separate chapels, offices, and house for the registrar, two lodges, and two entrance Drawings and specification, and quantities of contract, may be seen at the Offices of the Architects, Messrs PAULL & ALLEN, Bowling Lodge, Cross-street, Manchester Quantities will be furnished, and may be obtained of the Architects, upon deposit of 2l. for each set, the said deposit to be returned to all bonâ fide Builders from whom bona fide Tenders are received Sealed Tenders, endorsed "Tender for Cemetery Buildings," and addressed to the committee, to be delivered at the office of the Architects, not later than TEN o'clock a.m. on MONDAY, the 16th of JANUARY, 1865. The Tenders may be for the whole of the works, or for the masonry, &c. separately.—By order.

JOSEPH HERON, Town Clerk.

Town-hall, Manchester, 9th December, 1864.

N.B. Early application for lists of quantities should be made by letter, to the Architects, that the requisite number of copies may be ordered

TO MILLWRIGHTS and ENGINEERS.—CONTRACT for TREADWHEELS.—The Visiting Justices of the House of Correction, at Coldbath Fields, will meet at that Prison on FRIDAY, the 30th day of DECEMBER instant, at ONE o'clock, to receive TENDERS for the CONSTRUCTION, FITTING, and FIXING of NEW TREADWHEELS at the said Prison. The brick, stone, and timber work on which the Machinery is to be fixed will be provided by the Visiting Justices. The plans and specification can be seen, on application at the Prison on any week day but Friday, between the hours of ELEVEN and THREE. The Tenders to be sent in addressed to the Visiting Justices at the Prison by TWELVE o'clock on FRIDAY, the 30th instant, and the parties Tendering to be in attendance at ONE on that day, prepared with the names of two responsible sureties for the due performance of the Contract if the Tender be accepted. The Contract will be prepared at the expense of the Visiting Justices. The Visiting Justices do not bind themselves to accept the lowest or any of the Tenders. JOHN S. SKAIFE,

10th December, 1864. Clerk to the Visiting Justices.

TO STONE MERCHANTS, CONTRACTORS, and OTHERS.—The Vestry of the Hamlet of Mile and Old Town will meet at the Vestry Hall, Bancroft-road, Mile-end-road, on WEDNESDAY, the 21st day of DECEMBER instant, at SEVEN p.m. precisely to receive TENDERS for the SUPPLY of 1,000 YARDS of BROKEN GRANITE RAG STONE, to be delivered pursuant to the terms of a specification, which may be seen at the Office of Mr. JAMES KNIGHT, the surveyor, at the Vestry hall, between the hours of TEN and ONE. The contractor will be required to enter into a contract at his own expense, to be prepared by the Clerk of the Vestry, at a cost not to exceed 6l. and find two sureties in half the amount of the contract, for the due performance thereof. The Tenders, containing the names and addresses of proposed sureties, endorsed "Tender for Rag Stone," are to be sent in to my Office before THREE o'clock in the afternoon of the day of the meeting. The Vestry do not bind themselves to accept the lowest or any Tender. THOMAS PRICE, Clerk to the Vestry.

Vestry-hall, Bancroft-road, Mile-end-road E. Dec. 6, 1864.

CROYDON LOCAL BOARD of HEALTH. CONTRACT for SEWER TRENCHES.—Notice is hereby given, that the Croydon Local Board of Health are prepared to receive TENDERS from persons desirous of CONTRACTING with them for the EXCAVATION and RE-FILLING of 7,000 lineal yards of TRENCHES for SEWERS, in accordance with the specification prepared by Mr. BALDWIN LATHAM, C.E. their Engineer. The specification may be seen at the Engineer's Office, in the Town Hall, Croydon, on or after this date. Sealed Tenders, endorsed "Tender for Sewer Trenches," are to be delivered at the Offices of the Local Board, in the Town Hall, Croydon, on or before FOUR o'clock in the afternoon of TUESDAY, the 3rd day of JANUARY, 1865. The Local Board do not bind themselves to accept the lowest or any Tender.

HENRY RICHARDS, Clerk to the Board.

Town Hall, Croydon, December 14, 1864.

TO CONTRACTORS.—RHYL PROMENADE PIER COMPANY (LIMITED).—The Directors are desirous of receiving TENDERS for the ERECTION of an IRON PIER into the Sea at Rhyl, 1,050 yards long.—Plans and specifications may be seen upon application to Mr. W. WYNNE, the Secretary, Belvoir Hotel, Rhyl. The contractor will be required to take a portion of the amount of the contract in paid up shares of the Company. The Directors do not bind themselves to accept the lowest or any other Tender.

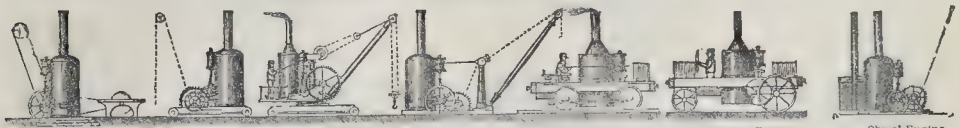
MATTHEW T. SHAW, 64, CANNON STREET, LONDON BRIDGE, E.C.

Orders requiring Despatch and Punctuality can be executed in a few days.



VENTILATION.—OVERCROWDING.—Boyle's System of Natural Ventilation ensures a *more* healthy condition of atmosphere in overcrowded than is usually present in thinly-inhabited or empty places. The heat arising from the state of overcrowding is the motive power which works this system with infallible regularity and effect. The smaller, closer, hotter, and more overcrowded a place is, the easier and better can it be ventilated on this system. It is applicable to all places alike, Cottages, Mansions, Public Halls and Buildings, Churches, Hospitals, Factories, Work-rooms, Stables, Cow-houses, Conservatories, and even Mines and Ships. Let no one form a hasty conclusion from the seeming extravagance of this statement. It is a far wiser plan to examine first and conclude afterwards.

"*In one instance under our own eye Mr. Boyle has operated very successfully.*"—Article, "Air in the Corners," *Builder*, 15th October, 1864.

THOS. BOYLE, No. 23, Little St. Andrew-street, Upper St. Martin's-lane, London. Agents, Messrs. COMYN, CHING, & CO., at same address.

WROUGHT IRON WINE BINS.

FARROW & JACKSON

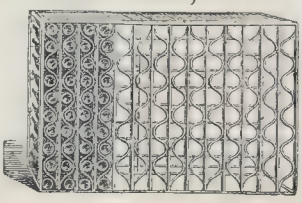
Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR



NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with

SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents of the Bin.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

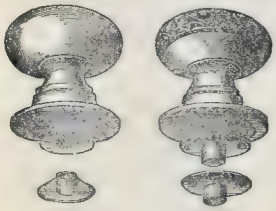
A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

BURT & POTTS,

WHOLESALE AND MANUFACTURING IRONMONGERS,

38 and 65, York-street, Westminster.



SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

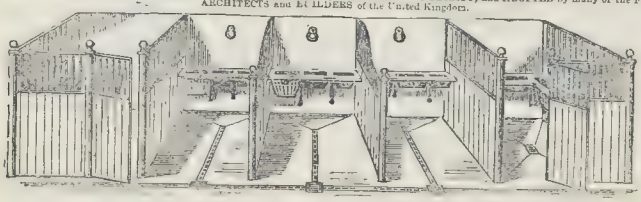
NUT PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.



*** Illustrations and Particulars sent on application.

WAREHOUSES FOR NAILS, PIPES, GUTTERS, &c. IN ST. JOHN'S COURT.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS.

These SUPERIOR CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

J. BARTON, having entered upon the extensive Premises, No. 370, Oxford-street, adjoining his Patent Stable Fitting Manufactory, begs to solicit attention to his large and well-selected STOCK of STALL and LOOSE BOX FITTINGS, HARNESS ROOM REQUISITES, &c.; also to invite inspection of the new prizes, Practical Stable, now on view. Illustrated Catalogues on receipt of Four Stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

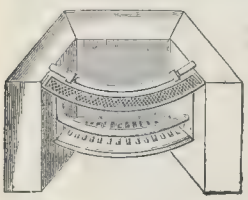
EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.



They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming large apartments for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

FIRE-LUMP GRATES,

FOR BED-ROOMS, COTTAGES, SERVANTS' OFFICES, BARRACKS, SCHOOLROOMS, WAREHOUSES, CHARITABLE INSTITUTIONS, &c.

With hanging trivet.

EDWARDS & SON,

STOVE, GRATE & KITCHEN RANGE MANUFACTURERS,

No. 19, GREAT MARLBOROUGH STREET, REGENT STREET, LONDON.

THE ONLY PRIZE MEDAL GIVEN for (SEE JURORS' AWARD, POWIS, JAMES, & CO. VICTORIA WORKS, CHIEF OFFICES,—

First-Class MACHINERY for WORKING WOOD INTERNATIONAL EXHIBITION, 1862), to BLACKFRIARS ROAD, LONDON. 26, WATLING STREET, CITY, E.C.

POWIS, JAMES, & CO.

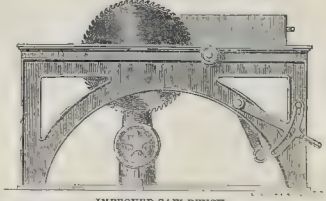
Invite all who are thinking of putting down a MOULDING or FLOOR BOARD PLANING MACHINE TO SEE THEIR NEW PATENT FOUR CUTTER MACHINE.

POWIS, JAMES, & CO. also call the attention of RAILWAY CONTRACTORS and others to their NEW PATENT SLEEPER BORING-MACHINE, suited for any gauge, and to bore either vertically or at any angle.

POWIS, JAMES, & CO. also invite BUILDERS and JOINERS to see their IMPROVED PATENT SELF-FEEDING HAND-POWER COMBINED MACHINE for MORTISING, TENON-CUTTING, and BORING: a great saving of manual labour, ONE MAN doing the work of EIGHT.

POWIS, JAMES, & CO. also call attention to their PATENTED UNIVERSAL WHEEL MAKING MACHINE, for Sawing, Boring, Turning, &c. Wheel-stocks, and doing Four spokes at one time.

POWIS, JAMES, & CO. also invite inspection of their NEW CIRCULAR-SAW-BENCH, for SAWING, RABBETING, GROOVING, and PLANING, or THICKNESSING BOARDS.



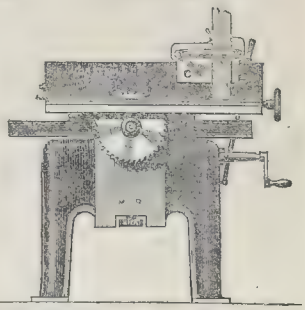
PRIZE MEDAL, LONDON, 1862.

THOMAS ROBINSON & SON,

SAW-MILL ENGINEERS,

ROCHDALE, NEAR MANCHESTER.

London Office, 9, Adam-street, Adelphi, W.C.



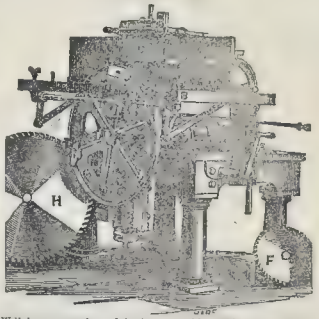
IMPROVED SAW-BENCH,

for Sawing, Tonguing, Grooving, Rebating, Boring, and Cross-cutting. Manufacturers of Sawing, Planing, Moulding, and Wood working Machinery of every description, suitable for Builders, Contractors, &c Steam Engines and Boilers, Shafting, Gearing, &c.

Full sets of Wood-working Machinery to be seen in operation daily at the Works, Rochdale.

THE GENERAL JOINER,

by S. WORSSAM & CO.



The GENERAL JOINER is adapted for Sawing, Planing and Thicknessing, Mortising, Tenoning, Cross cutting and Squaring up, Grooving, Tonguing, Moulding, Chamfering, Beading, Boring, and a great variety of other purposes.

The General Joiner having lately been greatly improved, and several new appliances added to it, S. W. & Co. have published a new Illustrated Circular of this most useful "about-everything" machine, which can be had free on application at their Works, 304, King's-road, Chelsea, S.W.

SKETCHLEY & CO.'S

"UNIVERSAL JOINER."

Will do more work, and is cheaper and better than any other yet produced.—Full particulars on a placard to WM. SKETCHLEY, GREAT GEORGE STREET, WEYMOUTH; or JNO. WALDRAM, 4, GODFREY'S ROW, SHACKLEWELL GREEN, KINGSLAND, N.E.

SMOKY CHIMNEYS,

S. DEACON

Respectfully invites the attention of Architects Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many smoky chimneys where other caps have been of no avail.

The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage stamp, by

S. DEACON,

59, ALMA STREET, HOXTON, N.

MANUFACTORY:

HEMSWORTH STREET, SAINT JOHN'S ROAD, HOXTON, LONDON, N.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions, China, Glass, and Wood Furniture, of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilators, &c.; and the New Registered Venetian Ventilator, so much admired, 6s. 6d. each.

J. H. BOOBBYER (late STURCH & BOOBBYER), established nearly 200 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.

14, Stanhope-street, Newcastle-street, Strand, London, W.C.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.
Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.
Good Zinc badly Laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.
The Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the

Losses paid 2,000,000*l.*

FIRE INSURANCES granted on every description of property, at home and abroad, at moderate rates.
Claims liberally and promptly settled.
Insurances on Stock, Machinery, Utensils, and Fixtures in Trade, effected at a reduction of One-half the Duty formerly charged.
ANDREW BADEN, Superintendent.

VENTILATION—PURE AIR.

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta Percha Strapping for Driving-bands, Lattestrops, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Hoses, Union Joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA-PERCHA COMPANY, PATENTEES,
WHARF ROAD, CITY ROAD, LONDON

POLONCEAU and SEYSSEL ASPHALTE.

ESTABLISHED 1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for making Basement Floors, the absence of joints preventing the generation of Rats, &c. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill, London, E.C.
Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

CLOTHS and BAIZES.—A large assorted STOCK of the above always on hand, in all widths, colours, and qualities, at
HILL & SON'S,
Nos. 88 and 89, ST. MARTIN'S LANE, CHARING CROSS.

The Builder.

VOL. XXII.—No. 1141.

An Action for Libel.

IN May last we received a letter from an architect describing the evil condition of a fishmonger's yard into which the window of his office opened. Knowing the writer and considering it to be a duty to endeavour to remedy the state of things therein described, the letter, after much consideration, was inserted. No name was mentioned, the locality was merely hinted at, and we did not ourselves know to what premises the letter referred. The occupier of a supper-house and shell-fish shop, however, in the neighbourhood indicated brought an action for damages against the publisher of this journal, and the cause was tried at Westminster, last week.

The plaintiff, being examined, denied the correctness of the statements published, and said his business had fallen off in the month following the publication to the extent of 54*l*. A boy in his employ gave similar evidence so far as related to the state of the yard. The local inspector of nuisances said he had never seen anything in the yard more than would be there in the usual course of business. In 1862, he continued, there had been a complaint, and the plaintiff was summoned to Bow-street in reference to his copper, when it was arranged that there should be a hood to it. There had also been a complaint since. The medical officer of health said that, since the summons at Bow-street, he had received complaints of the yard from Craig's-court, and he had visited the place on those occasions. Except the effluvia from the shellfish, he never experienced anything that would warrant him in giving notice to the vestry of a nuisance to be removed. On the part of the defendant, the architect who wrote the letter swore distinctly and positively to the truth of every word of it. He had complained at the vestry-house of the nuisance. He had been unable to open his window for the smell, and had suffered great inconvenience from the state of the yard. Another architect, who had occupied part of the same house, his assistant, a fourth gentleman who had formerly lived in the house, his clerk, and the housekeeper, confirmed various portions of the first witness's testimony.

The editor of the paper deposed that it had long been devoted to the furtherance of sanitary improvement, and that the letter, vouched for by a known correspondent, was inserted simply on public grounds.

The Judge (Chief Justice Erle) told the jury that unless they were of opinion that the defendant had proved the truth of all the statements in the letter, they must find a verdict for the plaintiff. He further, after bearing testimony to the excellent character of the paper, laid down the extraordinary doctrine that the conductor of a "powerful organ" such as that was, should not permit the insertion of any statement reflecting on the conduct of a fellow-man. Thus a statesman might sell his country, a general betray her armies, or a judge her liberties; but the conductors of powerful organs were to admit no word of warning or exposure. There may have been qualifying terms in the Chief Justice's address, though we did not hear them; but the impression left on his hearers was what we have stated; and the jury, after a brief retirement, returned with a verdict for the plaintiff, damages 50*l*.

In the interest of social improvement and the public health, and in the interest of the press as a public safeguard, we feel it to be a duty to record here thus briefly the facts of the trial, leaving our readers to draw their own inferences. They will ask themselves which set of witnesses had the least reason for disingenuousness, and they will doubtless reflect on what the doctrine of the Chief Justice would lead to if it could be enforced.

The counsel for the plaintiff, whose general knowledge, by the way, seemed to be like a joint-stock company he alluded to, "limited," pretended to be very indignant that "this Mr. Editor" should seek to expose sanitary defects and dangers, and obtain improvements, when there were an Act of Parliament and local boards of health purposely to regulate such matters. We take the liberty of telling "this Mr." Barrister, that when the very Act of Parliament to which he referred was brought as a bill into the House of Commons, the Government showed the necessity of passing it by reference to the investigations made and the statements as to the sanitary condition of the people published by this very journal. Moreover, that the advantages resulting, spite of the obstructions offered by the ignorant, the prejudiced, and the interested, from the efforts made in these pages with that end in view, have been thankfully recognized from time to time all over the kingdom.

With strong conviction of the enormous importance of the subject, and abundant evidence that our well-meant endeavours have not been without avail, we are not likely to be deterred from pursuing the course in which we have now for many years, and with some personal sacrifice, laboured earnestly, however humbly. We are not the first who have been made to suffer for disinterested efforts in the service of the public.

CONDITION OF OUR TOWNS: STIRLING.

THE ancient and royal burgh of Stirling is situate at the apex of an irregular triangle, of which a line drawn from Edinburgh to Glasgow would form the base. It is distant from Edinburgh about 36 miles, on the north-east; from Glasgow, about 30 miles, on the north-west; and it lies in the very centre, and possesses the most commanding aspect of the picturesque valley of the river Forth. Stirling very much resembles Edinburgh on a small scale—the most striking resemblance consisting in the old, grey, weather-beaten castle, which is perched on the summit of a precipitous rock or "crag," and in the peculiar declivity which the town receives as it retreats from the castle to the level of the river. These "crags," or "craigs," as they are called in Scotland, occur very frequently in the district, and appear to be destined by nature for the sites of those numerous hill fortifications which, previous to the invention of gunpowder, were considered impregnable. Having long survived their usefulness for this warlike purpose, the utilizing genius of the Scotch people in our day runs strongly in the direction of converting them into cemeteries and sites for monuments.*

Nearly all the historical interest of Stirling is concentrated in its castle. It is highly probable that the elevation on which it stands was made the seat of a military station under Agricola. It also seems to have been a fort, the possession of which was eagerly disputed by the celebrated factions of the Peghts and Scots. But it was not until the reign of Malcolm Canmore (A.D. 1057) that it assumed the character of a regular fortress. During the long and destructive wars of Edward I., a principal object of the contending parties was to hold possession of this important position; for, in a strategetical sense it was possessed of great value. It was the key of all the country which lies north of the river Forth; it was the most accessible point for crossing that river; and no invader, with a due regard to his own safety, could leave it behind him in the possession of a hostile garrison. It is hardly necessary to mention that, from these reasons, it constituted the *immediate* cause of the celebrated battle of Bannockburn, which was fought on the rising grounds in the neighbourhood.

Stirling, in course of time, became a favourite residence of the Scotch kings. James II. was born here in 1430; and here, in 1452, he murdered, under a promise of safe conduct, the great Earl of Douglas. James III. made Stirling Castle his chief residence. James IV. frequently dwelt here; it was the birth-place of James V.; here, too, Mary, the hapless Queen of Scots, was crowned, while yet an infant of nine months old; and here her son, James VI. of Scotland and I. of England, spent his boyhood, under the tuition of George Buchanan—a pedagogue who carefully instructed his pupil in the doctrines of king-craft, but forgot, as it should seem, to enlighten him concerning the far nobler duties of filial affection. One curious anecdote of this monarch, we think, is worth relating. From the French battery in the castle (so called from having been constructed by the soldiers of Queen Mary of Guise), we overlook a series of small picturesque elevations, extending from the Castle-rock to the old bridge of Stirling. One of these hillocks is called the *Mote-hill* (the former golgotha, or place of execution, for state criminals in Scotland). This *Mote*-hill is still popularly known by the name of "Hurly-Hawkie" (Scottice "Ride-cow"), from a juvenile pastime of James VI., who used to amuse himself by sliding down its steep slope on the skeleton of a cow's head!

Most of these sovereigns contributed to the enlargement and adornment of the castle; and many of their works still remain to attest their magnificence, although a good deal injured by the hand of time, the events of war, the consequences of neglect, alteration, and accidental fire. During Cromwell's invasion it was bombarded and taken by General Monk; and the national registers, which had been deposited here for security, were seized and sent to London. After the Restoration they were ordered to be sent back; but, unfortunately, the smacks in which they were freighted foundered in a storm, and thus the Scottish registers were unfortunately lost. Once more the Highlanders, under the Pretender, Prince Charles Stuart, made an unsuccessful attempt to reduce Stirling Castle, in the year 1746; and this was the last occasion upon which hostile batteries were erected against the venerable fortress. The celebrated "Douglas Room" was destroyed by fire somewhere about nine years ago.

The beauty of the surrounding scenery at Stirling is best observed from the castle; and we are quite certain there can be very few lovelier landscapes in Scotland. We stand, as it were, in the centre of a spacious amphitheatre, richly wooded and watered, bounded on every side by masses of hills and lofty mountains. The middle distance is everywhere cut up by picturesque villages and arable farms; several "craigs," like Craig Forth and the Abbey Craig (the latter impaired for ever in its natural beauty by that ill-fated Wallace monument which stands half-finished on its summit), jut out here and there from the plain, half-buried among venerable sycamores and fir-trees; while far below the river Forth pursues its zig-zag course through the rich alluvial "links" and meadows in the centre of the valley. The horizon is bounded on the north-east by the Ochil hills, which stretch from the valley of the Forth to that of the Tay; on the westward by the Campsie Fells; from the south-east, Edinburgh and the Lammermoor hills may be distinguished; while far in the north-west the view is terminated by the lofty peaks of Ben Lomond and Ben Ledi, and by other conspicuous mountains in the range of the Grampians. No language can convey an adequate description of this splendid panorama. From any point of view it is beautiful; but the finest prospect is that which is obtained after crossing the Castle garden at the north-western rampart

* Compare the necropolis at Glasgow, the Calton Hill at Edinburgh, and the Abbey Craig at Stirling.

a spot, we are told, at which her Majesty expressed so much admiration of the scene during her visit in 1842, that it has since acquired the somewhat odd *sobriquet* of "the Victoria look-out."

Of the castle itself we shall have very little to say in the way of description. There is an esplanade, of course, a double wall and fosse, a drawbridge and portcullis, with the customary sentinels to be passed before we reach the interior. This consists of a quadrangle which must at one time have been spacious and noble, but which is now extremely dilapidated and broken down. The Parliament-house, which forms the eastern side, has been barbarously disfigured in the process of converting it into barracks. The arsenal, which forms the northern side, is built on the site of a famous Chapel Royal. The palace of James V. and his Queen Mary of Guise, which constitutes the south side of the square, is the only structure which preserves its ancient exterior; and certainly gives us a very clear idea of the licentious style of the French architecture which then came into vogue at the Scotch Court. The walls are adorned with statues representing deities of the Greek mythology—Diana, Venus, Omphale, and Perseus,—mingled with statues representing members of the Royal Family, most of which rest upon curious balustrade pillars, supported by grotesque figures and corbels, all, we must say, exquisitely carved for the period. The Douglas Room, which is contained in the western side of the quadrangle, was, as we have said, recently destroyed by fire, and is now, with the rest of the building, converted into barracks. The general impression we have retained of this ancient fortress, palace, and seat of government, is one, no doubt, of romantic interest; but accompanied with a much stronger feeling of regret at its dilapidation and decay. The very rock upon which it stands is gradually disintegrating: in plainer language, it is slowly but surely falling to pieces.

The rock upon which Stirling Castle is built rises to a perpendicular height of about 220 ft., and bears a considerable resemblance to the rock of Edinburgh Castle, though much inferior in dimensions. Both constitute that species of igneous rock which geologists denominate "crag-and-tail,"—that is, they present an almost precipitous front on one extremity, and on the other a gradual declivity at a well-known and nearly constant angle. We must not stay to speculate on their geological structure. It is sufficient to say that the best authorities suppose them to have been produced partly by the action of running water and partly by the erosion of moving ice. One conspicuous effect of the peculiar configuration of such rocks is, that the precipitous crag is continually exposed to the *weathering* influences of the atmosphere—to variations of temperature, to thunder, lightning, rain, and particularly to frost: hence their gradual though silent decay is as certain, although not so apparent, as any other ordinary operation of nature.

After a pretty close examination of the rock upon which Stirling Castle is built, our impression was that it had reached that stage of decay which might well be pronounced dangerous. There is no security whatever that an unlucky tourist who is walking round the castle bank for the purpose of enjoying the exquisite scenery, may not any day become a victim to the sudden separation of an outlying crag from its parent rock. If we may judge from the enormous masses of detached rocks and decayed boulders which are scattered about the slopes and lower grounds of the castle, such a phenomenon as the excavation of a hundred tons or so of "trap" or "conglomerate," would not be, at all events, a novelty. And if we might venture to point out a particular instance of potential danger, we must say that the masses of columnar basalt, probably 80 ft. or 90 ft. high, which support on their summit the ancient palace of James V., at this moment filled with Highland soldiers, seem to be in a rather tottering condition. From a point immediately above the castle "sludge-pool," we could easily perceive numerous vertical chasms and fissures which extended deep into the crag, and were evidently the consequence of long-continued exposure to the weather. Of course we are quite aware of the greater security of basaltic columns as a foundation when compared with any form of stratified or metamorphic rock; still we are not satisfied with their appearance. If we confine ourselves to the assertion, which we believe will not be readily disputed, that this foundation cannot be so secure as it was 500 years ago, then it becomes a mere question of degree. We cannot do better than recommend the whole subject to the Government engineer, if there be such a functionary in Scotland. For although we are not alarmists ourselves, and cordially dislike the school of prophets who are constantly predicting evil, we must still point out that these are days of "appalling catastrophes;" and it is our duty to do what in us lies to avert even the possibility of such a calamity as that of a military barrack tumbling over the face of a decayed rock. The ivy which partially conceals the interstices is a most frail and deceitful protection.

What good purpose is served, after all, by making troops bivouack on these cold, bleak promontories of Edinburgh and Stirling is quite beyond our capacity to perceive. Their use as the sites of fortresses has gone past: one or two heavy Armstrong guns would batter the best of the old military castles in Christendom to atoms. Still less can we account for the infatuation of "the authorities" in converting these castles into powder magazines. There is nothing more certain than that their explosion—a probable enough occurrence—would reduce the surrounding cities to a mass of indistinguishable ruin! To speak of the vandalism of converting royal palaces into bad military garrisons, were now out of the question. We can only speak of the results, and these may be briefly summed up. It was an error from the beginning, and will be so to the end. Indeed, the only excuse we can discover for the delinquents seems to be that by the treaty of Union it was stipulated that the four castles of Edinburgh, Stirling, Dumbarton, and Blackness were to be kept in repair and garrisoned. But surely such antiquated political considerations ought to give way to the health of the troops. It is no longer a matter of opinion that the high death-rate of the army is chiefly sustained by colds and consumption; and we could scarcely conceive of conditions more favourable to the growth and increase of these fatal maladies than to force our soldiers to eat their meals and sleep on the summit of an isolated and precipitous "craig"—particularly where cold raw east and north-east winds predominate as they do in Edinburgh and Stirling. For the poor Highlanders—who, by a foolish superstition at the Horse Guards are still kept innocent of breeches—it is really too bad. In their case it is adding insult to injury; for if these poor men are worse clad than other regiments, surely they are better entitled, by all the laws of compensation, to have warmer barracks!

We have lingered so long on the castle of Stirling that we must get over the rest of the ground more rapidly. At the foot of the Esplanade stands "Argyll's Lodging," a rather extensive quadrangular building in the latest Scotch Baronial style, which is now converted into a military hospital—with what result we cannot say. Lower down the hill there is a large half-ruined or half-finished building, that goes under the name of "Mar's Work," containing some curious lintels and doorways. It is said to have been built by the Earl of Mar while Regent of Scotland, chiefly from the stones of the ancient abbey of Cambus-Kenneth, on the other side of the river, which, for this purpose among others, was thus despoiled at the Reformation. Close to this building is situate the principal church in Stirling, evidently the ancient cathedral of the burgh transformed into a Presbyterian Church, as was the fashion in Scotland. From the general appearance of the building—the remains of the heavy stone roof of the chancel, the square western tower which rises to a height of 90 ft., the walls and buttresses with canopied niches and pinnacles, and from the eastern doorway (now disused) which is arched and deeply recessed, possessing heavy clustered shafts with enriched capitals, we should say it belongs to the later period of the fifteenth century. Close beside the church is Cowan's Hospital, founded in 1639, which contains a rather fair specimen of a guildry hall of the Tudor period. In St. John-street, leading down the steep incline, stands the County Prison, erected at a cost of 10,000*l.*; and close beside it lies the former town mansion of the Earls of Linlithgow, now converted into dwelling-houses. Hard by is an obscure and humble-looking tenement, now let as common lodging-houses, which is all that remains of the residence of Bothwell. The ancient Royal Mint of Scotland, now doing duty as an ale-house, is still pointed out. But we need not continue to enumerate the antiquities.

The bridges over the Forth are, however, worth noticing. Even the ancient bridge, which is supposed to be about 400 years old, is still deserving of study. It consists of four arches, with a very narrow roadway elevated in the centre. Although now disused, it was for many a long year the only point of communication between the north and south of the river. Formerly it was defended by two towers at each end, with a gate between them; and other two towers occupied the centre—a useful precaution in the days of Highland caterans. About a hundred yards farther down is the new bridge erected in 1831; a very handsome structure, built of granite. Close to this are two railway bridges, one of iron and the other of timber, both resting on stone piers, and both very good specimens of railway construction.

The churchyard, which lies between the castle esplanade and the church, is one of the great attractions of the place; indeed, we have met with no sweeter cemetery in all our wanderings than that of Stirling. It owes, no doubt, much of its beauty to nature; but much has also been done for it by art. We believe that Mr. Drummond, an opulent seedsman of the neighbourhood, has spent nearly 5,000*l.* in embellishing this romantic burying-ground—and we must not complain if his tastes are somewhat *rococo*, if not positively out of keeping with the sacred character of the place. The neat rustic bowers, ornamental fountain, and miniature iron bridge, are well enough in their way, perhaps; but surely a fish-pool is a bad idea in a cemetery. Nothing can be more appropriate or more touching in its silent expression than the plain runic cross of red Aberdeen granite, which records the death of the Highland soldiers who fell in the Crimea. We cannot say as much for the pretentious group of sculptured angels, in white Carrara marble, which is supposed to typify the sufferings of the Wigton martyrs. Nor do we understand how it happens that all the Presbyterian divines that ever lived, from Calvin and Knox down to Erskine and Guthrie, should have statues in this Walhalla of Stirling Churchyard. The massive pyramid of freestone which has been erected to the memory of the Covenanters, profusely decorated as it is with intaglio crowns, sceptres, and other emblems of immortality, in white and blue majolica, might have extorted our commendation; but we most unfortunately discovered on the lower plinth of the surbase a tiny inscription, in white marble gilt, to the effect that certain religious tracts—"The Light of the Star," "The Valley of the Rock," "The Anthem of Grace," &c., are all published at such a depôt, in such and such a street! What a climax! *Ut pol, Hercalem*, says the ancient proverb—which being freely translated into our most classical modern language, signifies, "Who's Griffiths?" Some uncharitable people might suppose that the whole thing was an advertisement, not so much of the poor Covenanters as of a certain well-known Sectarian Scotch church.

In truth, however, the Stirling people may take what they get in the shape of public spirit and be thankful. With the exception of the county gaol, one or two branches of Edinburgh banks, some recent warehouses and suburban villas, there are very few buildings in Stirling that can pretend either to good taste or magnificence. The modern churches are for the most part destitute of the principles of design, and in point of construction they are not much better. One Free Church we visited put us in mind, in its timber-work, of the interior of an old Dutch man-of-war. Another Scotch Episcopalian church had the beam of its gallery supported at one extremity by a transome resting on a single mullion and jamb of a tall pointed window.

The public buildings, the Court-houses, the Town-hall in Broad-street (before which formerly stood the city cross, long since demolished, of course), and the Athenæum in King-street, are all of them very poor structures. The latter, which overlooks the principal square of the town, is disfigured by a hideous freestone statue of Wallace,—a sort of cross between the Farnese Hercules and a Red Indian,—surmounting a badly-designed porch, that seems to have been erected for the purpose of a pedestal. On the lintels of this porch are carved divers inscriptions concerning liberty and freedom,—very good sentiments, but very badly represented by this artistic production. Indeed, the Scotch, it must be said, are unfortunate in their statues of Wallace; for every sculptor that has hitherto tried his hand on the subject, from Patrick Park to Handyside Ritchie, has failed egregiously. Nor can it be said that they are one whit more successful with their monuments. Indeed, since we have mentioned this illustrious patriot, it

may be worth while to inquire whether some of his countrymen are not doing their best in the matter of monuments to bring his name into discredit. The monument on Abbey Craig, about two miles from Stirling, languishes for want of 3,000*l.* more. Since it has advanced so far it would be a pity not to finish it; but we will take an opportunity in another article to point out some even more pressing requirements in Stirling than raising monuments to ancient heroes.

THE MATERIALS FOR THE NATIONAL ALBERT MEMORIAL.

AT the present moment, when the extensive sculptured works connected with the Prince Consort Memorial in Hyde Park are about to be executed, the following paper by the late Mr. C. H. Smith, written some time before his regretted death, will be read with interest, and would seem to demand consideration:—

In offering a few remarks respecting the proposed memorial to the late Prince Consort, I may first observe that, at no other period in British history have the people collectively contributed so large a sum as, at the least, 100,000*l.* for a monument to the memory of any individual; therefore, it seems to me, that the universal desire should be to construct it, if possible, with such materials as are likely to endure from generation to generation, deriding equally the destructive petty thief and rapacious wholesale plunderer, as well as the frigid rains and scorching solar rays, with as little decay or need of reparation as the accumulated learning, science, and experience of the nineteenth century will enable the directors to exercise in the management of so unusual, so important, and so costly an undertaking.

I do not attempt to put myself foremost, or even in the ranks of chemists, mineralogists, geologists, or other scientific classes; nevertheless, circumstances have repeatedly favoured me during the long period of more than half a century with opportunities, not only of observing and remarking, but of vigilantly watching, from time to time, the extraordinary effect of weather in the rapid destruction of certain varieties of stone or marble, and the determined resistance, during ages, of other varieties, against the most severe atmospheric influences, although the scientific observer or chemical analyst might pronounce such specimens to be similar substances. Much as I reverence the judgment and opinion of those individuals who have devoted their lives to the contemplation and advancement of physical science, I cannot help noticing that many instances occur wherein nature and time together overthrow some of the most ingenious theories, so as to perplex or baffle the learned philosopher in seeking for an explanation.

The competitors for the Prince Consort Memorial seem to express an opinion, that marble should be extensively used in the construction and decoration of the edifice; and, in order to protect it from decay, they recommend that the statues and sculptured groups should be under cover. No doubt, the most durable variety of white, or statuary marble, is that which is unaccountably named "Sicilian;" but all the varieties of Carrara marble have perishable qualities which ought to preclude them from ever being applied to external purposes when intended to last for a century, or more, in our climate. The white statuary, Italian veined, dove-coloured, and Ravaccioni (called "Sicilian") marbles, are but very slight variations of the same substance; the dove, and Sicilian, have a little more carbonaceous matter in their composition: they are all procured from quarries in the immediate neighbourhood of the town or village of Carrara, in Tuscany.

The decay of nearly all limestones takes place by *decomposition* from the surface only; the solid part which remains is unaltered; but when Carrara marble has been exposed to the weather, and to variations of temperature, during thirty or forty years, *disintegration* through the entire mass, but mostly on or near the surface, has evidently taken place, and the crystals no longer adhere firmly to each other. The external appearance may remain unaltered, but the destructive influence of climate will continue to penetrate deeply into the mass, the cohesion of the particles will be imperceptibly destroyed, and after the lapse of a century, more or less, according to quality of the marble, the entire substance will fall into a kind of sparkling sand. The group of Queen Ann, &c., in front of St. Paul's Cathedral, executed in Carrara marble by Francis Bird, in the beginning of the last century, has long since been painted, in order to preserve it a little longer from total ruin. The statue of George III., executed in marble by J. Wilton, R.A., and placed in one of the niches, under cover, at the old Royal Exchange, was taken down to be repaired about forty years since, and was found to be too much decomposed to be put up again; it has long since actually crumbled to dust. A mural monument made of similar material, by J. Nollekins, the sculptor, about the year 1780, and erected over the centre door within the portico of St. George's Church, Bloomsbury, hence, well protected from rain, snow, &c., fell from the wall on to the pavement of the portico, during the winter of 1837-8; it was so thoroughly pulverised, and widely dispersed on the floor, as to resemble a fall of snow rather than blocks of marble.

Many sculptors, masons, and others, entertain a high opinion of the durability of Ravaccioni marble, erroneously called Sicilian, and name the archway entrance to Hyde Park from Oxford-street, as a specimen. There certainly is reason to believe it to be a material likely to resist the action of an English atmosphere longer than Italian veined, or white Carrara marble; but on attentive examination, it will be found that its chemical and mineralogical character scarcely differs from them, except in weight, hardness, and containing a little more carbonaceous matter. These qualities are by no means sufficient, to warrant an idea that the Ravaccioni marble will last considerably longer, than such as have heretofore been in general use, in our country. The marble arch was removed from its former site, twelve or thirteen years since. While it lay in detached pieces, on the ground in the Green Park, I had a good opportunity of minutely examining the condition of those parts which had been exposed to the most severe tests of weather, such as cornices and other projections; they were all unquestionably in an early stage of decay, and before the blocks of marble were again erected in their present situation, not fewer than a dozen, probably twenty, masons and labourers were employed, to rub with sand and stone, all the surfaces which had been exposed, thereby removing a minute portion which was observed to be in a state of disintegration. Therefore, the marble of this edifice should only be inspected as a work of twelve or thirteen years weathering. In the burial-ground of St. John's-wood Chapel, between Regent's Park and Edgware-road, there is, close to the chapel, a large sepulchral monument, executed entirely in Sicilian marble, by Sir F. Chantrey, about forty-five years ago, to the memory of David Pike Watts; all the exposed parts are most certainly mouldering away, and may be abraded off with the fingers, like sand. This tomb I believe to be the oldest specimen in London, if not in England, of the material now under consideration; therefore it is the most suitable example I can recommend for examination, as regards the durability of such kind of marble, when exposed to the weather, in or near London. Numerous other instances might be stated, but it is presumed the above are sufficient to show the unfitness of that description of marble for such purposes. It is not known to a certainty from whence the Romans procured their marble, but this is certain that the Roman antiquities are not of Carrara marble.

The question may be asked, "Why have the Elgin marbles, and other ancient Greek and Roman sculptures, resisted the mouldering touch of time for more than twenty centuries?" A long and highly interesting article might be written about this subject; but, for the present, suffice it to say, that the same elements uniting in the same proportions do not necessarily generate the same substance: common white chalk, Carrara marble, and many of the oolitic limestones, present scarcely a trace of difference in their chemical composition. To all appearance, the marble of Pentelicus, in the neighbourhood of Athens, is an aqueous deposit, similar to the stalagmites, travertines, and other calcareous formations, constantly operating in the fresh-water currents of Italy; most of which are extremely durable when applied to sculptural or architectural purposes. Taking many circumstances into consideration, besides the curious progress of decay in Carrara marble, and comparing them with a long series of experiments, undertaken many years back by Sir James Hall, to verify a principle previously assumed by Dr. Hutton, in his "Theory of the Earth," we are induced to believe that Carrara marble has been considerably altered or modified in its crystalline structure by volcanic agency, acting under excessive pressure of superincumbent earth, or perhaps earth and water, while excluded from the atmosphere. In one case the same elements are consolidated through the agency of water; and in the other by the influence of fire; therefore we must expect that the produce will vary considerably in duration if subjected to the same atmospheric influences: and the instances already mentioned are quite sufficient to show that Carrara marble is a material unfit to be placed in situations exposed to the weather in this country; even if it be protected from rain and snow, its ultimate ruin will not be much prolonged, as frequent changes of temperature destroy Carrara marble more rapidly than the influence of wet and dry: the mantel, or that portion above the fire, of a marble chimney-piece, is invariably disintegrated long before any other part.

Within a few years it has become the fashion amongst the wealthy to have monuments in cemeteries constructed entirely of marble; either to gratify their vanity by surpassing a humble neighbour, or under the impression that it is more lasting than ordinary stone. As a general rule, masons and sculptors recommend it; and whoever attempts to argue or remonstrate with the manufacturers against its use is sure to be answered that "it will last our time, it yields the largest profit, and consequently it makes good for trade."

Having pointed out the defects in all kinds of Carrara marble, I will now name a few examples of good and bad varieties of Portland stone. During the whole time that these quarries have been worked, there has been no want of proofs to show that most excellent stone and also the most perishable may be obtained from the same neighbourhood, and generally even from the same quarry: therefore, if the parties who have the management of a building are ignorant or careless in this matter, there will certainly be some portion of the stone introduced of an objectionable quality; perhaps the whole elevation may be constructed with the perishable kind. A few instances in London may be mentioned by way of illustration. The two archway entrances from Piccadilly to the Green Park and to Hyde Park were both erected by the same mason, under the direction of the same architect, very nearly at the same time—about 1820 to 1824; yet the Ionic building is infinitely more decayed than its Corinthian neighbour. All the masonry of the river front of Somerset House above the terrace is gradually mouldering away; whereas other elevations of the same building are nearly as perfect as ever they were. To show that the southern aspect, with exhalations from the river, has little or no influence on the destruction of the stone, the lower part of the same elevation, that is to say, all below the terrace, is in excellent condition. The upper and lower portions were built by different masons, from designs by the same architect, about 1770 to 1775. Exactly one century earlier, Sir C. Wren was the architect of Temple Bar, and "The Monument," near London Bridge; both these buildings were in hand at the same time—about 1670; yet, at this time, many of the projecting parts of the western front of the City gate, are so much effaced by weathering, that it would be difficult to decide what form they had originally presented. The contrary effect is most conspicuous on the sculptured front of the pedestal of the before-named City column, which also faces the west, and which is an example of a large surface, composed of about forty blocks of Portland stone, carved in very bold relief, consequently exposed to all the severest atmospheric effects of frost and thaw, wet and dry, hot and cold, during the long period of 200 years, the stone being at this time *perfect*; nor is there any reason to entertain an idea, that another two, or even three centuries' weathering, will appreciably alter the appearance of Gabriel Cibber's grand carving of the Fire of London.

The same arguments will apply with equal force to the numerous class of magnesian limestones, such as that used at the Palace of Westminster, or any of the superior kinds of calcareous building stones. The before-named parallel cases show that good Portland, or other durable stone, may at all times be obtained or insured for any building, provided the party engaged, whether architect, builder, or mason, understands the subject, or knows the distinction between good and bad, without waiting for the test of twenty or thirty years' weathering.

No department of the science of architecture is at this time less understood, or generally less appreciated, than that which relates to the qualities of building-stone. Palatial-looking edifices are sometimes adorned with polished granite in an elevation constructed with a perishable variety of the softest stone ever used for building: hence, abundant evidences of decay are conspicuous long before the structure can be fairly said to be finished.

Any of the good and durable building stones erected in or near the metropolis soon become blackened with the smoke in a London atmosphere. Should any appear from a distance to retain something like their natural colour, the cause may arise from a constant disintegration going on, and thereby occasionally presenting a fresh surface. There are eight or ten marble statues in niches within the three porticos at the National Gallery, which are as black and dirty as any part of that building. It has been recommended that white or light-coloured marble should form an important feature in the edifice now under consideration; and as experience and observation plainly show that Carrara marble is decidedly unfit for the purpose, in its place I now propose a material which will most probably answer the same purpose, without its objectionable properties. At Hopton Wood, near Warksworth, in the county of Derby, there are very extensive quarries of enchrinital limestone, which have been worked in the neighbourhood during time immemorial, and used especially at Chatsworth, Belvoir Castle, Trentham Hall, and Drayton Manor. The material is decidedly *marble*, for it is fine-grained, compact in texture, and quite hard enough to take a brilliant polish. The colour is pale brownish white, certainly as white as Sicilian marble, which approaches to a bluish gray. It is much heavier than Portland stone, but lighter than Carrara marble. Blocks of very large dimensions may be obtained, free from serious defects; and as it is an aqueous formation, hard and well crystallized, there is no doubt of it standing weather extremely well. Both material and workmanship, in London, are less expensive than that of Sicilian marble. The Hopton Wood stone, or marble, has never been used for building in London; but there is a large quantity of this material which was laid down about eight or ten years since for foot-pavements and steps, close to the Parliament Houses in Old Palace-yard, and part of Abingdon-street, Westminster; and although in a situation where it forms a public footpath which is in constant use, no symptoms of decay or of the surface wearing away are perceptible.

Metal.

One of the competitors has stated that "there can be no question as to the enduring qualities of bronze; it has been dedicated to the use of works of art of an important and historical character from time immemorial." This is a generally received opinion, and it may be correct as regards natural decay; but there are considerations to guard against far more important than the mouldering touch of time. Human nature has been the same in all ages, in all countries, and will continue to be the same whenever the same temptations are offered. Bronze, silver, and gold, have been objects of rapacity throughout the world, from the dawn of civilization until the present time. The history of every nation where the fine arts have been promoted teems with almost marvellous descriptions of numerous sculptures, executed in valuable materials. The statues and other decorations, of gold and silver, at Babylon and Nineveh, said to be worth twenty millions of our money, were quite sufficient to excite the desire of plundering conquerors. Some of the most insignificant colonies of Greece and Italy are recorded to have possessed several thousand bronze statues, many of which were of extraordinary colossal dimensions. Perhaps we may pronounce, with little fear of contradiction, that except a few diminutive specimens, scarcely a remnant remains in its original shape of that host of metallic images, the whole having been destroyed for the value of the bronze. In all probability some fragments of the Colossus of Rhodes, or of the Phidian Jupiter, would have remained to this day, had they been sculptured in granite, Greek marble, common stone, or any other material that is intrinsically of little or no value.

In our own country, during the Middle Ages, the high altar in most of the large churches shone with a brilliant profusion of the precious metals in images of saints, candelabra, vessels for holy water, &c., of an incredible value. These rich shrines presented fine objects of plunder, either to merciless invaders, or to a monarch who might determine to enrich his exchequer under the pretence of reforming abuses of the Church. At Westminster there is a remarkable instance of the misapplication of material. Queen Katharine caused a statue of her husband, Henry V., to be placed on his tomb. It was carved in oak, and covered with plates of silver. The head was made of massive silver, and consequently all the valuable material was very soon stolen, in which headless condition the wooden core alone remains to this day. The other royal tombs in the Confessor's Chapel have suffered severely from the hands of sacrilegious plunderers. Sceptres, canopies, crowns, and nearly all the small parts which could be easily pilfered, have been stolen for the value of the metal. The same remarks will apply to innumerable instances of wilful destruction and purloining of the memorial brasses from gravestones and marble slabs in our cathedrals and village churches throughout England. Here and there, left to its fate, as if by accident, a small fragment of brass may be observed, or a few holes where the metal had been fastened to the stone; but, generally, every bit which could readily find a purchaser was stolen, leaving the indent as a memento of something that had at one time been there.

Monuments of an important character, the same as pictures, ought to be valuable in proportion to the amount of talent displayed in them as works of fine art; and, if intended to be lasting, they should not only be executed in a material which is proof against the decomposing effects of weather, but should also be, as near as possible, valueless for any other purpose, so as not to create mercenary ideas in the mind of a needy observer, either of high or low condition in society. The granite statue of William IV., near London Bridge, will probably be left as a material almost worthless, scarcely worth the labour or cost of throwing down to break to pieces for the purpose of macadamising the roads.

The learned and the fashionable of all nations, in all civilized ages, have been, and still are, unanimous in their admiration of the effect of gold for statuary. It is improbable that the purely refined taste of the Greeks, or the gorgeous display of the magnificent Romans, would have been satisfied with the appearance of many thousand dirty-looking, dark-green, or black statues. Many antiquaries are of opinion that the numberless bronzes of the ancients were generally, if not universally, either wholly gilt, or coloured in some way, to give them an appearance of finish, which the gloomy effect produced by weathering could never have presented; nor is it likely that the base metal would satisfy the eyes of educated people. If the substantial mass of the statue, or group of figures, is to be wholly covered or hidden, so that an observer can form no conception of what is under the surface, why should it be made of bronze or other metal, which is intrinsically of value at all times; therefore, at one time or another, sure to be melted and applied to other purposes? If the entire surface of the sculpture is to be enriched with gilding, why not carve it in good stone, and gild upon that, when, if properly done and viewed from a moderate distance, the most scrutinizing eye could see only the external film of precious metal? Hence the effect would be the same as if it were of solid gold, or of bronze with a gilt surface.

I know the difficulty of contending against prejudices in favour of long-established practice, and fancy I hear the din of uproarious voices against "*shams*;" but as regards the application of gold on a large scale, we are accustomed to such *shams*, without supposing they are meant to delude by false appearances. Ornaments, either large or small, whether made of silver, brass, stone, or plaster, and afterwards gilt, are decidedly *shams*. Neither is it likely that any individual could be so simple-minded as to suppose that the frames of pictures and looking-glasses which he had noticed in the state apartments of Windsor Castle were made of solid gold; whereas he would feel sure that the articles in use for similar purposes which he might have observed in humble residences were all "*shams*." The pictures within the frames are all *shams*, for they really are not that which is represented, and the more deceptive they are the greater is their merit, and the higher their value as works of art.

Respecting mosaic work externally, on a perpendicular ground, with *our present knowledge*, I fear there is no cement that will permanently attach the little vitreous tesseræ to a ground that will endure for years the extremes of temperature, from Zero at four or five o'clock on a winter's morning, to 120 Fahr., during an afternoon's sun in summer time. C. H. Smith.

PLEASANT APARTMENTS IN PADDINGTON.

While directing attention to the ill-condition of the east London districts, we must not neglect places elsewhere which require great care. Take parts of Paddington, for instance. Here is a note of the condition of a room in the basement of a house in North-street, in this parish, which is occupied by a shoemaker, his wife, and six children. The room is very small, and barely allows of persons moving about. The dilapidated condition of the place is shocking. The floor is full of holes, into some of which a cat can enter, and in one day has brought up as many as five or six rats. These animals in the day-time, in the absence of pussy, become somewhat tame, and run about the room. There are two beds in the room, one on the floor. A person calling noticed a movement of the bed-clothes of one; and, thinking it was caused by a child, directed attention to the circumstance. On examination, it was found that a large rat had burrowed into the flock. Some of the children sleep on a bed on the floor; and, to keep the rats away, the holes are stopped up with rags and other matters. But this is not effectual; and often the man has been obliged to get up in the night for the purpose of driving them away. There is something revolting in such a state of things. The floor is so rotten that it shakes when the occupants walk over it; and the drain from the closet passes somewhere near the fire-place, and causes a most dreadful smell. Nevertheless, the rent is 2s. 9d. a week. The next apartment to it was originally a wash-house; but from this the landlord has removed the copper, and lets the place for a habitation, at a rent of 2s. a week; while the copper has been set up in the yard, without covering, close to a window; and when the fire is lighted, the smoke and the steam are almost unbearable. Some will say, why do the occupants keep their children in such a place? But it is not easy to find houses where they will take so many children. We therefore, for the present, refrain from giving the address of this house, lest the family should be turned into the street. But it would be well if the sanitary officers were to look about in that direction, for the landlord refuses to attend to the complaints of the poor people.

HALIFAX SCHOOL OF ART.

The annual *soirée* of this institution has taken place in the new Assembly Rooms, on which occasion there was a very respectable attendance, the walls being as usual adorned with the productions of the students. The chair was occupied by Col. Akroyd.

Mr. C. Ryan, head master, read the report, which stated that the progress of the school for the past year had been steady, and that he saw no reason to doubt that its future would be better than its past. The attendance at the central school was improving: there were then on the books 137 students, or twenty-five more than last year's total. Of this number, 36 had been carpenters, mechanics, carvers, &c.; 14 designers, architects' apprentices, and draughtsmen; 31 teachers and pupil teachers; 32 clerks and youths, and 24 ladies. The number of those who had passed the Department's examination, last June, was unusually large: 30 had passed the superior or second grade, and 57 the first grade or elementary examination. The total number passing from all the schools and classes was 87, whilst that of last year was but 46. The total number in and connected with the school, either in public or private classes, was 1,101, showing an increase of 89 on last year. The number of local medals taken this year was 19, being the largest number yet gained in this school, and two honourable mentions; and also, for the first time, two national medallions, and one national honourable mention. The total value of art-works awarded this year, on account of medals and medallions, has been 29*l.* 10*s.*

"THE PUISNE'S WALKE ABOUT LONDON."

The following ballad (now first printed), detailing, pleasantly enough, a "Bumpkin's visit to London," may be safely assigned to a period as early as the reign of Charles I. I have transcribed it from a MS. in the British Museum (Harleian MS. 3,910, fol. 37), and added a few notes. The references and other allusions to the Lord Mayor on horseback (in his robes, of course), carry us back to the days of Holinshed and Stow, while the Tabor, in Fleet-street (what will Mr. Babbage think?), speaks of holiday and Tarlton mirth in London when peelers, and gas, and cabs, and 'buses, were alike unknown. What my ballad-monger would have said and sung had he seen London now (under Messrs. Thwaites & Co.'s clever manipulation and transmogrification) I cannot pretend to think, even as a "Puisne" Judge. PETER CUNNINGHAM.

"When I came first to London Towne,
I was a novice as most men are;
Methought yᵉ King dwelt at yᵉ sign of yᵉ Crown,
And the way to Heaven was through yᵉ Starr.

I sett up my horse, and walkt to Paule's,
'Lord,' thought I, 'wᵗ a Church is heere!'
And then I swore by all Christen soules,
'Twas a myle long or very neere.*

Nay, methought, 'twas as high as a hill,
'A Hill!' quoth I, 'nay, as a Mountayn;'
Then up I went wᵗʰ a very good will,
But gladder was to come down againe.

For on the topp my head turn'd round;
For be it knowne to all Christen people,
The man's not a little way from the ground
That's on the top of all Paule's steeple.

To Ludgate, then, I ran my race:
When I was past I did backward looke;
Ther I spyed Queen Elizabeth's grace,†
Her picture guylt, for all gould I tooke.

And as I came down Ludgate-hill
Whome should I meet but my good Lord Mayor,
On him I gap'd, as yongsters still
Gape on toyes in Bartelmew faire.

I know not wᶜʰ of 'em to desire,
The Mayor or yᵉ horse, they were both so like;
Their trappings so rich you would admjre,
Their faces such non could dislike.

But I must consider perforce
The saying of ould, so true it was,—
'The gray mare is the better horse,'—
And 'All's not gould that shines lyke brass.'

In Fleet-street then I heard a shoote;
I put of my hatt, and I made no staye;
And when I came unto the rowte,
Good lord! I heard a Taber playe.

For, so God save mee, a Morrys Daunce:
Oh! ther was sport alone for mee,
To see the hobby horse, how he did prraunce
Among the gingling company.

I proffer'd them money for their coats,
But my conscience had remorse;
For my father had no ostes,
And I must haue had the hobbie horse.

To see the Tombes was my desire,
And then to Westminster I went:
I gave one twopence for his byre,
'Twas the best twopence yᵗ e'er I spent.

'Here lyes,' quoth hee, 'King Herry the Third.'
'Tis false,' said I, 'hee speaks not a word.'
'And here is King Richard yᵉ Seacond inter'd;
And here is good King Edward's sword.

And this,' quoth hee, 'is Jacob's stone,
This very stone here under yᵉ chaire.'
* * * * *

I tooke a Boate, and would stay no longer;
And as I towards yᵉ Bridge did rowe,
I and myself began to wonder
Howe that it was built belowe.

But then my friend, John Stow, I remember,
In's Booke of London call'd the Survay
Saith that, on the fifthe daye of September,
With wooll-sacks they did it underlay.

Then through yᵉ Bridge to the Tower I went,
With much adoe I wandred in;
And when my penny‡ I had spent,
Thus the spokesman did begin:—

'This Lyon's the King's, and this is the Queene's,
And this is the Prince's yᵗ stands by him.'
I drew nere, not knowing wᶜʰ hee means.
'Wᵗ ayle you, my frend, to go so nigh him?

Doe you see yᵉ Lyon this yᵗ lyes downe?
It's Henry the Great, twoe hondred years olde.'
'Lord bless us!' quoth I, 'How hee doth frown!'
'I tell you,' quoth he, 'hee's a lyon boulde.'

Now was it late, I went to my Inne;
I supt, and I slept, and I rose betymes,
Not wak't wᵗʰ crowes, nor ducks quarkling,
But wᵗʰ the noyse of Cheapside chymes.§

* The nave of Old St. Paul's was very long.
† The statue of Queen Elizabeth, formerly at Ludgate, now at St. Dunstan's, Fleet-street.
‡ Our ballad-monger lived in the days when Peacham published his "Worth of a Penny," and a penny peep was a penny's worth.
§ Bow bells.

THE ROCK AND SORCERY-HALL SYMBOLS.

My first letter on Rock Symbols, of date *2nd July* last, which called forth the interesting account of Mr. Tate's discoveries in the *Builder* of 3rd September,—succeeded, as *it* was, by your correspondent "G. B. H.'s" account of the Argyllshire petroglyphs,—appears, however, to have been first of all quickly followed up by an address of the Rev. Dr. Bruce, on 29*th July*, to the Archæological Institute, which is that referred to by "G. B. H." as reported in the *Gentleman's Magazine* for October.

In speaking of the theories slightly alluded to by Dr. Bruce (prematurely, as he himself conceives) in that address, the following remarks on my theory are made by "G. B. H.,"—as if (by the way) he were speaking of an additional theory published *since* Dr. Bruce's address was delivered, or was printed, and not of the first and only attempt (as it is, even yet), to set before the public *any* theoretical views in respect to an order of symbols some of which, with all the usual characteristics, it appears, have been known for years,—without any theory having ever been publicly suggested until just after mine appeared in the *Builder*:—

"To these theories [alluded to by Dr. Bruce] may be added the one propounded by Mr. Dove in your own pages, which, *if I understand it aright*, considers them to symbolize *the powers of Life as radiating from* a central sort of 'Anima Mundi;' while, finally, many eminent men, who see traces of the 'Phallic theory' almost everywhere, are inclined to connect these mysterious symbols with that primeval worship. These hypotheses are very ingenious, especially that of Dr. Bruce."

That "G. B. H." does *not* understand my theory aright will be very obvious to those who have given a little consideration to the psychological key (in the *Builder* of 11th July, 1863) to all such symbols, which was repeatedly referred to in my letter on rock and other symbols, and is the fruit of occasional reflection for at least the last thirty-five years of my life. That key comprised a long letter in itself, and could not therefore be repeated on every occasion. "G. B. H.'s" misunderstanding may arise from his not having seen or considered this key, without which it is impossible that any one can be competent to give an enlightened or reliable opinion on the relative merits of my rock and sorcery-hall symbol theory, by comparison with the theories of those who have since publicly treated on the subject, and who, even then, have merely hinted at modifications of that already published theory, which, I submit, seems to have struck the key-note, as it were, of all such modifications as the Phallic theory; Dr. Bruce's theory of "the *new state of being* on which *the soul* enters at *death*, and the *development* of that existence;" or even the quasi-astronomical, or at least the "sun worship" theory. It is indeed notable that my letters on the probable original meaning of the "enigmatical" rock symbols in general, though developing one especial theory, comprised for the first time in print every one of those religious theories since alluded to by Dr. Bruce and "G. B. H." And no less notable is it that, although I forwarded copies of my first letter, of 2nd July last, on rock and other symbols, and of the psychological key itself, to Dr. Bruce; nevertheless, in since speaking of theories, he avoids making even the slightest allusion to *this one and only theoretical endeavour*,—then (or even now) actually *before the public*,—to deal with the subject; and it remained, therefore, for your correspondent, "G. B. H.," by way of addendum, so far to do me that justice.

As regards the idea alluded to by Dr. Bruce, that "they are simply indicative of *eternity*, and shadow forth the *soul's* longing for *immortality*," a glance at what I have written in connexion with the psychological key to all such symbols will show that I have regarded the spiritual or radiative life of god-possession in the initiation of entrancement, which these symbols, as I conceive, originally indicated, to be a life not in time at all, but in *eternity*,—a life, moreover, the influence of which, on soul and body, was, as I have shown, believed to be *immortalizing*, and hence to have converted those practising such god-possession after initiation, as their nightly rest, into a "*deathless* brotherhood." As to "*sun* worship," I have also repeatedly shown that the same radiative life was esoterically the true Sun and Apollo or central Hee or Hu of the Druids. And as for Dr. Bruce's own theory,—"the *new state of being* on which *the soul* enters *at death*," and "the *development* of that existence,"—just constitute an obvious modification of my theory, known to him when he read his paper, although he ignored it; the sole difference being that he substitutes the death *of corruption*, not at all doctrinally peculiar to the Druids, and which I advisedly rejected, for the death of entrancement, really or ostensibly practised in the Druidical initiations. The "future state" I have distinctly and explicitly shown to have been regarded, in the Druidical and other religions, as evokable, and fully evolvable, or *developable, in the death of entrancement*, and *altogether on this side of the death of corruption*; although, in the idolatrous and other degradations of religions, the secret death of entrancement was gradually lost sight of, and the very knowledge of its possibility lost; so that the *death* which divides the life of the soul and body, or "this life," of the ordinary waking state, from its immortalising *rest* in *eternity*, or in the spirit-life, came to be regarded solely and exclusively as the death *of corruption and the grave*. And this may well have been so in the latter era of the Druidical religion as in that of the cognate Egyptian, for example; the degradation of which, in idea, I have spoken of in one of my letters on Wing Symbols, in the *Builder* of 16th October, 1858, now out of print, and which I therefore take the liberty of here quoting from:—

"In the 'mysterious paradisa' of Osiris, 'dead' men 'became' the living 'god.' Now this rather startling dogma is not so unintelligible in its origin as may at first sight be supposed. Iamblichus, in his treatise on Egyptian mysteries, says that in the invocations of the god (to constitute an oracle), the invoker himself '*became* a sort of divine person.' Again, he says, 'In the contemplation of blessed visions *the Soul* assumes [puts on] ANOTHER LIFE, operates in another manner, and justly esteems itself *no longer man*. It *often* EXCHANGES its own life for the most blessed *life of the gods*; for the gods are immediately present with and *united to* all those who make the least approaches to them.' [Iamblichus de Mysteriis Egyptiorum, ed. Gale, pp. 22—27.] It is thus easy to conceive how, *in the decline* of such a doctrine, it might become confused with an idea that the mummied forms of the *actually dead*, ferried over to 'Osiris,' or the souls which had existed in these bodies, became Osiris himself.

The Soul *translated* to the gods—whether 'often' or only once,—in the true sense indicated by Iamblichus, was that of a living human being, who thus, for a certain interval, *exchanged* his own life for the 'life of the gods' [or the Spirit life of initiative entrancement]; and hence had no longer his own life *while* so translated; and was, therefore 'dead' to it. In fact, he was supposed to be 'dead *in the flesh*, but quickened *by the Spirit*,'—to use an expression which denotes the reality of what *may* have been but simulation in an Egyptian oracle."

As for the Phallic theory, I need scarcely remind your readers that a sexual idea is inextricably involved in my theory of the principles of *Life* in Soul and Spirit—to which I have maintained that the rock and sorcery-hall symbols refer;—the life of the Soul, the concentrative life, or "this life," being masculine, and *its centre its virility*; and the life of the Spirit, the radiative life, or "the new state," emanating from that centre, being feminine, and the conjunction or marriage of these two, in the death of entrancement or initiation, involving the whole mystery.

Thus, I humbly submit, in my letters to you in the *Builder*, which contain the first and even yet the only published attempt to theorize on this subject, I have, as I have said, struck the key-note of every religious theory of life since hinted at—I cannot even yet say propounded—in a published form.

As regards my own special psychological views of the probable original meaning of the rock and sorcery-hall symbols; so far from considering "the powers of life as *radiating from* a central sort of 'Anima Mundi,'" I have repeatedly shown the chief power of "this life," —the Soul itself,—to be a principle *concentrating to* a centre,—that centre of every Soul being the manhood, and "the Head, of every man," which universal Head, as I have remarked, is the Christhood of and *in* the man, whence the radiative Spirit emanates. It must be this grand unitive and identitive "Head of every man," or centre of every Soul,—the internal Christ of Fénélon, Coleridge, and others, and the one common centre of conjoint life, concentrative *and radiative*, animate *and Spiritual*, human *and Divine*, whom *not I*, but "G. B. H.," terms "a sort of *Anima Mundi*."

From or out of that one common centre of the concentrative, or Soul, however, I *have* described the divine Spirit as a power of life, *radiating*, not only "above measure," or as a greater or solar Light, in the ecstatic life of entrancement; but also as a lesser or lunar light, in the ordinary life of the Soul, or waking life, wherein it constitutes "the Light which lighteneth every man that cometh into the world;" illuminating his darkness in the life of the soul; while, in the highest region of the life of the Spirit itself, this Spirit, in full *possession* both of soul and of body, as a "Spirit of watching," constituted that sacred or

divine and *supernal* Spirit state which (or a demoniac and *infernal* simulation of which) was regarded, in various ancient religions, the Druidical inclusive, as the oracular state of god-possession, which formed the grand end and object of all their initiations, so long as these remained anything more than a mere mockery and empty form of real religion. And however beclouded with idolatry and other errors these religions may at length have become in their decline, still they possessed some of the essential forms of true religion even when utterly divested of all its substance. Thus it was that in the Phallic *centre-and-circle* symbol of all nations, the "bridegroom" *centre*, or virility of the soul, was pre-eminent; and the Hee or Hu of the Druids—"the Leader" or Captain of *salvation*, or of the *deathless* brotherhood, was that centre, round which they circled and danced in their frantic orgies.

God-possession, *in truth, has been the grand leading idea of all religions.* The translation of the soul to the gods, or to the oracular spirit life of initiation, was the god-possession both of body and of soul in the temporal death of entrancement—*not in the death of corruption*; and it was "thence," or out of the *eternity* of god possession in deathlike entrancement that the soul was "returned" into the temporality of "this life;" so that "this life" was "*often* exchanged for the blessed life of the gods" in the oracles and other initiates.

My leading idea, then, is that the rock and sorcery-hall symbols related *originally* to this grand doctrine; and the only difference between this theory and that now published by Dr. Bruce as his own, is, that he substitutes the actual death of corruption,—which did not occur in the Druidical initiations, but happens to every one,—for the mystical death of entrancement, only practised in the initiations of the Druidical Taliesins, and such-like religionists.

Before concluding, I would wish to make one other remark. In the address reported in the *Gentleman's Magazine*, Dr. Bruce says, "I trust that all who take an interest in the investigation *will aid me* by supplying any information or *suggestion* they may think useful," in reference to the rock symbols. Now, it is right that those who feel inclined to comply with this request should know, that for my part, I received not the slightest acknowledgment from Dr. Bruce, in return for the *suggestions* which *I* forwarded to him, with my card, in the shape of copies of the printed letters in the *Builder* already referred to; and, considering that Dr. Bruce *has* requested communications (MS. ones, however, no doubt) to be forwarded to him, and that it was in deference to what I had understood to be even his previously-expressed desire to that effect that *I* did so, he cannot plead, in extenuation of his suspicious want of ordinary courtesy, the stupid idea (which some people seem to have) that such an act of deference and respect was merely taking an offensive and unwarrantable liberty with him, which merited only a dignified silence by way of polite acknowledgment.

J. E. Dove.

THE DISPOSAL OF SEWAGE QUESTION.

The long-foreseen crisis is at hand when this great question must be settled. Municipal heads throughout the whole country are ruminating on it, and the elements of the question may be said to be fermenting towards a final settlement, whatever that may be, in which what is impracticable will be cast forth, and a definite and final issue of utility be attained. And that some such issue *will* ere long be attained we have every hope. But in the mean time municipal authorities only feel that they are in a great difficulty, out of which they cannot clearly see their way as yet. The deputation from various towns,—from Birmingham, Nottingham, Derby, Wolverhampton, Coventry, Preston, and Bath, to Sir George Grey, made this pretty evident. Their purpose was to pray him to introduce a public general Bill for the utilization of sewage (which was nonsense, for no Bill can cause the sewage to be useful, or compel landholders to use it), and also for preventing the pollution of rivers and streams. Now, although Government has long been notorious for skill in the way of "how not to do" many things, they are not the likely body corporate to teach either town councils or landowners how to do it,—how to prevent the pollution of rivers and streams. On the contrary, Sir George insisted on the deputation showing him how to do it; but so far from their being able to do so, they could not tell him precisely even what it was they wanted of him; and when each severally pointed out what his local circumstances led him to want, Sir George drew their attention to the fact that they already had what they wanted in the shape of power to deal with the subject. However, there were some points in which their power seemed to be defective, as in encroaching on or crossing land in the disposal of sewage, in combining with, or compelling, minor districts, to carry out with them a general system for the purification of rivers and streams; and so on. The one resolution to which they had arrived previously to the interview was—

"That in the opinion of this meeting it is absolutely necessary that a Bill should be introduced into Parliament in the ensuing Session by her Majesty's Government to enable local authorities to deal with and utilize the sewage of their towns and districts so as to prevent the pollution of rivers and streams."

This resolution they laid before Sir George; and it was finally agreed that a case should be stated; and at the close Sir George said the subject was a very important one, and had been under the consideration of the Government; but what he wanted was to have some practical suggestions as to the remedy which they asked.

The general opinion is that we *must* come speedily to some definite and practical conclusion in this most important matter; but at present there is an evident want of confidence in the plans which have been hitherto proposed; and many practical men are afraid that the sewage cannot be utilized near large populations, and that it is not yet sufficiently shown that the methods of deodorization are entirely to be depended on; and we fear that there will never be anything effectually carried out throughout the country until we have shown the successful completion of some one experiment on a great scale. This, we hope, may be decided in connexion with the metropolis ere long; but we trust that the experiment will be made, as now intended, at a sufficient distance from the nearly three millions of dwellers of the London population.

On the question of the impunity with which diluted sewage can be put upon land, Mr. White, M.P., expresses doubt; and refers to instances in this country, but more especially in China, where the liquid sewage is extensively used, showing that the effect is offensive, and injurious to health. Soon after the assemblage of Parliament, however, we shall have extensive, and, it is to be hoped, satisfactory evidence on the disputed points. At the meeting of deputies just referred to, there was an almost universal opinion expressed that we cannot continue to poison the rivers and streams, by draining the refuse of towns, &c., into them. As to this point, years ago, when advocating the water-closet drainage of the metropolis and large and populous towns, we directed attention to the results now every day becoming more apparent. We have referred to the Thames, the Tyne, and other important rivers; to the pollution of the waters in the neighbourhood of Manchester; to the immense population which drains into the Thames for many miles above London. It is to be regretted that a cure has not been sought for before the nuisance has in many situations become intolerable.

In the interview which the gentlemen above mentioned had with Sir George Grey, for instance, Mr. Higgins stated that at Warwick they were now in an awkward position, for a bill in Chancery had been filed against him by the Earl of Warwick for polluting the local river, and they had done all they could to take out 100 tons a day of solid sewage; but where they had put it to dry it had become an intolerable nuisance to the neighbourhood. But, in this case, why is not deodorizing tried?

The Cheltenham commissioners, we may here remark, having been threatened with legal proceedings for discharging 750,000 gallons of liquid refuse daily into the Chelt, have commenced some experiments, with the view to its utilization. The sewage runs into a large tank in the middle of Moor's Farm, on the Tewkesbury-road, and is thence distributed over the land. The experiments will be watched with interest.

The Rotherham Board of Health have memorialised Sir George Grey, praying for the introduction of a Bill into Parliament to prohibit the discharge of sewage into rivers, and blaming the Sheffield sewage in the Don for the ill-health at Rotherham; which, however, had long since been shown to be chiefly attributable to the want of water and the consequent choking of drains.

St. Saviour's District Board of Works, as we noticed last week, have passed a series of resolutions on the important subject of the utilisation of the sewage of the metropolis, as follows:—"That, in the opinion of this meeting, the time has not yet arrived for coming to a decision upon the best method of disposing of the sewage of the metropolis, as sufficient information as to its value is not possessed by any public body having the power to dispose of it; and, therefore, in the opinion of this meeting, the subject should be more thoroughly investigated by a select committee of the House of Commons, with a view of determining which of the plans for dealing with the sewage will be most beneficial to the ratepayers; and, further, that the clerk be instructed to prepare a petition to the House of Commons, praying for the appointment of such committee, and that the representative of the borough be requested to support the same." These resolutions having been read in a vestry of St. James's parish, it was resolved unanimously, "That this vestry concur in the resolution just read, and adopt the same; and that the clerk do communicate the same to St. Saviour's District Board."

MODERN ARCHITECTURAL WORK.

A correspondent, "W. H. H.," in the course of some observations on a recent letter in our pages referring to a work now in progress, says:—

Every architect and every man who loves good works because he really feels that there is something divine in art, is ready to admit that, in designing even the most insignificant building, it should be his delight to study even the most insignificant detail, so as to produce something in which the elements of true art are apparent. Now, this can be done by a master when he has really time to consider his work; but when a man has a large building to construct which is full of intricate work, and requires great care in the saving of time and expense, and which must at the same time be well adapted to the use for which it is intended; and when all this must necessarily be completed in a given time; where is the architect who can produce a work which shall be in every detail removed from the possibility of criticism? The Greeks, who certainly did understand architecture in a *divine* sense better than any other nation has understood it, were not compelled to deliver up their work, complete in so many months, as we are. It mattered little whether the Parthenon took ten months or ten years in building, so long as it *was* built. Time was no particular object then; but what is the case in these busy times, when expedition is the very essence of success, when companies are springing up in every direction, and when shareholders are impatiently awaiting a good percentage for their money? Buildings must be designed and built in so many months. As soon as a public building or railway station of importance is commenced, the public, desirous of being benefited by its accommodation, are clamorous for its completion. The architect, anxious to produce something which shall be better in design and accommodation, and which shall embrace more of the modern facilities for expedition than anything at present in existence, has scarcely time to keep the builder going with plans; and who is to blame him if he does occasionally make some small architectural slips?

THE FIGURE-DRAWING CLASS OF THE ARCHITECTURAL ASSOCIATION.

The above class is now in working order: eight meetings have been held, on Tuesday and Thursday evenings, at which the average attendance has been twenty. Above thirty members have joined the class, and the subscription of each one—the monthly expenses (amounting to 8*l.*) being equally divided amongst them—is very trifling. The class may consider itself fortunate in having secured the large room at the West London School of Art, in Great Portland-street—entrance 72, Bolsover-street. This room is, by its lighting and warming, and by the casts that it contains, well adapted to the requirements of the class. Mr. Poynter attends at least once a week, and has, up to this time, been present every evening. He divides the class into two portions, putting the beginners to casts and the more advanced students to the study of the living model. It is to be hoped that this class will be well maintained, until the scheme proposed by the Institute is fully carried out and made capable of replacing it. Mr. Tarver is the hon. secretary.

SCHOOL OF ART ACCESSORIAL TO ARCHITECTURE.

MEMBERS of Committee nominated to act with the President of the Royal Institute of British Architects in carrying out the objects of the proposed school.

Institute :—T. L. Donaldson, President; Owen Jones, T. Hayter Lewis, G. Godwin, F. P. Cockerell.

Members nominated by the Architectural Museum :—A. J. B. Beresford Hope, President; Joseph Clarke, J. Ruskin, G. Gilbert Scott, R.A.

Members nominated by the Architectural Association :—J. H. Christian, President; A. Ashpitel, W. Burges, E. J. Tarver.

COMPETITIONS.

Proposed Church, Pontypool.—In the late competition for proposed new church, Pontypool, a design submitted by Mr. Hancom, Newport, Monmouthshire, was selected, and the premium was awarded to him. Mr. Hancom has been instructed to prepare the contract drawings. Seventeen designs were submitted.

Bradford.—A design has been chosen in a select local competition for a Wesleyan chapel, intended to be built in Little Horton-lane. The style is Gothic, and the building will consist of a nave and aisles, organ-gallery, chancel, and minister's vestry. The front in Horton-lane has a central gavel, with a decorated vestry window, and at one side of this a spire rising to the height of about 130 ft. There is a staircase (one in the tower), and on each side of the entrance. The roof timbers are supported by iron columns, which are ornamented with tracery. The chapel is intended to accommodate upwards of 1,000 persons. The design has been prepared by Messrs. Andrew, Son, & Pepper, of this town, and will be carried out under their superintendence.

CONTINENTAL NEWS.

France.—Excavations recently commenced on the edge of a wood, about a mile outside the city of Lyons, have brought to light a number of objects which clearly prove, what was long suspected, that this was the site of a Roman camp. In parts, those engaged in this inquiry have gone down to a depth of 18 ft., and amongst the articles found, in a more or less good state of preservation, are rings, buckles, metallic mirrors, swords, axes, lance and arrow heads, fragments of helmets and shields. But few coins have as yet been found, all of which, with one exception, are of bronze, and of the time of Antoninus and Marcus Aurelius. The exception is a silver coin, with the "image and superscription" of Albinus, the rival emperor of Severus, and there is little doubt but that this was one of the camps of Albinus, previously to the battle of the Rhone, in 198. In this battle some 50,000 men were engaged on each side. Severus was conqueror, and Albinus was decapitated and thrown into the river.——Greuze, a painter of the end of the last century, is to have a monument at Tournois, in Burgundy, his native town, and it is to be erected at the sole expense of the emperor. Greuze was a *protégé* of Marie Antoinette, and fashion made him great and famous. But with the Republic came the change of his fortunes, and he died in 1804, in the greatest misery, neglected and forgotten. When the first Napoleon heard of this, he said, "Why was he too proud to come to me? I would have given him a ewer of the finest Sèvres filled with gold, wherewith to mend all his broken pitchers." This was in allusion to one of Greuze's most celebrated pictures, "The Broken Pitcher."——The subscriptions of the Béranger Monument are advancing satisfactorily: the committee is presided over by Baron Taylor, with whom are men like Ernest Legouvé, Havin Géroult, Dupont, and others.

Bavaria.—The old king seems again to have found out a spot where a monument ought to stand, for he lately undertook a trip to Harlaching, on "the banks of Iser rolling rapidly." It was here that Claude Lorraine lived for many years in a small château, which has, however, long disappeared, and now the great landscape-painter will have a statue or a monument on this spot.——The two towers of the Cathedral of Regensburg (Ratisbon) are to be restored and completed; and much of the work of restoration has already been done during the past year, when some 30,000 cubic feet of masonry were worked up. The south tower is completed as far as the foot of the spire, whilst the north tower has only reached the windows next above the transition from the square to the octagon. ——A sad accident occurred at Munich the other day. A new three-storied house, which was being erected in the new quarter near the Rondell, suddenly fell in about 11 a.m., burying a number of workmen under its ruins. Some escaped in various extraordinary ways, but seven men were dug out in a sadly mutilated state, whilst two were still missing, having been probably precipitated into the cellars. Bad materials and undue haste were the chief causes of the building suddenly collapsing.

BYZANTINE ARCHITECTURE ILLUSTRATED.*

THE collections and drawings of M. Texier, illustrating Byzantine architecture, have long been known in certain circles, and from these collections, with the able co-operation of Mr. R. Popplewell Pullan, best known in connexion with the Budrum Expedition, a sumptuous, learned, and valuable volume has been produced and published by Messrs. Day. It contains seventy plates, tinted lithographs, chromo-lithographs for the mosaics, and twenty-seven wood engravings. Of the latter we reproduce a few as serving to show the range of country embraced in the volume.

To follow as closely as possible the march of the new faith as it crossed the regions of Asia, and to traverse, with the Apostle St. Paul, the districts which were the first scenes of his preaching, they give a view of Perge (Fig. 1).†

In the first place, it is of importance to remark, that the apostle, instead of selecting some quiet village where he could preach in secret, chose for his first abode in Asia Minor, after leaving Antioch, this celebrated city of Perge, renowned for its worship of the Pergean Diana. This place was the flower of Pamphylia, a town rich with marble edifices, which still present the spectacle of the most splendid ruins a Greek town wonderfully preserved can offer for the investigation of the historian. Every step in the city (which seems to be asleep rather than deserted) reveals traces of the elegant and easy life of its former inhabitants.

Perge, or, as it is sometimes called, Perga, is situate on the Cestrus, a small river which joins the sea at the distance of a few miles from the town, and is encircled by strong walls flanked by towers. It stands at the foot of a hill, square in form, which was surmounted by the temple of Diana, in somewhat the same manner as the Acropolis at Athens is crowned by the Parthenon.

On the right of the gate stands as fine a theatre as ever was constructed by the inhabitants of a Greek town. It accommodated 12,000 persons easily. The marble proscenium, adorned with the richest sculptures, presents to the gaze of the spectator numerous representations of Olympic deities carved upon its pilasters and frieze. Two large divisions of steps encircled the *cavea*, which was crowned by a portico of the Ionic order. All the science of Roman construction, combined with the elegance of Greek art, is visible in this edifice.

Fig. 2 is a tomb cut in a pyramidal rock at Urgub. Our authors say,—

"We might give a hundred examples of chapels and tombs bearing the indelible stamp of Christianity; one, however, of incontestable origin, will be sufficient. In an isolated cone in the valley of Urgub, near the village of Marichian, there has been dug a tomb in the form of a chamber, about 16 ft. each way. In the ground there are sarcophagi; the walls are destitute of ornament, but almost the whole surface of the ceiling is occupied by a cross, with four equal arms, the three upper ones being surrounded by a nimbus. There is no doubt of the Christian origin of the tomb, as the cross forms part of its original decoration. The doorway has a horseshoe arch: this is a proof that this arch is of Byzantine and not of Arab origin."

The churches cut in the rock in the environs of Surp Garabed are remarkable. Fig. 3 shows the entrance-front of one of these, and Fig. 4 the plan of it. The rude mode in which the mouldings are cut does not allow one to ascertain from them the precise date; but their general character is that of great antiquity.

On the side of one valley there is a portico of three arcades sustained by massive Doric columns; the archivolts are without decoration; the rock above is scarped, so as to form a panel bordered by a simple band. Under the vestibule, open right and left two square chambers, measuring 10 ft. or 12 ft. in length. From thence we enter the nave, which is cut parallel to the valley. At the end is a semicircular apse with a stone altar cut in the body of the rock. The walls are ornamented with pilasters rudely indicated; the nave is covered by a vault; the light of day is admitted only through a small door and window. We pass afterwards into a smaller chapel, which is so dark that it must have been impossible to officiate without the light of candles. Its form is the same as that of the church; it has a nave, an apse, and a stone altar. But the congregation would have been suffocated in the chapel if they had not taken the precaution to carry a ventilating funnel to the surface of the mountain—a work of great difficulty to a people poor and without resources.

"It is possible that the second chapel was made for the purpose of concealing the sacred utensils, or fugitive Christians when pursued; for, if the entrance to the chapel were closed by a slab, it would be impossible to suspect its existence."

At Edessa they find constructions of the Byzantine epoch in the walls of the castle (Figs. 5 & 6); and the fountains all remain, they think, as in the days of Justinian.

The eye of the stranger entering Edessa is especially struck with the imposing aspect presented by the ancient castle, which stands on an eminence 100 yards high; the wall of which, scarcely breached by time, forms a most picturesque background. It is the same castle that was constructed by Justinian after he had destroyed the ancient and useless fortifications of

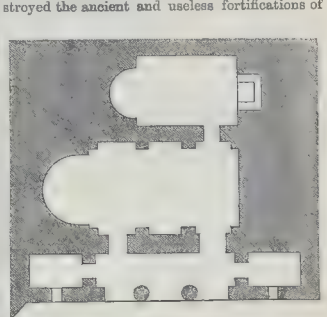

Fig. 4.

old Edessa. Its form is that of a parallelogram, of about 400 yards in length, by 200 yards in breadth. It is defended by several square and by two large semi-octagonal towers. The walls are not prolonged in a straight line, but form several projections; these form keeps or prisons, which overlook the vast enclosure of the town. There are two gateways to the castle,—that leading to the town, which still exists, which communicates with the interior of the place, and that leading to the country, which was closed by a drawbridge. The latter is at the western extremity of the castle.

The interior of the enclosure was occupied by the barracks and the arsenals, which still exist complete. The arcades of the great barrack have horseshoe arches, of the time of Justinian.

The moat of this immense work is not the least remarkable part about it. This fosse, as seen in the accompanying plan, included the three-quarters of the circumference of the castle; the fourth part is connected with the town. It is about 33 yards in breadth, by 22 yards deep.

One of the courtyards of the castle forms upon the side of the town a terrace, on which terrace were placed two columns, which still exist in a perfect state of preservation (Fig. 7). They are of the Corinthian order, and are placed about eight yards apart. The diameter of each column is nearly two yards. Each column consists of twenty-one drums of solid stone. It is evident that this monument has never been finished, for all the drums have projections on them, which have been used for raising and adjusting them. These capitals are surmounted by blocks of solid stone, which show that they were intended to have some further decoration, probably the statues of Justinian and Theodora.

Mr. Pullan says in his preface, and this will serve to show a leading intention of the book, —"We believe that its perusal will modify certain preconceived notions regarding Byzantine Architecture. Some authors affirm that

* Byzantine Architecture, illustrated by a series of the Earliest Christian Edifices in the East. By Charles Texier and R. Popplewell Pullan. London: Day & Son, Gate-street, Lincoln's-inn-fields. 1864.

Fig. 6.—Plan.

there was a school of Byzantine painting, but not of architecture; we shall endeavour to show that such a school existed. Others assert that the Gothic is the only veritable Christian architecture; we shall prove that Christianity did not last for twelve centuries without having discovered a monumental form of expression." In the chapter relating to the conversion of Pagan temples into churches, our authors give a series of monuments of various periods and countries, serving to show that the Christians, so far from entertaining feelings of hatred for Pagan buildings, as some persons have supposed, preserved and adapted them to Christian purposes. We have always entertained the opinion ourselves that this was the case, but others have thought differently; and to the removal of this opinion the illustrations given address themselves. Our intention on the present occasion is simply to announce the publication of the work, to afford a general idea of its scope and purpose, and to recommend the purchase of it by public libraries, and by those who are interested in the history of Early Christian art. In another article we shall go into the matter of the volume more fully, and discuss some of the opinions expressed in it.

THE MODE OF CONNECTING IRON COLUMNS IN TIERS.

If there were records of the different kinds of failures in buildings, considerable advantage might accrue: for, as much may be learned from a defective piece of construction as from an example or a precedent of ingenious contrivance. Little, however, has been attempted in the way of description or diagramatic illustration of the failures we allude to. In Wightwick's "Hints to Young Architects," may be found a few suggestions, with diagrams, respecting certain arrangements of structural work that should be avoided; and in Mr. Fairbairn's book on the "Application of Cast and Wrought Iron to Building Purposes," are some particulars of the failure of a mill at Oldham, from the erroneous construction and inadequate strength of the fireproof flooring. But the sum of what there is chronicled in order to warn off the young architect from the repetition of defective arrangements,—forms of construction likely to present themselves to him as sufficient,—is small. Generally, it is not easy to be acquainted with the occurrence of accidents which parties interested may be disposed to keep concealed. We are anxious, however, to present particulars of failures when sufficient information reaches us. We lay before our readers this week, illustrations of a failure that lately occurred in a certain form of connexion of the iron columns in the tiers in a flour-mill at Huntingdon. To these we add illustrations of the method which has been adopted for remedying the defect; and, for the sake of comparison, diagrams showing one of the several forms of connexion that have been used

elsewhere where the construction is fireproof, which that in the Huntingdon case is not.

The building wherein the failure to which we have referred occurred, is known as the New Mill, Huntingdon, and was erected for Mr. Potto Brown, under professional direction. The exact dimensions of the structure are not reported to us; but they are unimportant to our present object. The dimension one way, however, between walls, was 38 ft. 9 in.; and this breadth was divided on plan, by two rows of iron columns, into a centre bay of 13 ft. 9 in., and two side bays of 12 ft. 6 in. each, the measurements being taken from the lines of the centres of the columns. The flooring was of wooden girders and binders, carried by the columns in the manner shown at the top of page 918, in the two sections. These, with the plan, show also the nature of the failure which ensued. (Diagrams 1, 2, & 3.)

Great strength in walls, or sufficient tie between opposite walls, is of the utmost importance in buildings for storage where, as in the case of grain, all particles that are above and outside of the lines of simple repose, forming the sides of a pyramid or heap whose base-line is the floor, press directly upon the walls. The walls must be of extra-thickness; or they must be counterforted, or tied, at short distances in the height, as by keeping the floors of moderate height. In the Huntingdon mill, the continuity of the girders passing through shoe-heads of the columns, is most serviceable to the object of tie between the walls; but in providing this, the architect so designed the feet and heads of the columns that are connected, that the line of downward pressure was broken: cross-strain was thrown upon a portion that was left weak, of the foot of each column; and failure was the result.

There are eight stories in the mill, varying from 10 ft. 9 in. to 9 ft. in clear height. In the three lower stories, which are 10 ft. 9 in., 10 ft., and 9 ft. in height, counting upwards, the walls are 3 ft. in thickness. Each of these floors, or including the basement, is appropriated to machinery and corn, the flour in sacks also being in the basement. In the fourth story, 10 ft. in height, the floor is loaded with corn-dressing machinery, which is as heavy as corn; and the floor next above, where the story is 9 ft. in the clear, is loaded with corn exclusively, as are the two stories, 9 ft., and 9 ft. 6 in. next above; and as the top story, 9 ft., called the stage floor, may be. The fourth and fifth stories have walls 2 ft. 7½ in. in thickness, and the three other stories, walls 2 ft. 3 in. It will be seen that each bottom column might have to sustain about 60 ft. in height of wheat. Or if we regard the columns of the second story from the ground, as those in which failure from insufficient support would be most likely to manifest itself, the load may be taken as 50 ft. in height. The superficial area sustained by each column, thus loaded, has been given to us as averaging about 120 square feet; though that would seem within the proper figure. The best wheat weighs, we believe, about 54 lb. per cubic foot; or, we may say, half a hundred-weight. Taking the 120 ft. as the superficies, and the 50 ft. before mentioned as the height, and multiplying the one by the other, and the product by the half-hundred-weight, we get 3,000 cwt., or 150 tons, as the weight on each of the columns of the story lowest but one, without taking in the weight of the floors and columns above that story.

The result was that nine of the columns in the mill gave way at the base, in the manner shown at A A in our diagrams at the top of the page, even when the floors were only partly loaded. It was not deemed prudent to entirely load the floors. Beyond the obvious disadvantages of such a condition of things, the failure was annoying, inasmuch as the mill had been erected with the intention of its forming a gift, or bequest, in place of money.

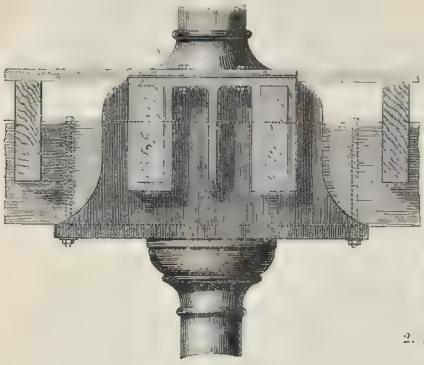
Methods of remedying the defects were considered. It was first proposed to pack up the space shown vacant in the section, or between the top of the girder and the foot of the column, with hard oak wedged in. The space seems to have been originally left vacant; but supposing it had been otherwise, the mere shrinkage of the timber would have taken away the support, and would have left the cross-strain which had been incorrectly allowed to be exerted upon the base, to produce the fractures that are shown. Any wedging, even with iron, would still not have provided for the shrinkage in the girder.

Two alternative methods of construction were open to selection on making the design for the building. One of these, which is only mentioned because it could not have been followed by these particular defects, would have been to set the bases of the columns directly upon the girders; so that the latter, and not any box-heads to columns below, would have carried the columns above. Of course, by that arrangement, each column and floor would have sunk in some degree, and the top floor and roof the most of all. But the safety of the structure could scarcely have been compromised as it was by the arrangement which led to positive fracture. In the event of fire, indeed, in such a structure, the whole of the tiers of columns and the roof would have gone with the floors. We apprehend that the method of construction just described has been followed in numerous cases. The other alternative would have been to make the shoe or box-head, at the top of the column, with its sides much closer together, or so that they would have fallen directly under the sides of the one column and above those of the other, some provision being made for the projection of the bases and capitals, so that the former at least should be a source of strength instead of weakness; and it might have been necessary to bear in mind here the objection to unequal thicknesses of metal, on the score of their different rates of cooling. By the alteration suggested in the box-head, the girder would have been weakened as a tie. But it might have been bolted through horizontally, with the ends of the shoe; or some tie, supplementary to the diminished girder, might have been devised. Or a couple of girders might have been substituted for the one, and carried by brackets from the lower column, the lines of direct downward pressure and connexion of the columns being between the two girders. However, this pressure not having been provided for, without the interposition of parts subject to cross-strain, by the continuity unbroken, of a material nearly incompressible, as iron is by ordinary weights, it became necessary to supply the omission, or make up the continuity, by some insertion of iron. To manage this without the removal of the columns and girders, or in short, that of the entire internal structure of the mill, was of course the difficulty. The matter had by this time been placed in the hands of Mr. John Fowler, the civil engineer, of Westminster. We may observe that the diagrams showing the original construction, and which were the best we could procure, do not seem quite accurate in some points; and it is not easy to tell how the binders which are carried by shoes cast on the larger shoes or box-heads, would be fixed. But the defect which it has been our object to illustrate is exhibited clearly enough.

The arrangement designed and carried into effect by Mr. Fowler, for making up the continuity of downward pressure and restoring the feet of the columns, is shown by the two sections (4 & 5) and the small plan that are below those we have already referred to. Premising, here, that temporary wooden supports to the beams were first put in on each side of the iron columns, we may say that the timber girder passing through the box-head of the column, in each case, was chased or mortised out in the centre, for a width of rather more than 4 in. as shown by one section,—and sufficiently, or as shown by the other section, in the length and in form without materially weakening the girder, to allow the casting designed to support the upper column (and shown separately in plan) to be introduced, and placed in its proper position. This casting, perfectly sound, and of the dimensions figured, was planed on the upper surface to an incline or taper of a quarter of an inch in 21 inches; and a groove was cut in the centre, from end to end, as shown in the sections. For the planing, a planing-machine was brought to the building, and was placed during the progress of the work, where power from the engine could most conveniently be had. The casting mentioned was carefully seated on a piece of sheet-lead of 6 lb. to the foot, 17 in. long and 4 in. wide. The packing between the top of the casting and the foot of the column above, was made up of a piece of sheet-lead, a wrought-iron plate 17 in. long, 12 in. wide, and 1½ in. thick, set true and flat, and a wrought-iron or steel wedge, 6 in. wide, and of sufficient length to extend beyond the plate and casting 1 in. at each end when driven to the permanent position. The upper surface of the wedge was made quite flat, whilst the lower was planed to the taper required, and determined on the spot by actual fitting of the wedge to its place in each separate case. Two pins were fitted to the lower surface of this wedge, which just fitted into the groove planed in the upper surface of the supporting piece: thus the wedge could be exactly guided into its place.

The work of inserting the several supporting castings, plates, and wedges, and the lead-packings, was commenced at the bottom of the building, the temporary wooden supports being left in the floors above. By screw-jacks, the floor above was lifted just sufficiently to allow the wedge to be properly fitted, and previous packing to be removed. Then the casting, plate, and lead, being inserted, the wedge was driven well to its place. The screw-jacks were then removed, and the floor-boards made good. The work was thus proceeded with till all the columns requiring support had been treated in the same manner. In addition to the supports described, however, it was necessary to fit new bases to some of the columns.

For this we do not find that the columns were removed. The bases of the columns requiring the renewal were carefully cut away; and, according to one account, the new bases were inserted, making sure that there was a perfectly true surface of contact, metal to metal; which being insured, a wrought-iron hoop was tightly fitted over the joint.



We have appended to the diagrams to which we have referred above, others which illustrate one of the arrangements which may be adopted for the connexion of columns in a tier, preserving the continuity or direct downward pressure, and preserving also tie between the walls, in the case of a building which is fire-proof. The arrangement represented is that used in the City Flour Mills, in Thames-street, the lofty brick building, which since 1850, or 1851, has marred the prospect of St. Paul's Cathedral from Blackfriars Bridge. The building itself is, however, very well constructed. The columns and flooring were designed by Mr. F. J. Bramwell, civil engineer. It will be seen that there would be a nearly perfect continuity of the downward pressure, — from the manner in which the upper column is set directly upon the lower one; and that whilst the girders tie in the walls, and are attached to the tiers of columns, they might be removed, leaving the columns, and with them the roof, standing. The little "clearance"-space left between the top of the girder and the foot of the upper column, is a feature to be noted: it prevents any action of the girder, when the latter is deflected, from touching the column, action such as in the case of the binders in the Huntingdon Mill, may have helped to the fracture of the base-plates by bending them upwards. We should draw attention, however, to that part marked A, of the lower column, as seeming to be not absolutely free from the defect which there is where any portion of the casting is subject to cross-strain, instead of to simple compression. In the execution of the work, the bases of the upper columns were faced and bored, and the tops of the lower columns were faced and turned on the horizontal bands. These bands, in each case, had four openings, or chases, down them, into which keys were driven to adjust the ends of the girders which embraced the head of the lower column, the openings serving as rough key-beds or guides for the keys. A column was first erected: on this were placed the ends of a pair of girders, the other ends of which were carried by the walls; the portions projecting at their sides, of the girders, were united as shown in the diagrams, by wrought-iron hoops shrunk on; the head of the column, and the girders, were then adjusted by the keys; and then the upper column was put on. The flooring, of Valentia slate, is carried on wrought-iron joists which are let into pockets on the girders, every other joist being fastened by a pin into the pocket.

There are, we need hardly say, other arrangements in use, for the connexion of iron columns in a tier, preserving the continuity of the bearing or pressure, and for the connexion of the flooring with the columns. In some cases, besides the girders transversely, as in the City Flour Mills, there will be a line of girders corresponding on plan with the line of the columns. Then the flooring, on plan, would be divided by the girders, or in a building of considerable extent, into large squares,—a column being at each angle of a square. In that system of construction, the end of each girder is attached by screws and nuts to the two girders next to it, at the meeting parts, which would be on the diagonal lines corresponding with those which we have marked BB in the plan illustrative of the City Flour Mills arrangement.

THE BUILDING TRADES

The Birmingham carpenters and joiners feel much aggrieved with the "discharge note" of the master builders, and we think they have good grounds for it. No doubt, the masters have been instigated by the doings of the men throughout the country; but although, in some cases, the men, in their endeavours to make themselves as independent as possible of the masters, have struck out wildly, and shown a disposition to be masters themselves rather than servants; still there is no doubt that the masters, by resorting to such a measure as the discharge note, are only giving countenance to the idea that they *are* inclined to tyrannise over the men and to place them entirely at the mercy of any capricious or spiteful person, in the rank of master, who may desire to enslave his men. We would, therefore, put it to the masters as a class, whether they do not think that the already serious enough differences between the employed and the employers are likely to be greatly aggravated by such a mode of procedure, especially considering that it is the idea however perverted or mistaken—of a *supposed* undue and enslaving power of the masters already over them, which has led to protracted struggles, and to great evils, both to master and to men.

A large meeting of the carpenters and joiners of Birmingham has been held in the Odd Fellows' Hall, Temple-street, to consider the proposed discharge note. The hall was crowded. Mr. Price occupied the chair, and in opening the meeting explained that the "note" proposed was to be given to a man on leaving his master's employ, and was to state what the man's character was, what his wages had been, and the cause of his leaving. The members of the Master Builders' Association had pledged themselves not to employ a man without one of these satisfactory "notes." Mr. Bruton moved,—"That we, the operative carpenters and joiners of Birmingham, express our intense regret that a notice has been issued by the masters who belong to the Master Builders' Association, stating their intention of issuing a 'discharge note' on and after January 1, 1865; and we further pledge ourselves to oppose it to the utmost." The resolution was unanimously carried. Mr. George Dalton moved,—"That we, the carpenters and joiners of Birmingham, determine not to resume work until the Masters' Association come to a perfect understanding with our committee in respect to the 'discharge note,' and pledge themselves not to introduce it at any future time." Mr. John Michael moved, as an amendment, "That the operative carpenters and joiners of Birmingham do give notice to the masters whose names are appended to the notice respecting the 'discharge note' placed in the shops on Saturday, that, unless the said notice be withdrawn on or before Monday next, the 12th inst., the men in their employ will strike." For the amendment nine hands, out of as many hundreds, were held up: and the resolution, to the effect that the men would not resume work, was carried with loud cheering.

Two brickmakers, Slater and Cheetham, have been sentenced, at the Manchester assizes, to penal servitude for twenty years, for a murderous assault. There was a strike among the brickmakers at Roddish, and the prosecutor in this case went to work before the strike was finished. Five men, among whom were the prisoners, came to him when he was alone one night, and beat the poor fellow in the most cruel manner, leaving him for dead.

The following, among other remarks on strikes, were made lately by Mr. Justice Byles:—"Is not the mode of adjusting disputes between men and masters by means of strikes very barbarous in a free country like this? I say this because in a neighbouring country there are courts regularly formed, consisting of masters and workmen in small numbers, for the adjusting of their disputes. They have found means of obtaining a satisfactory reference of those points on which they disagree; therefore, what I address to you is not mere speculation. I cannot help thinking that, if some such courts were established in some such trades as you have here, great good might result. Generally speaking, the respective representatives of such bodies on both sides might agree; but where they do not, I think it would not be impossible to find a referee of practical knowledge who would command the attention and secure the respect of both sides. The arbitration should have (as now awards under the Acts for the arbitration of workmen's disputes) the force of law. Nor does it seem to me to be any infringement of the principle, because if a man makes a contract for six months, the law enforces it; and, if that is so where the contract is made directly, why should it not be also where the contract is made indirectly through a referee? I believe there are very few subjects more deserving of public attention than this, especially in this country and at this time. Although I rarely venture to say anything on these subjects, yet this is a topic suggested by the contents of this calendar, and I suggest it to your special attention."

FROM SCOTLAND.

Edinburgh. — The designs for the national memorial of the late Prince Consort have been handed in to the committee. It is supposed they will be deposited in the National Gallery, and that finally the public will have an opportunity of inspecting them. Mr. Cousin, the City architect, sends in to the committee an elaborate design, after the model of a Greek temple, to be erected on the "ridge running N.N.E. from Arthur's Seat, and about 540 ft. above the sea." Concerning the site and the design, Mr. Cousin writes,—"The site in question has been much animadverted on in the public prints; and were the memorial restricted to sculpture alone, there might be some force in the objection; or were it proposed to erect an obelisk or other tall upright structure, such as the Scott Monument, so admirably adapted to its situation in Princes-street, the objection would perhaps have still greater force, such structures being entirely out of harmony with the general contour and grouping of such mountain scenery as that of Arthur's Seat. On the other hand, nothing could be more appropriate as a site for a temple of the pure Greek form." Such a monument so placed would be seen to great advantage from Princes-street, the North Bridge, as well as from many other parts of the city, from Holyrood, from all parts of the surrounding districts of the country, and from the Firth of Forth, as far as the eye can reach, forming a leading feature for the eye to rest upon, and giving a classical expression to the scene, and a further warrant to our fair city for being named the Modern Athens."—— In the National Gallery improvements have been made, both in the altering of the arrangement of the pictures formerly in the gallery, and by the exhibition of several important new acquisitions. The "Scott Drawings" consist of nearly fifty water-colours, by some of the most eminent English masters, bequeathed to the trustees of the National Gallery by the late amiable John Scott, of the well-known firm of Messrs. Colnaghi, Scott, & Co., of London. This series of drawings comprises, water-colours by Danby, Girtin,—one of the founders of the English School of Water-colour Painting,—Collins, David Cox, Roberts, Lewis, Cattermole, P. Derrint, J. D. Harding, Joseph Nash, Knell, Callow, Fripp, Elmore, and several other distinguished artists; as well as pencil drawings by Patrick Nasmyth, William Dyce, Sir Edwin Landseer, and Samuel Prout. Among the most remarkable of these drawings are those by Joshua Cristall, born at Truro, in Cornwall, in 1768, and one of the founders of the original Society of Painters in Water Colours, in 1805. ——The Edinburgh Workmen's Houses Improvement Company (Limited) have held their third annual general meeting. The report congratulated the shareholders on the completion of the two rows of houses at Dumbiedikes, containing 132 separate tenements, provided with every convenience necessary for a family. These houses had been built at a cost of upwards of 19,000*l.*, and were now all occupied by respectable tenants, at rents ranging from 9*l.* 10s. to 12*l.* Several of the houses had been sold at a moderate profit, at prices varying from 150*l.* to 185*l.* It was the object of the directors as much as possible to encourage the tenants to purchase their houses. The houses having been only partially occupied during the past financial year, the revenue appearing on the present account did not represent what might fairly be anticipated, now that the houses were fully tenanted, and the company in fair working order; yet there was a net surplus for the past year of 709*l.* 3s. 4d., which the report recommended to be applied in paying a dividend to the shareholders at the rate of 4 per cent., leaving a balance of 61*l.* 12s. 4d.

Roberton (*Selkirkshire*). The church which has been erected by the heritors of Roberton parish, in the county and presbytery of Selkirk, was opened on the 20th ult. Mr. Rhind was the architect. The site was given by the late Mr. George Pott, of Todrig.

Burntisland: Sewerage and Waterworks.—Since the completion of the contracts for the sewerage and waterworks for Burntisland, in Fifeshire, Scotland, various improvements and extensions have been found necessary to bring them to a state of efficiency. It would appear that this object has been accomplished. The outlay on the sewerage works amounts to 3,357*l.*, which sum, except 700*l.* borrowed, was received from the town council. The waterworks have been executed at a cost of 2,453*l.*, the sum of 1,400*l.* having been advanced by the town council, and 1,050*l.* borrowed by the commissioners.

PROVINCIAL NEWS.

Ipswich.—It is proposed by the Freemasons of this locality to erect a large Masonic Hall, capable of affording accommodation to the lodges of other societies, and of being at the same time of service to the public as a music-hall and a place for large public meetings, on a site in Brook-street.

Coventry.—This city is making progress in street architecture, by the erection of several new buildings in its main thoroughfare. One of these—the best and only stone front of modern date—has just been completed in High-street for a general carpet and furnishing warehouse. The building consists of five flats, each comprising a single room, the lower room being devoted to the storing of mattings, floor-cloths, druggets, &c. The floor is composed of cement, and the room is lighted by means of two patent daylight reflectors. The ground-floor, or shop, has two good-sized windows for the display of goods, and is entered by glass folding-doors. The first-floor is the carpet-department, and is approached from the shop by an oak staircase, of great width, the newells and banisters being of carved ornamental oak. The three upper stories are severally devoted to carpets, rugs, bedsteads and bedding, &c. The front of the building is composed of stone pilasters and carved capitals, from whence spring semicircular carved architraves and key-stones, the upper windows having stone columns and carved caps. The whole front is of Venetian architecture. The architects were Messrs. Nevill & Son, and the builder Mr. J. Marriott.

Kidderminster.—An extensive worsted mill, the property of Mr. Thomas Lea, of the Larches, is now approaching completion. It is erected on a site between the canal and the works of the New Cotton Spinning Company, and is to be called "The Sling Mill." The building was commenced in July, 1863, from designs furnished by Messrs. Lockwood & Mawson, architects, Bradford, and the work has been executed by Mr. Purnell, builder, Rugby. The mill and warehouses are built of red Staffordshire brick, with blue and white strings and arches over the doors and windows. At the western end is a chimney 180 ft. in height, and this is near completion. The mill is 195 ft. long, 50 ft. wide, and 80 ft. to the top of the roof; and there are four floors besides the ground-floor, the top one being lighted by skylights; and there are upwards of 200 large windows in the mill besides. The warehouses adjoin, and these buildings are 144 ft. long by 26 ft. wide. There is also a dining-hall for the use of the workpeople, 57 ft. long by 26 ft. wide. Two engines of 40-horse power each are being fixed, and the machinery will soon be introduced. The works will cost, with machinery, &c., nearly 50,000*l.*

Worcester.—The extension of the new engine works, at Shrubhill, is being rapidly carried on, under the superintendence of Mr. Wilson, the company's engineer. The embankment on the left of the passenger station is being carried away, and the soil will be deposited in the valley in the rear of the workhouse. The embankment near the Newtown-road Bridge is cut through. A great portion of the deep valley will be filled up, and on the site will soon be commenced a capacious goods station, for the Midland Railway Company, who purchased the land some time ago for this purpose.——Messrs. Woodward's renovated establishment, opposite the Old Bank, according to the local *Herald*, has been uncovered by the removal of the scaffolding. The house, being now in a recess, breaks up the long monotonous line of straight-walled houses and square-headed windows, and its removal back 5 ft. 6 in. is the first instalment of a desirable widening of the street at that point. There are

three stories, the lowermost being an entire frontage of shop-window, except the central doorway. The second story is lighted with Gothic pointed windows, or, rather, a range of arcades; and the top story is also furnished with pointed and transomed windows, those in both stories having quatrefoils in the head tracery; the whole terminated with three gables and pierced barge-boards. Mr. Perkins was the architect.

OPENING OF CLIFTON SUSPENSION BRIDGE.

BRISTOL has been holiday-making and rejoicing in the long looked-for opening of the Clifton Suspension Bridge, on Thursday in last week. This bridge, as our readers are aware, has been formed out of the old Hungerford suspension bridge at Charing Cross. But although the Clifton Bridge has been completed in December, 1864, its foundations may be said to have been laid in December, 1753—more than a hundred years since—when 1,000*l.* were given by Mr. William Vick to the Society of Merchant Venturers, to be placed at interest till it amounted to the sum of 10,000*l.*, when it was to be applied to the construction of a bridge over the river at Bristol. Vick contemplated the erection of a stone bridge at Rownham ferry. An iron bridge, however, was thought preferable, and in 1830, when 8,000*l.* had been accumulated, plans were advertised for, and Telford was ultimately commissioned to prepare a design; but the estimated cost was no less than 52,000*l.* An Act of Parliament was got, and new designs were obtained from Brunel, Telford, and other engineers; but still something like 50,000*l.* seemed to be requisite. Mr. Davies Gilbert gave his advice, and Brunel's plan was agreed upon. Telford would have had the bridge supported on gigantic columns, reared at great trouble; but his more daring rival determined to make the cliffs support the structure, and he estimated the entire cost of the construction at 57,000*l.* Fortified with their design, which was satisfactory to the majority of the inhabitants of the city and neighbourhood, the trustees, in 1831, determined to commence the all-important undertaking, the Society of Merchant Venturers having given the land necessary on the Clifton side of the river, and Mr. P. J. Miles the stone from the quarry at Leigh necessary for constructing the pier at that side of the river.

The first stone was excavated, but the Bristol riots put the arrangement out of joint, and little was done till 1835, when wire was in the ascendant as the projected material of the bridge, and 35,000*l.* the estimated cost. Mr. Brunel then modified his scheme, but the Bristolians were not satisfied. Still the preliminary works were in progress; a wire was stretched across the river; and the foundation of the Somersetshire buttress was laid when the British Association visited Bristol. In 1837 the contractors became bankrupt, but in 1840 the buttress was completed, and in 1843 the money was all spent, 45,000*l.* having been realised and disposed of in massive piers, &c., ere one-half of the iron-work for the bridge, flooring, toll-house, &c., were executed, and 30,000*l.* more were requisite to finish the work. In 1853 the works ceased, and the undertaking was for the time abandoned. For seven more years matters remained *in statu quo*, when the idea of using up the Hungerford Suspension Bridge was entertained, after Lieut.-Colonel Serrell, C.E., of the United States, had offered to complete the bridge with wire for 17,000*l.* It was in 1860 that Mr. W. H. Barlow and Mr. J. Hawkshaw were consulted, and gave a favourable opinion as to the use of the Hungerford materials; and it is from these materials the bridge over the cliffs has at last been completed. The materials were purchased for 5,000*l.* The total cost of the bridge has been nearly 100,000*l.* The bridge is 30 ft. wide, the iron-work weighs 500 tons, and the bridge has a span of 703 ft., the largest of any chain-bridge in the world. The engineers who have completed the bridge, though it may be said to have been designed so many years ago by Mr. Brunel, are Messrs. J. Hawkshaw and W. H. Barlow, the resident engineer being Mr. T. Airey. When viewed from the river, or from Clifton Down, the chains are more like threads than the substantial supports of a bridge on which it is estimated 8,000 persons might stand without the slightest danger to the structure. A view and details will be found in a previous volume of the *Builder*.

The purchase of Leigh Woods, the beautiful and favourite resort of the citizens, to which the bridge leads, has been concluded. The sum to be paid is 40,000*l.* The property is to be held in the hands of two trustees until the whole amount is cleared off, and afterwards in behalf of the purchasers. The capital to be raised is 50,000*l.*, of which 26,000*l.* have already been subscribed. A primary condition of the agreement is the preservation of the hanging woods, including Nightingale Valley, or a space of 64 acres, from building purposes.

CAMBRIDGE ARCHITECTURAL SOCIETY.

ON December 1st the Rev. W. J. Beamont read a paper on "The Requirements of English Church Architecture in the Nineteenth Century." He commenced by explaining the object of worship, and showed that it was essential that the clergyman should be in such a position as to be both seen and heard by the people, as he was leading their devotions, praying *with* them, not *for* or *to* them. He then entered into a description of the forms of many ancient churches, showing that as far as plan was concerned almost any form that could be adopted would have some precedent; and showed how many advantages might be obtained from having a large central polygonal or circular space covered either by a dome or lantern. The former he should wish much to see attempted in Gothic work, as it was a very beautiful form, and there seemed to be no definite reason why it should be so rigidly excluded. He strongly advocated that churches should be made as light as possible, and would prefer mural-painting to window-painting, as the latter tended to diminish the light.

THE DEMOLITION AND REBUILDING OF DWELLINGS FOR THE POOR IN LIVERPOOL.

THIS important subject came before the town council last week, when the first report of the medical officer under the new demolishing powers of the Council was made. Mr. Bowring then directed the attention of the council to the necessity for replacing the dwellings to be demolished. Under the report referred to, he remarked, thirty courts were to be dealt with; ninety-one houses were reported, in the opinion of the medical officer, as such as ought to be demolished; four were to be structurally altered; and 150 filthy privies and ashpits were reported as to be destroyed. Action such as that now contemplated could not but be fraught with an immensity of good. It would open out vile spots and remove malignant sores from which Liverpool had been suffering so long; and the committee hoped that letting light and air into those courts and places from which both light and air had been so persistently excluded, would do a very great deal of good, both to the physical and moral health of the population. But for this good—for this permanent benefit, as he hoped it would turn out to be, for the inhabitants—a temporary evil would have to be sustained, *and would have to be met*. According to the usual average of inhabitants of houses, 619 persons would be thrown out of their habitations by the step which was now suggested. It would, therefore, be desirable that some arrangements should be made, if possible, in order to provide against the very great evil of pressing people who were so thrown out of their habitations into the remaining houses in the neighbourhood. He hoped that the Council would heartily join in passing this resolution of the Health Committee, which he now proposed:—

"That the Council be requested to instruct the Finance Committee to afford every possible facility for the erection of model cottages for the labouring classes on land belonging to the corporation available for the purpose, such cottages to be erected to the satisfaction of the council; and also to instruct the Finance Committee to use their best exertions with the owners of land in the vicinity of the borough, and with railway companies having stations in the town, for the erection of suburban dwellings for the above classes, and conveying workmen by railway to and from their work at cheap prices."

A smart discussion ensued, in course of which Mr. H. T. Wilson recounted the various instances in which the poor had been driven out of their dwellings. Firstly, he remarked,—

"There was the Act of 1843, which closed all cellar dwellings in courts, and all cellars less than 7 ft. in height; this, up to 1846, had displaced about 3,000 families. Then came the more stringent provisions of the Sanitary Act of 1847, which emptied 5,000 more cellars, and dispersed 20,000 persons within a period of less than two years. Since that we have had in operation the Improvement Bills of 1858 and 1861, which destroyed 321 houses; and we are now about to apply for another Bill which will remove 191 more houses. Then there is the new Sanitary Bill for rectifying or demolishing ill-ventilated courts and alleys, under which a vast amount of cottage property will be destroyed. The railways also, the London and North-Western and Lancashire and Yorkshire, now occupy by their roads, yards, sheds, and stations, the sites which once teemed with population. But probably the most extensive agency in dislodging the artisan has been private commercial enterprise, which has erected warehouses, manufactories, offices, and shops, in the central and lower districts of the town, on localities previously possessed by cottage property. The change is of an extent and magnitude sufficient seriously to jeopardise the health and comfort of the labourer, and therefore worthy of our most earnest consideration. Now, let me ask, 'what has been done to meet this vast dislocation of our labourers from their homes?' I will not say, done in compensation, but in mitigation of the unavoidable hardships of his position. I regret to find that our predecessors in the Council took no prominent action to remove the difficulties to which I am now referring."

Mr. Picton reprobated the idea of converting the Council into a charitable institution for the supply of dwellings, or into a speculative building society either,—forgetful, we fear, that the Council were here not merely neutral or passive spectators in this business, but active demolishers of the dwellings of the poor, which, surely, it is their duty to see replaced; and as to charity, that this is not what is called for, nor speculative profit either.

Mr. Bowring said,—

"He never intended the corporation to 'give' the land. The overcrowding was due to the architects and builders. The demand had been active, while the supply had been sluggish. Who were the proprietors of the tunnel middens? Who were the proprietors of the houses in which miserable people lived from year to year? He asked Mr. Picton to answer that question, for he knew well who the owners were. Mr. Picton had asked why they did not build houses of 70*l.* or 80*l.* a-year. They had never destroyed a house of that value, but they had destroyed the houses of the poor, and they asked the council to put the working man in a position to house himself—not a charitable act, but merely a friendly act of assistance."

The resolution was withdrawn, and an amendment was passed referring the subject to the Health Committee to report what might be advisable.

THE INSPECTION OF FOOD.

ENORMOUS quantities of unwholesome meat are still seized every week in some of the metropolitan markets,—a natural result of strict inspection in the City. The infliction of heavy fines, and, in certain cases, the imposition of imprisonment with hard labour, tend to drive the nefarious sale of poisonous food into other districts of the metropolis. In drawing occasional attention to this subject, we have always maintained that, besides the markets, it is necessary for the shops, especially in the poorer neighbourhoods, to be most carefully looked after by the parochial authorities. It is satisfactory to notice that the medical and other health authorities of Islington appear to have set to work in earnest; and the good example will not be lost in other districts; for, whether willing or not, the local authorities will be forced in self-defence to protect themselves from the impurities which will be driven out of Islington. In this way there is a wide field for work; and we would especially direct attention to the goods offered for sale by the costermongers in the Brill, New-cut, Leather-lane, and other markets, to the sausage and pie shops, to the dealers in pickled and other pork, Ostend rabbits, Irish bacon, and American cheese. The dealers in tripe, ox and sheep's heads, &c., should not be overlooked any more than the ordinary butchers, and the surveying of those places should not be confined to the parts of the premises which are exposed to the public view, but should also be extended to cellars and other parts of the premises. We have long known that the evil of the sale of poisonous food is of gigantic extent, and extensive inquiry will show this. Only recently a case in point under the Amended Nuisances Removal Act of the present year, has been brought before the Clerkenwell magistrate. The charge was that William Johnstone, wholesale pork-pie and sausage-roll manufacturer, of Essex-street, late Lower-road, Islington, had on his premises a large quantity of meat which was unsound, unwholesome, and unfit for human food; and further, that his bakehouse was in a dirty state, contrary to the provisions of the recent Act for the regulation of bake-houses. Mr. Dunham, the inspector of nuisances, gave a most unpleasant account of some of the matters found in these premises; and Dr. Ballard said that the meat (which consisted of pork and veal), "showed spots of hemorrhage, and the fleshy pieces large and extensive extravasation of blood, mostly on the inner side. These are

the appearances which are met with in hogs which have died of the disease variously known as hog typhus, hog cholera," &c.

Mr. Barker, the magistrate, considered this a very bad case, and fined the defendant 15*l.* for the unwholesome food, and 1*l.* for the dirty bake-house; and told him that if he came there again on a similar charge he would not get off so easily.

A few more prosecutions of this kind will prove of great advantage to the poor, and will show dishonest dealers who would disguise and sell poison, that they will not be allowed to do so with impunity.

METROPOLITAN BOARD OF WORKS.

THE THAMES EMBANKMENT.

At the usual weekly meeting of the Board, Mr. Samuda asked the solicitor for information respecting the powers of the Board under Contract No. 1 to enforce the due progress of the works.

The Solicitor replied that if the works were not carried on with due diligence, the Board was authorised to take the works out of the contractor's hand, and employ persons and procure materials for the completion of the works. The Board had power, under the circumstances referred to, to determine the contract, and take possession of the works and plant, to have the works completed. They had power, also, to enforce a penalty of 100*l.*

Mr. Samuda said he thought the time was arrived for taking active measures to insure the due fulfilment of the contract. The contract was for 520,000*l.*, and there was a clause to perform the whole of the work in two years and a half. One year had already elapsed, and the whole sum received by the contractor only amounted to 60,000*l.* It would take eight years to complete the works if the progress should continue to be as slow as up to the present time.

The engineer read letters addressed by him to Mr. Furness, respecting the slow progress of the Embankment works, and a letter in reply from Mr. Furness, explaining the causes of delay.

After some discussion, a resolution was passed to the effect that the contractor having failed to carry on the works with due diligence, as required by Contract No. 1, it be referred to the Thames Embankment Committee to report to the Board the steps necessary to enforce the more speedy execution of the works.

Two letters have been published by the Thames Conservancy Commissioners as to the Embankment. They relate to the material now being dredged from the river, and which the contractors for the Embankment say is not suited for the filling in of that work. Mr. Joseph Cubitt and Mr. Nathaniel Beardmore are the writers of the letters, and they declare that the material is the best that could be used for the purpose, but that it is wasted by the manner in which it is thrown into the river.

KING'S CROSS STATION.

Sir,—The Great Northern Railway Terminus at King's Cross is, I think, both in its construction and external design, well suited to its particular purpose; but why should its general effect be so shockingly marred as it is by the unsightly *close-boarded fence* next the pavement, which has so long remained in front of and shut out all view of the building? The insertion of this query in your journal will, I am sure, do much towards the removal of such a slur on the taste of the directors of the Great Northern Railway.

G. W.

ACCIDENTS IN LONDON.

It appears to me that some of the causes of accidents referred to in your number of Saturday, might be prevented by the interference of the police. For instance, the ill fastening of the plates in coal-holes, boys riding behind carriages, the omission of inhabitants of houses to sweep the pavement in snow and frosty weather. Why are not the police on duty instructed to see to the observance of the law, and enforce the penalties for infringement? We seldom or never hear of the police summoning parties for neglects or omissions, and why not?

C. J. Palmer.

LIST OF NEW BELLS.

It is the practice now, and has been for some time past, to publish in divers periodicals an account of the many painted glass windows set up in our churches throughout the length and breadth of the land, most of them under the name of "memorials." Surely there is no reason why the same publicity and report should not be given of new bells, whether a whole peal or a single bell restored: on the contrary, it seems very desirable. They are all either gifts or the joint productions of divers contributors, and are of far greater intrinsic value than the most costly windows, and perhaps more durable. It must, therefore, be gratifying to know that attention is being called to the long-neglected state of our towers and bells; and it is hoped that this feeling will increase. With a view of helping on such a movement, I send you a list of bells supplied by the three principal founders in the year 1863: it may tend to bestir others to do the same.

E.

New Bells supplied by Messrs. Mears, of Whitechapel, London, in 1863.

SOUTH LONDON WORKING CLASSES INDUSTRIAL EXHIBITION.

Sir,—I have read with some attention the remarks made by yourself and your correspondent "R." in the last two numbers of the *Builder*: so have several of the committee of the South London Working Classes Industrial Exhibition; and I can honestly assure you that, if we are on the wrong track, we are very willing to be set right.

Our suggested rules were remarked upon in the *Builder* of June 25: the approved rules also received notice upon October 1. We have been advertising for weeks upon your first page, as well as in other journals, our willingness to impart information to any who may apply; and it is really too bad that, after this, we are to be so misunderstood and misrepresented. I inclose you a copy of our rules, from which you will see that my language is not incorrect. For instance, your correspondent says,—"In practice, they [Industrial Exhibitions] will encourage, I fear, a feigned simplicity or ignorance which will be more petted and noticed than genuine work." Now, sir, please to put against this statement our Rule 2,—

"That the Exhibition be managed by a committee, elected at a public meeting, who shall have in view the encouragement of inventive skill, excellence of workmanship, and the wise employment of the workman's spare hours; for which purpose pecuniary or other prizes shall be awarded to the successful exhibitors."

Then, again, "R." says, "Professed workmen stand no chance in such exhibitions against amateurs." How true this is may be seen from our Rule 7,—

"Prizes for skill in design or execution will be awarded to:

1. Producers of articles calculated to promote domestic, sanitary, and social advantages.

2. Producers of useful, artistic, scientific, and ingenious designs, works, models, &c.

3. Special reference will be made in the distribution of prizes To mechanics and artisans peculiarly skilled in their own and other departments. Also to the unskilled and self-taught who shall prove themselves worthy of a place beside the more experienced. Articles exhibited by females are eligible for all prizes."

Of course, it is open to your correspondent, or any other person, to criticise or impugn the correctness of a decision at which adjudicators may arrive; but in my opinion your correspondent has received more than his due; at least he has obtained more than he would do if he were to exhibit in "the sunny south," as you will find by rule 8:—

"No money prize shall be more than 10*l.*, or less than 1*l.*; *and no article shall be eligible which has already received distinction from any exhibition.*"

Surely in three years your correspondent might have improved upon his previous production: if not, I am afraid his receiving a first-class prize then has encouraged him to do something worse than feign simplicity or ignorance. I must not trespass upon your valuable space to inform your readers as to the objects we had in view in originating industrial exhibitions. Their value, if wisely conducted, must be patent to every well-wisher of his kind; and we have to thank you and your brethren of the press for the many genial and commendatory notices we have received.

George M. Murphy, Hon. Sec.

*** The observations to which Mr. Murphy objects were founded on what has been done on the occasion of past exhibitions with a view to improvement in those to come. He fully admits by his letter the justice of what we desire, and we are glad to believe that the objection we have pointed out will be avoided in the coming Exhibition of the South London Working Classes.

ARCHITECTURAL COMPETITORS.

SIR,—You have from time to time taken much interest in the subject of architectural competitions, and your paper has contained valuable hints thereon. Can you say whether the following practices are recognised as legitimate in competitions:—

1st. To send in three designs in three distinct styles when one is asked for?

2nd. Is it usual or right for the judges to choose from all three, thereby giving three chances to one against every other competitor?

3rd. Is it legitimate to send in elevations to half the required scale, such being prepared in a short time without elaboration of detail and possessing all the characteristics of sketches?

4th. Is it customary to send, in addition to the three sets, alternative plans on each of the same?

An answer to these queries may enable the writer to know what to do in the event of again competing, having once got over the difficulty now felt that such are neither the right nor the true methods of competition fairly conducted. AN INQUIRER.

STATE OF THE JUNCTION ROAD, UPPER HOLLOWAY.

SIR,—Kindly aid us by your powerful pen in exposing the filthy and disgraceful state of this road. It has been in a rotten state for many years, and the two parishes, St. Pancras and St. Mary's, Islington, receive the rates between them for lighting and repairing roads and footpaths, and nothing for it. The Metropolitan Board of Works, Sir George Grey, and others, who have been written to, refer the applicants to the two parishes in question, who laugh at their superiors, and defy the ratepayers by stating the road does not belong to their parishes, but is in the hands of trustees. A few lines in your valuable Journal would be of great service to the ratepayers, and might be the means of bringing those who are responsible to their senses quickly. S. G. SYMONS.

P.S. At the present time should you send any gentleman to inspect the road, he might have a chance of seeing more mud between Park-street, Camden Town, and the Archway Tavern, Highgate-hill, than could be found in all other parishes in the metropolis.

ECCLESIASTICAL DILAPIDATIONS.

A CHARGE for dilapidation in the Deanery House, Dublin, has been made by Dr. West, the present Dean of St. Patrick's, against the executors of his predecessor, Dean Pakenham. The claim amounted to 1,400*l.*, and was objected to on several grounds,—chiefly that the dilapidations arose not from neglect, but natural decay. The Deanery House, the subject of this proceeding, was built in 1782, at an expense of 2,761*l.* 18s. 7½d. It was newly slated and repaired in the year 1839, at an expense of 250*l.*, charged on the benefice. In 1843 Dean Pakenham obtained a certificate against his predecessor, Dean Dawson, for the sum of 508*l.* 11s. 6d., and there is evidence that in 1845 Dean Pakenham expended 388*l.* 5s. 1½d. of that money in building a porch, and in repairs and improvements; but for this outlay he did not obtain a certificate. The report of the present commissioners, who were appointed on the death of Dean Pakenham, charges his executors with 1,324*l.* 8s. 9d., to be expended in present repairs, without charging anything upon the benefice for dilapidations occasioned by lapse of time. In 1839 the value of the preferment was stated in Dean Dawson's memorial to be 1,700*l.* a year. Now, after deducting taxes and other outgoings, it is probably about 1,000*l.* The case was before the Consistorial Court for several days, and judgment has been pronounced by Judge Battersby. The Judge allowed for the repairs of the roof, since they were thought necessary; but, as the dilapidations were the result of natural decay, and caused by no default of the late Dean, he charged them on the benefice.

WRONG QUANTITIES.

AT the Sheffield County Court, a case of some importance to builders,—Harrison *v.* Horsfield,—has just been decided. The action was brought by Mr. John Harrison, builder, to recover from the defendant, Mr. George Horsfield, modeller, the sum of 26*l.* 19s. 3d., damages sustained by the plaintiff owing to having been supplied by the defendant with improper quantities for a chapel, upon which quantities the plaintiff had contracted for certain work. In giving judgment, the Judge, after stating the facts of the case, said it was clear that if any person in a profession or skilled trade contracted with any other person who employed him to do certain work, he was bound to bring a proper amount of skill in the execution of that work. In this case, however, the employed person being a modeller, he thought the plaintiff should have exercised more caution than to rest satisfied with the quantities the defendant had supplied him. The case would have been different if the defendant had been an architect, or had represented himself as such. The only doubt was, whether it made any difference that in this case the plaintiff had employed the defendant, but the quantities had been thrust upon him by the trustees of the chapel. But upon consideration he was satisfied that it did not, for the plaintiff had two courses open to him: firstly, he could have refused to contract; and, secondly, he might have got the quantities checked by a competent person. The defendant told the plaintiff that he thought the quantities were right, but not trusting his own judgment he had got them checked by a bricklayer and a mason. It was clear, therefore, that the defendant did not hold himself out as having skill, and it should therefore have put the plaintiff upon his guard. The damage, if any had been sustained, was entirely owing to the plaintiff's want of caution, and he would be nonsuited.—Mr. Blackburn, for plaintiff, asked if it would make any difference if he were to prove that the defendant had since the occurrence held himself out as an architect? To this the Judge replied, I cannot ask him what he is now, but what he was at the time the cause of action arose. A case was granted on the application of Mr. Blackburn.

CHURCH-BUILDING NEWS.

St. Luke's, Berwick-street, Soho, London.—We are asked to correct statement that the works here were done "under the direction of Messrs. Cox and Mr. Teulon,"—the fact being, that Mr. Teulon was the architect, and Messrs. Cox were the builders employed by the committee.

Oxford.—Worcester College Chapel has been re-opened. The ceiling has been divided into panels, which have been elaborately decorated with figures and arabesques on a ground of colour and gold; and the whole surface of the walls has been ornamented in the same style, though with somewhat less richness. The woodwork which blocked up and disfigured the body of the building has been for the most part replaced by low seats of walnut-wood inlaid with box. The four niches at the angles of the building have been filled with statues of the four evangelists. A sum of money which will provide a lectern has been subscribed by the scholars elected under the new system. Four stained-glass windows have been already inserted, and three more are in course of preparation. These windows were designed by Mr. Holiday. They form a series representing the chief events in the history of our Lord. They have been executed by Messrs. Lavers & Barraud. The completion of the works will require at least 1,000*l.* more.

Abingdon (Berks).—The chief stone of a new church has been laid in the Conduit-field, Albert Park. The church is designed for 650 sittings, part of them appropriated. It will consist of a nave, with a north and south aisle, chancel, and chapel, and is in the Decorated style, with a bell-turret over the chancel arch. The architect is Mr. G. G. Scott.

Sibbertoft (Northants).—The parish church of Sibbertoft, a small village, about five miles from Market Harborough, and near the famous Naseby battle-field, has been re-opened, after having undergone a restoration. A new south aisle has been added to the church, which is divided from the remainder of the edifice by an arcade of three arches which spring from carved caps. A new porch has also been added on the south side. One of the usual old organ galleries has been removed, and the tower has consequently been thrown open. The north aisle has been extended eastward, and a vestry constructed, the latter being divided from the aisle by an oak screen, the upper panels of which are perforated by quatrefoils. The nave is divided from the chancel by a low oak screen, with tracery and carved head. The pavement throughout, except that in the north aisle and the vestry, has been paved with Minton's tiles, the patterns being designed by the Rev. Lord Alwyne Compton. They were laid by Mr. W. Schofield, from Messrs. Minton's manufactory. The vestry is paved with the old tiles from the altar steps, and the pavement in the north aisle is constructed out of the old stone ledgers, the margins being formed of new tiles. All the old pews have been removed. The seats in the chancel and new south aisle are now of oak; they also have some carving in the front. The roofs of the chancel, the two aisles, and the vestry, are now open-timbered roofs of stained deal, resting on carved corbels. The chancel roof has been decorated by Mr. Lea, of Lutterworth, and the whole of the roofs are covered with Colyweston slates. The architect employed was Mr. Browning, of Stamford, and the builder Mr. Law, of Lutterworth. The original contract was for 820*l.*, but it is expected that the total cost will be about 1,000*l.*

Barnwell (Cambridgeshire).—The chief stone of St. Matthew's Church, Barnwell, has been laid. The edifice is in course of erection from designs by Mr. R. R. Rowe, the architect of the Archdeaconry of Ely. It is somewhat peculiar in plan, owing in some measure to the shape of the site: it has a nave and transepts with a fully developed chancel, terminated by a semi-circular apse. The angles at the *crux* or junction of the nave and transepts are cut off obliquely, so that the body of the church is an octagon, similar in plan to the lantern of Ely Cathedral. The roof over this central portion is carried up for a height of 40 ft., and terminated with an octangular clerestory or lantern, which will give light and ventilation to the building. The material employed is the brick of the locality, relieved with mouldings and dressings in red brick. On the south side of the chancel there is a vestry with a furnace-room below, and with an organ-chamber over it. There are two entrance porches. All the seats are free. The church will seat 650 persons, and the cost of its erection will be under 2,000*l.* The contract for the walls and roof has been taken by Messrs. Bullock. For the completion of the church fit for service, 600*l.* are still required.

Melton Mowbray.—A meeting of the most influential inhabitants of this place was called to hear the opinion of Mr. Scott, concerning the state of the parish church. The Right Hon. the Earl of Wilton was present. Mr. Scott, in his remarks, said that the lower part of the tower, and the two large transept windows (north and south) were in a bad state of repair, and wanted great attention. With regard to the roofs, he was unable to examine them: the heating of the fabric, he said, would have to be by hot water, or hot air, the present system of heating being by large stoves. He did not propose any plan of restoration at present, but would send an efficient person whom he generally employed for such purposes, thoroughly to examine the state of the roofs. He would then give an estimate of the probable expense of the complete restoration of the fabric, which estimate he would give in parts. The Rev. W. M. Colles, M.A., said that nearly 2,000*l.* had already been promised towards the *complete* restoration of the church (4,000*l.* being the estimated cost).

Masbro'.—The new church of St. John the Evangelist, Masbro', has been consecrated by the Archbishop of York. The church is built of rubble stone, in the Transition style of architecture. Externally it has a somewhat heavy appearance. The open seats are of plain varnished deal, and the flooring is of lintens and encaustic tiles. The walls are bare, and the roof is of open varnished rafters. Gas jets from the columns light the building, and it is heated by a patent Gill stove. Seat accommodation is provided for 600 adults and 200 children, all free. The cost of the building is about 3,600*l.*; but, to complete it with tower and spire, according to the plans of the architect, 1,400*l.* more will be required.

Whitwood Mere.—A new church in the populous district of Whitwood Mere, near Castleford, has been consecrated by the Archbishop of York. It is called All Saints' Church, and is built upon land sold at a mere nominal price by Mr. T. D. Bland, of Kippax, who previously gave the site for a Sunday-school, and has since added a further gift of land for a parsonage-house. The new church is situate close to the Castleford and Normanton Road. Its architecture is in the Early English style, the architect being Mr. H. F. Bacon, of London; and the builders, Messrs. H. & W. Kassall, of Goole. It contains sittings for 320 persons, including accommodation for 96 children. The cost up to the present time has been rather more than 1,000*l.* The tower has only been carried a sufficient height to form a porch. It will be raised higher, and surmounted with a spire, when sufficient funds for the purpose have been obtained. The church is built of stone got in the neighbourhood, and the walls are lined with brick. The interior consists of a chancel, nave, and aisle. The latter communicates with the nave by three arches, and there is also an organ chapel, and vestry. The roofs are of fir, stained and varnished, and covered with slate. The seats are all open, constructed of plain fir, and simple in character.

DISSENTING CHURCH-BUILDING NEWS.

Bedford.—The foundation stone of a new Wesleyan Chapel has been laid. The chapel is to be in the Florentine Gothic style. The length, including the adjoining school, will be 104 ft.; the width, 47 ft.; and the extreme height, 68 ft. The pulpit, communion, and organ, will be opposite the south doors; and the gallery for the children and others will be under the south window. The architect has so arranged the building that at a future time it can be readily enlarged by means of a transept, and this without closing the chapel. The floor will be above the ground level, and the chapel will consequently be approached by a flight of steps. The architect is Mr. Palgrave, of London.

Devonport.—Christ Church, belonging to the Unitarians, has been opened. It is one of the most conspicuous buildings in the town. It will seat 480, and should an end gallery be erected, for which provision has been made, 600 persons. Its cost is about 2,100*l.* The style of the building Early Decorated. It is built of dark limestone, with relieving dressings; and consists of a nave 81 ft. long, with a recessed chancel, elevated two steps, at the north end; and a west transept 20 ft. deep, with organ-loft over. The south gable, in Duke-street, is 60 ft. high, and

is surmounted by a large crest. There are three entrances, two in Duke-street and one in the ope between Duke-street and Cumberland-street, along which the side of the chapel extends. In the ope at the north-east angle of the building are a tower and spire 80 ft. high. The roof is partly open-timbered, and panelled; the arched trusses resting upon polished marble shafts supported by carved and foliated corbels of Caen stone. The seating is of stained and varnished open benches, which are crimson-cushioned throughout. The large south window, 26 ft. by 12 ft., has been filled in with stained glass, for the execution of which the congregation is indebted to the gratuitous labours and skill of two of its members. The other windows are glazed with patterned glass. The chancel and the aisles are laid with encaustic tiles. The stone carving has been executed by Mr. Webber, of Stonehouse. The ten corbels supporting the roof timbers are all of different design, being respectively—the conventional Gothic vine; the national emblems, the rose, shamrock, and thistle; ivy with berries; English oak and acorns; geranium with flowers intertwined with clematis; white leaves and ears; passion-flower; vine; ivy leaves with berries; large white lilies intertwined with lilies of the valley. The terminals and finials of the reredos are carved to represent grapes, the hawthorn, lilies and buds, primroses, and ivy; and in the capitals of the pulpit columns similar subjects are introduced. The architect was Mr. Alfred Norman; the builder, Mr. Condy, of Plymouth. The staining and painting were undertaken by Mr. Fielder, and the gilding by Mr. Coveney. The gas and metal fittings were furnished by Gould & Company, Devonport. The organ was built by Mr. John Banfield, of Birmingham.

Chester.—The chief stone of a new chapel for the Presbyterian denomination has been laid by Mr. Barnes, M.P. for Bolton. The building is to be erected on the west side of the new street leading to the railway-station, half-way between the bridge and Foregate-street. It is to be in the Italian style of architecture, approached from the street by a flight of steps under a Roman portico. The interior will be fitted up with open benches, stained and varnished, accommodation being provided for 460 sittings, there being no galleries. A platform will be introduced in lieu of a pulpit. The dimensions of the chapel are as follows:—57 ft. long, 41 ft. 6 in. wide, and 22 ft. high, and it is proposed to heat it by hot water. School-rooms have been provided underneath the chapel the whole size of the building, and 12 ft. high, divided in the centre by a movable partition. The contract has been taken by Mr. R. Bellis, of Chester, for the sum of 1,525*l.* The architect is Mr. M. Gummow, of Wrexham.

STAINED GLASS.

St. Giles's Church, Fore-street, Cripplegate.—A three-light window, with tracery head, on the south side west end of this church, has been filled in with stained glass; this being the last filled with stained glass on that side. It contains three subjects, one in each opening,—the left hand, the Shepherds watching their Flocks; centre compartment, the Nativity; right-hand opening, the Three wise Kings. Each opening is surrounded with a rich border, in various colours, and the backgrounds are filled with ornamental coloured leaves. The three subjects are placed on a blue background, and the other parts of the window are filled with geometrical and foliated work and devices. The tracery head contains the Trinity in top spandrel; left hand, a figure of St. Giles; right hand, one of St. Luke. At the base of the window is the following inscription:—"Presented by the parishioners of St. Luke's in commemoration of the union of the Gift Estates, and in grateful remembrance of Edward Alleyne, founder of Dulwich College, and other benevolent donors. Richard Phillips, John Dall, churchwardens. 1864." The stonework of the window is entirely new, and the whole cost, including the stained glass, has been defrayed by the parishioners of St. Luke's. The window was painted by Mr. Charles Gibbs, sen., of Marylebone-road. This is the eighth window Mr. Gibbs has executed for the church.

St. James's Church, Bury St. Edmund's.—The stained glass for Mr. Scott's window above the chancel arch in this church, has been fixed in its place. The design represents one of the apocalyptic visions. In the centre light our Lord is represented throned in glory on the rainbow, with the right hand raised in the act of benediction, and the left holding upon his knees "the opened book," on the pages of which are inscribed the "Alpha" and the "Omega." At his head and feet the four living creatures pay him worship. In the smaller lights, to the right and left, angels are engaged in adoration, with censers and with trumpets; and in the tracery appear a multitude of the angelic host. In designing the tracery the architect had this subject in view, and the stonework forms a canopy over the centre light, so as to give greater dignity to the principal figure. The glass was designed and executed by Messrs. Hardman & Son, of Birmingham. The whole window is erected in memory of the late Mrs. Haggittt by her children.

Staindrop Church (Durhamshire).—This chancel has been farther enriched with some painted glass. The window filled is on the south side. The style of the stonework is Late Perpendicular. The design of the glass has been treated harmoniously. One subject fills the whole window, viz., the Ascension of our Lord. This has been arranged into a series of six groups, enshrined in tabernacle work,—the three lower showing the kneeling apostles and the two angels in white standing in the midst of them; the three upper showing our Lord ascending, surrounded by angels with musical instruments. These angels are continued into the tracery opes, the whole being surmounted by a cross of glory fitting into the stonework, which itself forms a cross. The window (as is stated on a tablet at the base) is placed by Lady Augusta Mary Poulett to the memory of her sister Sophia, Duchess of Cleveland, eldest daughter of John, fourth Earl Poulett. The artists by whom the design and execution of the work have been carried out were Messrs. A. & W. H. O'Connor, of London.

RAILWAY MATTERS.

Nearly 400 notices of intended applications to Parliament in the ensuing session have been given for railway, canal, and dock bills, all connected with railways. Plans and sections have been deposited at the Board of Trade for 354 projected new railways and works, being 46 more than those deposited last year, and it is believed the largest number since the year 1846. In the last session of Parliament it was found difficult to get through the work, and the railway business for next session promises to be much heavier than last session. Notices for twenty-seven bills have been given for lines and junction lines for the metropolis and the suburbs alone, but none of them are equal in magnitude to any of those of last session. The Metropolitan District Company (part of the inner circle) merely propose to divide their authorised double junction line with the West London Railway, from Kensington to Fulham, and to purchase land, houses, and property for the purpose. The East London (Thames Tunnel line) have come forward with a modified scheme for constructing a railway from the Great Eastern at West-place, Bethnal-green, passing through the Thames Tunnel to the London and Brighton Railway at Deptford, with a branch to the South-Eastern Railway, and also to the Great Eastern at Liverpool-street, to Whitechapel, and to the London and Blackwall Railway at Mile-end Old Town. The Eastern Metropolitan propose to construct a railway from Aldgate to Mile-end. The Metropolitan and St. John's Wood Railway Company ask for power to extend their line to Willow-road, Hampstead. The Waterloo and Whitehall Company propose to make a railway from Great Scotland-yard, passing under the Thames to the Waterloo station of the London and South-Western Railway Company. The London, Chatham, and Dover, propose to make a junction line from the Lambeth to the London and Brighton Railway at the west end of Denmark-hill tunnel, a junction railway from their Peckham line at Camberwell to the London and Brighton Railway at Hanover Park-road, to oblige the Crystal Palace and South London Company to abandon the construction of the portion of their line from Camberwell to Denmark Hill, to make a junction line at Beckenham, and to abandon the whole of their Bickley and other authorised junctions: they also propose to enable the London and South-Western Company to work over and use with their engines and carriages the railways, sidings, and stations of the London, Chatham, and Dover Company in Surrey, Middlesex, and London. The *Times* is of opinion that the London, Chatham, and Dover Company are unusually modest in their demands this time.——The traffic receipts of railways in the United Kingdom amounted for the week ending the 26th of November, on 11,732 miles, to 605,631*l.*, and for the corresponding week of last year, on 11,395 miles, to 574,629*l.*, showing an increase of 337 miles, and of 32,002*l.* in the receipts.——The directors of the Scottish Central Railway Company have given orders for fitting up some of their first-class carriages with plate-glass panes betwixt the different compartments, as first suggested in the *Builder*.

GAS.

A movement is at work in London to reduce the price of gas from 4s. 6d. to 2s. 9d. per 1,000 ft., at which latter price the supply is given at Plymouth, which seems to be chosen as a special instance of what can be done by liberal management, both for behoof of the public and of the shareholders, who reap the highest profits allowable, while supplying the public at the lowest possible price. At the last meeting of the London Court of Common Council, petitions were presented by Sir F. G. Moon and Deputy Reed from the inhabitants of the wards of Portsoken and Cripplegate, praying the court to take some steps for the relief of the inhabitants from the injurious monopoly they now suffer in the supply of gas, and to have the supply increased, the quality improved, and the price lowered. The court was also prayed to take the necessary steps to procure an Act of Parliament to enable the corporation to supply the consumers within the City, and thus put an end to the present unsatisfactory, expensive, and insufficient supply. Eventually the petitions were referred to the General Purposes Committee.

At Brighton, the following arrangements have been proposed by Mr. Rutter, on behalf of the Brighton Gaslight and Coke Company, and accepted by the Provisional Directors of the Brighton Gas Consumers' Company:—The price of gas to be reduced from 4s. 9d. to 4s. 6d. on 25th March, 1865; on 24th June following, from 4s. 6d. to 4s. 3d.; and on 25th December, 1865, from 4s. 3d. to 4s. per 1,000 cubic feet. After 25th December, 1866, such further reductions are to be made as may be found practicable.

At Crewe, in consequence of a resolution by the directors of the London and North-Western Railway Company to compel all gas consumers to deposit 5s. for each gaslight, a great public meeting has been held, where it was shown that such a deposit was unreasonable and uncalled for, that the interest on the gross deposits would amount to nearly 600*l.* per annum (for which the gas consumers received no equivalent), and that the present price of gas—6s. per 1,000 ft.—was preposterously high. It was resolved that the directors be memorialised, through the local Board, to abandon the demand of a deposit, and which for some time has been exacted from new comers. The starting of a new gas company was very favourably spoken of.

At Kirkaldy, in Fifeshire, Scotland, a ship has been despatched for the island of St. Thomas, with full cargo (nearly 500 tons), consisting of gasometer, gas-pipes, bricks for building in the gasometer, retorts, &c., to be used in the erection of works for the manufacture of gas to light the principal town on the island of St. Thomas. She also took out a number of mechanics, who are to be employed in the fitting up of the works.

In Cork the Gas Consumers' Company have reduced the price of their gas to 4s. per 1,000 cubic feet; and for street-lamps, 3*l.* each, to be lighted the whole year round. The company is paying 8 per cent. The original capital of the company was 40,000*l.*

A Paris journal gives the following statistics respecting the manufacture of gas in Paris:—In 1854 the total quantity produced was barely 40,000,000 of cubic mètres. The ten gasworks of Paris employ 2,691 persons for the in-door service, whose salaries amount to about 2,342,000f. Besides these there are 448 lamplighters, &c., who each receive 60c. a day, amounting in all to about a million yearly. The whole length of gas-pipes laid down in Paris exceeded 200 leagues in 1861.

The Hague *Dagblad* states that M. N. D. Goldsmid, of that town, has acquired a concession for lighting Moscow with gas. It is granted for thirty years, and gives him an exclusive privilege of laying gas-pipes and other fittings in the streets of Moscow for that time. The number of public gas-lamps is to be 10,000, and private buildings will require 150,000 lights.

Moscow has more than 400 hotels and 3,000 coffee-houses, inns, and gin-shops. These are open all night, as the inhabitants seldom go to bed before two or three in the morning, and during the winter scarcely ever remain in the street. The number of shops and magazines is four times greater than in St. Petersburg.

Books Received.

What Men have said about Woman. Compiled and analytically arranged by Henry Southgate. With Illustrations by J. D. Watson. London: Routledge & Co. 1865.

In all respects—even in paper and printing—this is a very choice volume; but above all, in subject,—as "a collection of choice thoughts and sentences;" and in illustration of woman,—as the girl, the maiden, the sweetheart, the wife, the mother, the ministering angel. In all her brighter aspects woman truly merits the choicest of volumes. And the compiler of "Many Thoughts of many Minds," having tried his "'prentice hand" on man, has here shown his experienced ability to undertake "the lasses O." The writers are many with whose thoughts and sentences as to woman Mr. Southgate has here manifested his acquaintance; but he speaks modestly in his little prefatory address to the "gentle reader," of simply having gathered "here and there a flower" from among "thousands still unculled" as a tribute "to the homage civilized man, in every country, is ready to pay to the fairest portion of creation." Who can say too much for them? As Bunyan writes, with more elaborate illustration (Mr. Southgate has missed this by the way), it was a woman who stood at the foot of the Cross; it was a woman went first to the Sepulchre. For steadfast devotion, patience, confiding trustingness, abnegation of self, woman stands alone; while there are few departments of mental work wherein she cannot maintain an equal position with man. Man but pays back a small part of his debt when he acknowledges her excellence.

Miscellanea.

Wolverhampton Surveyorship.—Mr. A. Morgan, of Leamington, has been elected to the vacant office.

Doncaster: Officer of Health.—The Doncaster Corporation, acting as a Board of Health, have appointed Mr. Francis Carbutt Fairbank, surgeon, health officer for the borough.

Royal Academy of Arts.—The ninety-eighth anniversary of the foundation of the Royal Academy was held on Saturday, the 10th instant, when the medals and prizes were awarded to the successful students. The travelling studentship of 100*l.* for a year was gained by Mr. Phené Spiers.

Voluntary Examination Class.—The meeting of the class will be held as usual on Tuesday next, the 20th inst., when Mr. R. O. Harris will take up the subject of "Timber Roofs." This will be the *last* meeting of the class this session, but it will be recommenced after the examination has taken place.

Architectural Union Company.—At the general meeting of shareholders, held at the House in Conduit-street, on the 7th instant, a dividend of 5 *per cent.*, free of income-tax, was declared. Spacious accommodation, with lighting, warming, and attendance, for any one night of the week, can still be had at 35*l. per annum.*

Moulds for Casting Metal.—Mr. H. Cochrane, of the Ormesby Ironworks, has patented an invention which has for its object the formation of permanent moulds for casting iron and other metals, that shall not act injuriously on the casting by chilling the surfaces of the same, or by engendering gases. For this purpose he makes such moulds of a composition consisting of fire-clay mixed with black-lead or plumbago, or of fire-clay mixed with black-lead and silicon, or of black-lead mixed with silicon; the composition which he has found suitable for the purpose being one-third of black-lead mixed with two-thirds of fire-clay, with a small proportion of silicon, but he in no way limits himself to these proportions. The moulds, when made, are, by preference, dried gradually at a moderate heat.

Okehampton Water Supply, Devon.—The scheme and plans of Mr. Edward Appleton, of Torquay, for the water supply of this town, have been selected.

American Cathedral.—The largest church in the American States, St. Paul's and St. Peter's Cathedral at Philadelphia, was consecrated on the 20th ult. It has been the work of eighteen years' labour, and has cost nearly 500,000 dollars.

Art-Workmanship Prizes, Society of Arts. Ninety-six articles sent in competition for the Art-Workmanship Prizes, have been received from seventy-three competitors, and will be arranged for exhibition in the society's rooms on and after Wednesday, the 21st instant.

The New Exchange at Hull.—The committee of the Hull Exchange Company have appointed Mr. William Lewis as clerk of the works. The work of excavation is already begun, and the building, it is expected, will be completed in about eighteen months.

Mural Decoration, Paris.—M. Robert Fleury has been commissioned to execute four large works for the decoration of the great hall of the new Tribunal of Commerce, which has been recently erected, facing the Palais de Justice, and between it and Notre Dame. The work will occupy the artist about three years. The river façade has recently been completed: it is ornamented with four colossal figures, representing Law, Firmness, Justice, and Prudence, executed in Caen stone, by the sculptors Elias Robert, Endes, Hippolyte Chevalier, and Jules Salinson, and with caryatides by A. Carrier.

Land in the City.—In the Lord Mayor's Court the case of "Prince's devisees *v.* The Metropolitan Railway" was tried before the Recorder, the claimants being represented by Mr. Hawkins, Q.C., and Mr. Cowie; the Company by Mr. J. H. Lloyd and Mr. Hollway. The claimants were the reversioners of property known as No. 17, Little Moorfields, at present let on lease for eighteen years to come at 45*l.* a year. Their witnesses valued the property at from 1,800*l.* to 1,900*l.*, while the evidence offered by the company was intended to show that it would be fairly purchased for little more than 1,200*l.* The jury, however, gave the claimants 1,700*l.*

A new Music Hall for Shoreditch.—In Commercial-street, Shoreditch, near the Great Eastern Station, a new hall, to be called "The Royal Cambridge Music Hall," has been erected and opened. There are shops on the ground-floor, which are let independently of the hall. The hall itself is marked by an entrance corridor, which has detached columns on either side, and tesselated tile paving and stone steps the full width of the entrance. Here is the principal staircase, which has been constructed so as to ensure security from overloading. The outside edge is carried on iron girders supported on columns, while the other edge is pinned into the wall. The architect has placed the orchestra in the middle of the longest side. With respect to ornamentation, more reliance is placed on colour than on devising ornaments. The decorations have been executed by Mr. Homann. The lighting is by ornamental stars suspended from the ceiling, which have been executed by Messrs. Buckley & Beach.

Cannon-Street Extension of Charing-Cross Railway.—The original estimate for this extension of five-eighths of a mile in length, says the *Railway News*, was 800,000*l.*, but the plans have since been considerably enlarged and many alterations made, which will no doubt bring up the cost to more than 1,000,000*l.*, that being about the average mileage cost of the Charing-Cross main line. We should probably not be far wide of the mark if we took the cost for this extension at the rate of nearly two millions per mile, including, of course, the large station in Cannon-street. The cost of the land has been enormous, and as in the case of the Chatham and Dover Railway, the Legislature has imposed upon the shareholders the task of improving the adjoining thoroughfares to the station. The City authorities had the modesty to ask the Charing-Cross Railway Company to widen Walbrook, being the narrow street connecting the Poultry with Cannon-street. The company have purchased property in the City at enormous prices, and have given to the public the benefit of the purchases to the extent of more than 8,000 square feet.

West Derby Local Board Surveyorship.—The West Derby Board, Liverpool, have raised their surveyor's salary from 150*l.* to 200*l.* per annum. A proposal to raise it to 250*l.* was negatived.

New Reservoir for Dorking.—Surveys have recently been made of some of the most elevated positions near Dorking, with the object of selecting a site for the construction of a new reservoir, in connexion with the present waterworks. A new undertaking upon the limited liability principle is talked of.

What Strikes bring about.—A large coal-cutting machine has been introduced into the Oaks Colliery, in South Yorkshire, and it is reported that it works most admirably. The colliers at the Oaks pit have been on strike for about thirty-seven weeks, and the coal-cutting machine has been developed to supply their place. It will probably be extensively used in a short time, as the patentees are said to have already received several orders.

History of Naval Architecture.—The collection of models of naval architecture which has hitherto been deposited in the vaults of Somerset House, has been removed to the South Kensington Museum, temporarily, until suitable premises are built. It will be opened to the public for the first time, without restriction, on the 19th December. The series begins with the *Great Harry*, of Henry VII.'s time, and is continued to the iron ships now building both in her Majesty's dockyards and private yards.

Chatham Dockyard.—An enlargement of Chatham Dockyard to four times its present size, as we have ere now noted, is projected. Estimates are now in course of preparation and the Lords of the Admiralty have been inspecting the works in actual progress, as well as those contemplated, in order to decide on those which will be carried out, together with the probable sum necessary to be taken for the purpose in the estimates. The principal of the works now in progress are those in connexion with the formation of the new docks, basins, factories, workshops, and other buildings at the eastern extremity of the present dockyard, on the site of St. Mary's Island, the whole extent of which, as well as some of the adjacent land acquired by the Crown, has been absorbed for that purpose, the entire new works extending over an area of 300 acres. The present dockyard covers an area of barely 100 acres, so that the additional space will enlarge Chatham Dockyard to four times its existing size. Up to the present time the work has been done by convicts, of whom there are from 800 to 1,000 daily employed on St. Mary's Island.

The Temple of Venus Victrix at Rome.—We have before now told our readers of the discovered statue of a youthful Hercules. In making further excavations to find, if it might be, the pedestal and missing foot of the statue, they have opened up the walls and pillars of the Temple of Venus Victrix, of solid masonry. A correspondent of the *Athenæum* says:—This temple was built on the summit of the Cavea of the theatre: it is, of course, mutilated. It has always been known to archæologists that the temple had stood in this part of the theatre. It was erected by Pompey, in order to enable him to have his theatre inside the walls of Rome; for in his days theatres were badly looked upon; they were considered very demoralizing places, and were not permitted within a mile or two of the city. By having the temple there, he invited his friends to worship the goddess, and then treated them to theatricals. The portico adjoining the theatre was called Hecatonstylon, or hundred-columned, and ran to the rear of the stage, inclosing within its ranges beautiful gardens and a senate-house: the latter has been made memorable by the death of Cæsar, which occurred within its walls at the base of Pompey's statue. This morning I descended into the hole, as it is called, and found myself walking about on the Plates, or ground-floor of Pompey's Theatre. I walked up to the foundations of the Temple of Venus, and near there into some of the corridors supporting the sloping tiers of seats from whence the spectators viewed the spectacle. The Cavaliere informed me that he intends to excavate the whole of the ground there belonging to him; and, instead of filling it up afterwards, he will protect the whole space with a vaulted building, and have gas laid all through it, so that the archæologist hereafter may be able to explore, study, and enjoy it.

Testimonial to Sir Rowland Hill.—At the request of the subscribers, Sir Rowland Hill has intimated his wish with regard to the application of the 400*l.* subscribed in Liverpool as a testimonial for his public services, that the money be laid out in paintings, to be selected by Sir Rowland himself, and to bear appropriate inscriptions on their frames.

Proposed Public Parks.—The project of forming a public park or recreation-ground at Colchester has been revived, and the extensive garden-grounds known as Lord's Land, some 12 acres in extent, and once intended as the site of the Cattle-market, have been suggested as a suitable site.——The Rev. C. Hesketh, rector of North Meols, offers to give to the town of Southport thirty acres of land at the north-east boundary for a public park. A public meeting is about to be held to give the public an opportunity of expressing their gratitude.

Sheffield Inundation Claims.—Some rather strange claims have been brought before the Sheffield Inundation Commission. A grocer claimed compensation for the drowning of customers, and for the destruction of houses which had caused customers to remove to other parts of the town. A rat-catcher sent in a claim for damage, "because the flood had drowned all the rats in the district that he was accustomed to operate in." A surgeon sent in a claim for damage caused by the removal (in consequence of the flood) of many ladies whom he would otherwise have had to attend at their confinements!

Destruction of Sherburn Hospital Church, Durham.—This ancient church has been totally destroyed by fire. It may be mentioned that the entire buildings formed a quadrangle, inclosing an area of about an acre, and the chapel was situate at the south-east side. The immediate cause of the fire is attributed to the overheating of the flues, which having ignited the woodwork above, it speedily spread to the other parts of the chapel. The fire was lighted on Saturday evening, in order that the church might be properly warmed for divine service the following day. About four years ago we understand a similar fire occurred from the same cause, but on that occasion the damage, which was confined to the western portion of the building, was not of a serious nature. The usual winter's crop of flue fires is thus already ripening.

Brighton New Workhouse.—The directors and guardians have come to the ratepayers for their sanction to the expenditure of 30,500*l.* in the erection of the new workhouse, which is to be built on the site adjoining Elm-grove. They had already full power to proceed with the work, the plan (that of the parish surveyor) having been approved by the vestry in May last, and sanctioned by the Poor-Law Commissioners, who were also willing to advance the necessary funds. But the amount of the lowest tender given in upon the plans (30,500*l.*) exceeded by some 7,000*l.* the estimate of the guardians. The proposed expenditure of 30,500*l.* will, it is thought, be condemned, and the directors and guardians directed to obtain fresh plans for a building, the cost of which shall not exceed 18,000*l.* It is curious that accepted plans for the new workhouse have been before rejected on account of expense; but it was then the Board which rejected them.

Enormous Weighbridge.—A new weighbridge has been placed by the Manchester markets committee, in Liverpool-road. The platform is 16 ft. 6 in. long, and 9 ft. wide, in one solid casting, and the machine is adjusted to weigh from 2 lb. to 70 tons. It has been tested up to 50 tons. The transferring lever is 25 ft. 6 in. long, and is made upon a new principle, as applied to weighbridges, being constructed of wrought-iron boiler plates riveted together in the proper form, after the manner of the modern tubular bridges. Its strength was demonstrated when the machine was tested with 50 tons, which remained on the platform forty-three hours, and the deflection of the lever at that period was very slightly over the eighth of an inch at the middle of its length. The weighbridge was made for the markets committee by Mr. Thomas Steen, of Burnley. The foundations are cased with a space between each to lessen vibration from passing carriages, and, together with the machine-house, were erected from plans and under the direction of Mr. Lynde, the city surveyor.

Electricity applied to Organs.—Mr. Barker, organ-builder, Paris, is said to be the inventor of a mode of applying electricity in the construction of great organs, so that the largest organ may be played as easily as the piano, and the pipes may be distributed anywhere through a church. This invention is now being applied to a great organ in course of construction for the church of St. Augustin, in Paris.

Church Bells in France.—The new belfry of the church of St. Germain-l'Auxerrois will soon receive a set of chimes similar to those for which Strasburg, Dunkirk, Bruges, &c., are celebrated, but with the improvements suggested by the progress of modern mechanical art. M. Collin, who is entrusted with their execution, has rejected all the cumbersome old contrivances which exclude the possibility of playing several tunes except at an enormous cost. While the cylinder or barrel which works the chimes at Bruges, for instance, cost 60,000 francs, M. Collin's barrels will cost only 250 francs each, so that as every tune requires a barrel by itself, a great variety of tunes will be obtained at a very trifling cost. Instead of the enormous weights attached to the works under the old system, he employs Lenoir's gas-machine as a motive power, whereby he forces air into a reservoir, so as to produce a pressure of 2½ atmospheres. The air thus accumulated passes into a series of bellows, replacing the levers of the old system; and thus the artist who sets the chimes in motion finds an instrument as easy to play as a piano. The chimes will consist of forty bells, and will play two different tunes daily—one at 2 p.m., and the other at 8 p.m.

St. Cross Hospital, Winchester.—On Saturday, November 25th, the Bishop of Winchester inspected the restoration now being carried on in the Church of St. Cross. This church was extensively altered and adorned in the fourteenth century, by John de Campden, the friend of Wykeham, and then master of the hospital. From that time to the present, though it has received repeated coats of whitewash, and been considerably mutilated in some parts, it has undergone no material alteration, so that all its distinctive features may be traced, and it presents unusual capabilities for genuine and successful restoration. Many of our readers may be aware that, in consequence of the munificent donation of "Z. O." last year, the work was commenced in earnest, under the direction of Mr. Butterfield; and that the master has succeeded in raising a second 500*l.* to meet "Z. O.'s" donation. It was to inspect the mode in which this sum of 1,000*l.* is being spent that the bishop of the diocese visited the church. His lordship, in expressing his entire satisfaction with what had been done, warmly recommended the master to make a vigorous effort to raise a sum commensurate with the real importance of the work; and the bishop himself offered on the spot a further donation of 100*l.* for this object, and expressed his conviction that not less than 2,000*l.* more would be required for its successful prosecution. The large and influential party assembled completely concurred in this opinion. Those who have not seen the interior of the church for some months, can scarcely bring themselves to believe that so many beauties lay concealed beneath the plaster and wash, requiring so small an effort to reproduce them in all their original grace and loveliness. We heartily wish success to the work, and commend it to the best attention of our readers.

How the Language becomes enriched.—One murderer gave us the word "burke;" a second appears likely to add to the vocabulary of trade. In a small shop not far from Sloane-square, Chelsea, may be seen the following tasteful announcement:—"Hats muller'd here"!

TENDERS.

For alterations and additions to Fredville House, Wingham, Kent, for Mr. C. J. Plumptree. Messrs. Stevens & Robinson, architects. Quantities supplied:—

Fry & Pepper	£4,775 0 0
Wilson	4,605 15 0
Bowley (accepted)	4,589 0 0

For building vagrant ward, on the ground opposite the Workhouse of the parish of St. George's-in-the-East. Mr. A. Wilson, architect:—

Hill & Keddle	£1,350 0 0
Worskett	1,350 0 0
Palmer	1,209 0 0
Hearle	1,292 0 0
Johnston (accepted)	1,235 0 0
Ennor	1,179 0 0
Dudley	1,175 0 0

For new school-room and class-room, Finchingfield Essex. Mr. C. Pertwee, architect:—

Gardner (inclusive of old materials)	£410 0 0
Brown	400 0 0
Sudbury	340 12 6

For new school, class-rooms, and vestry, Baddow-lane Chelmsford. Mr. C. Pertwee, architect:—

Patten, Pinnock, & Raffell	£962 5 0
Baker	795 0 0
Roper	784 0 0
Fincham & Last	779 10 0
Thorn	753 0 0

For residence in the Avenue-road, St. John's-wood, fo Mr. J. N. Palmer. Mr. J. P. Eade, architect. Quanti ties supplied by Mr. J. M. Roberts:—

Hibbert	£3,653 0 0
Conder	3,322 0 0
Simpson	3,191 2 0
Henshaw	2,889 10 0
Prichard	2,881 0 0
Robinson	2,837 0 0
Scrivener & White	2,767 0 0
Roberts (accepted)	2,655 0 0

For erecting villa residence, at Lower Sydenham, fo Mr. A. Rowland. Mr. E. Badger, architect:—

Glen, Brothers	£721 0 0
Amar	710 0 0
Barrett	695 0 0
Jones	645 0 0
Jerrard	644 0 0
Rees	639 0 0

For alterations and additions to 114 and 115, Bunhill row, and 5 and 6, Lamb's-buildings, in the rear:—

Scrivenor & White	£4,398 0 0
Stone & Pierce	4,040 0 0
Manley & Rogers	3,881 0 0
Childs	3,878 0 0
King	3,785 0 0
West & Morse	3,779 0 0
George	2,973 0 0
Ashton	2,692 0 0
Perry	2,345 0 0

For the erection of a villa on Kirtley Cliff, South Lowestoft, for Mr. Robert Ware. Mr. W. Oldham Chambers, architect:—

Rix (accepted)	£880 0 0

TO CORRESPONDENTS.

Magnesium (a dozen correspondents, in consequence of our notice, ask who are the parties preparing the magnesium wire. We must leave them parties, however, to make themselves known).—J. F.—E. V.—C. CHURCH, TURRET, and STABLE CLOCKS. J. W. Benson, having erected steam-power and improved machinery for clock-making, at the manufactory, Ludgate-hill, will be glad to furnish to clergymen, architects, and committees, Estimates and Specifications of every description of Horological Machine, especially cathedral and public clocks, chiming tunes on any number of bells. A descriptive pamphlet on Church Clocks post free for one stamp. Watch and Clock Maker by Warrant of Appointment to H.R.H. the Prince of Wales, and maker of the great clock for the Exhibition, 1862. 33 & 34, Ludgate-hill, E.C. Established 1749.

ADVERTISEMENTS.

FINE ART CATALOGUE.

Preparing for early issue, and will be forwarded on receipt of two stamps.

CATALOGUE of a CHOICE COLLECTION of BOOKS on the FINE ARTS, comprising Books of Prints, Illustrated Books, Picture Galleries, Lives of Painters, Architecture, Arms and Armour, Antiquities, Blue Coats, Caricatures, Costumes, Emblems, Designs for Ciphers, Dance of Death, Plans for Gardens, Gems, Portraits, Sculpture, Vases, Views, Voyages, Pittoresques, Woodcuts, and Specimens of the Art of Writing, Drawings, and Prints.

On Sale at the extremely low prices affixed, by T. & W. Boone, 29, New Bond-street, London, W.

PEOPLE'S EDITION OF MACAULAY'S MISCELLANEOUS WRITINGS.

On January 2, 1865, will be published, Part I (in crown 8vo. price 1s.

PEOPLE'S EDITION of LORD MACAULAY'S MISCELLANEOUS WRITINGS. Uniform with the People's Editions of Lord Macaulay's Essays and History of England. To be published Monthly, and completed in Four Parts, price One Shilling each

London: Longman, Green, & Co. Paternoster-row.

Reduced from 4*l.* to 20*s.* the few remaining copies of

NORMAN SHAW'S ARCHITECTURAL SKETCHES from the CONTINENT. A series of Views and details from France, Italy, and Germany. 100 plates, folio, half morocco, gilt edges.

Reduced from 4*l.* to 22*s.*

NESFIELD'S SPECIMENS of MEDIÆVAL ARCHITECTURE, from Sketches made in France and Italy. 100 plates, folio, half morocco, gilt edges.

Recently reduced from 21*s.* to 8*s.* Cloth, elegant Post free 6*s.* 6*d.*

DRESSER'S ART of DECORATIVE DESIGN. 200 Illustrations and Many Chromo-lithographic Plates

Post-office orders, payable at Holborn Office, to BRADLEY THOMAS MATSFORD, 53, High Holborn, London, W.C. B. T. B. begs to say that the above are the entire remainder of these valuable works.

In 2 vols. imperial 4to. half-morocco, 4*l.* 4*s.*

THE ENGINEER and MACHINIST'S ASSISTANT; being a Series of Plans, Sections, and Elevations of Steam Engines, Spinning Machines, Machines for Grinding Tools, &c. taken from Machines of the most approved construction at present in operation; with Descriptions and Practical Essays on the Construction and Application of the Steam Engine, and on various Departments of Machinery.
London: BLACKIE & SON, 44, Paternoster-row and all Booksellers.

In 1 vol. imperial 4to. half-morocco, 42*s.*

THE ENGINEER and MACHINIST'S DRAWING BOOK: a Complete Course of Instruction for the Practical Engineer; comprising Linear Drawing, Projections Isometric Curves, the various Forms of Gearing, Reciprocating Machinery, Sketching and Drawing from the Machine, Projection of Shadows, Tinting, Colouring, and Perspective. Illustrated by numerous Engravings on Wood and Steel.
London: BLACKIE & SON, 44, Paternoster-row; and all Booksellers.

In 2 vols. imperial 4to. half-morocco, 4*l.* 15*s.*

RAILWAY MACHINERY: a Treatise on the Mechanical Engineering of Railways, embracing the Principles and Construction of Rolling and Fixed Plans, in all Departments. Illustrated by a Series of Plates on a large scale, and by numerous Engravings on Wood.
By DANIEL KINNEAR CLARK, C.E.
London: BLACKIE & SON, 44, Paternoster-row; and all Booksellers.

In 1 vol. imperial 4to. half-morocco, 35*s.*

RECENT PRACTICE in the LOCOMOTIVE ENGINE, comprising the latest English Improvements, and a Treatise on the Locomotive Engines of the United States. Illustrated by a Series of Plates and numerous Wood Engravings.
By DANIEL KINNEAR CLARK and ZERAH COLBURN, Civil Engineers.
London: BLACKIE & SON, 44, Paternoster-row; and all Booksellers.

In 2 vols. imperial 4to. half-morocco, 4*l.*

RAILWAY LOCOMOTIVES: their Progress, Mechanical Construction, and Performance, with the recent Practice in England and America; being a Combination of all that relates to the Locomotive in the two previous works. Illustrated by an extensive Series of Plates, and numerous Engravings on Wood.
By DANIEL KINNEAR CLARK, C.E.
London: BLACKIE & SON, 44, Paternoster-row; and all Booksellers.

12mo. cloth, 5*s.* 6*d.*

THE MECHANIC'S CALCULATOR; comprehending Principles, Rules, and Tables, in the various Departments of Mathematics and Mechanics; useful to Millwrights, Engineers, and Artisans in general. 14th Edition, corrected and greatly enlarged.
By WILLIAM GRIER, C.E.
London: BLACKIE & SON, 44, Paternoster-row; and all Booksellers.

12mo. cloth, 9*s.*

THE MECHANIC'S DICTIONARY; being a complete Note-book of Technical Terms, Rules, and Tables, useful in the Mechanical Arts. Illustrated by Engravings of Machinery, and nearly 200 Cuts and Diagrams on Wood.
By WILLIAM GRIER, C.E.
London: BLACKIE & SON, 44, Paternoster-row; and all Booksellers.

In 1 vol. super-royal, 4to. half-morocco, 63*s.*

THE CARPENTER and JOINER'S ASSISTANT; being a Comprehensive Treatise on the Selection, Preparation, and Strength of Materials, and the Mechanical Principles of Framing, with their Applications in Carpentry, Joinery, and Hand Railing; also, a Course of Instruction in Practical Geometry, Geometrical Lines, Drawing, Projection, and Perspective, and an illustrated Glossary of Terms used in Architecture and Building. By JAMES NEWLANDS. Illustrated by an extensive Series of Plates, and many hundred Engravings on Wood.
"We know of no treatise on Carpentry and Joinery which at all approaches this in merit."—*Mechanic's Magazine.*
London: BLACKIE & SON, 44, Paternoster-row; and all Booksellers.

Foolscap, 8vo, bound, 7*s.* 6*d.*

PEDDIE'S PRACTICAL MEASURER: a Series of Tables for facilitating the Calculations required in all the Building Trades. New edition, greatly improved and enlarged.
London: BLACKIE & SON, 44, Paternoster-row; and all Booksellers.

FOR CHRISTMAS AND NEW YEAR'S GIFTS.

DR. FLETCHER'S GUIDE to FAMILY DEVOTION. A sale of 100,000 copies induced the Author to improve and enlarge the work. It comprises 730 Services, each including a Hymn, Prayer, Portion of Scripture, and appropriate Reflections, being one for Morning and Evening of every day in the year. Also an Appendix, containing Prayers for Particular Occasions. One vol. royal 4to. 26 Engravings, 28*s.* cloth gilt.
Also in half and morocco bindings.
London: JAMES S. VIRTUE, City-road and Ivy-lane.

Just published, in royal 32mo. roan, price 5*s.*

A HANDBOOK for ARCHITECTURAL SURVEYORS, and Others engaged in BUILDING.
By JOHN THOMAS HURST, C.E.
CONTENTS:
Formulæ useful in designing Builders' Work.
Tables of the Weights of Materials used in Building.
Memoranda connected with Builders' Work.
Architectural Mensuration.
Constants of Labour
Valuation of Property.
Summary of the Practice in Dilapidations.
Scale of Professional Charges for Architects and Surveyors, with various useful Tables and Memoranda.
London: R. & F. N. SPON,
16, Bucklersbury.

New Edition, price 4*s.* bound in cloth,

LAXTON'S PRICE BOOK for 1865, for ARCHITECTS, ENGINEERS, BUILDERS, CONTRACTORS, SURVEYORS, &c. (established 1819) containing, with a variety of new and useful matter, more than 50,000 Prices, embracing all the various trades connected with the operations of the Architect, Engineer, Builder, Contractor, and Surveyor; together with 10 000 useful and important Memoranda relating to the same. Also full Descriptions of various Stones for Building from the Quarries of England, Scotland, and Wales: Instructions for estimating and Contracting Calculations and Sketches of Groins and Wrought Iron Girders, Columns, the METROPOLITAN BUILDINGS ACT, &c. &c. The whole carefully revised and corrected to this date
SIMPKIN, MARSHALL, & CO, Stationers' Hall-court, E.C.
And all Booksellers in Town and Country.

PROPOSED RAILWAYS in LONDON and TEN MILES ROUND.—Preparing for Publication, a MAP of PROPOSED RAILWAYS and MISCELLANEOUS IMPROVEMENTS, deposited at the Private Bill Office, November 20, 1864, for Session 1865; also the Railways in Operation, Constructing, and Sanctioned. Price, in Sheet, 2*s.* 6*d.*; Mounted, in Case, 4*s.* 6*d.*
London: EDWARD STANFORD, 6, Charing cross, S.W; and all Booksellers.

Just published, in demy 8vo, with Illustrations, price 2*s.* 6*d.*

A TREATISE on SMOKY CHIMNEYS, THEIR CURE and PREVENTION
By FREDERICK EDWARDS, Jun. Author of "The Economical Use of Fuel and the Prevention of Smoke in Domestic Fire-places."
London: ROBERT HARDWICKE, 199, Piccadilly.

In post 8vo. with Portrait, price 7*s.* 6*d.* cloth.

MEMORIALS of the late F. O. FINCH, Member of the Society of Painters in Water Colours, with Selections from his Writings.
London: LONGMAN, GREEN, & CO. Paternoster-row.

CRAWFORD.—If — CRAWFORD, Carpenter, who was in October and November last WORKING for Messrs. W. HARRISON & SON, 133, Upper Thames-street, will send his present Address to them, he will confer a favour.

Secretary (pro tem.)—Henry J. Dowden.
Temporary Offices—62, Old Broad-street, E.C.
PROSPECTUS.
This Company is formed for the purpose of erecting in the City of London a Public Auction Mart for the sale of landed estates and other property now absolutely necessary in consequence of the late Auction Mart recently situate in Bartholomew-lane, City, having been converted to other purposes and the insufficient accommodation afforded to the public elsewhere.
The Directors have secured on favourable terms an extensive freehold site in Tokenhouse-yard, next to the offices of the General Credit Company, having a frontage of upwards of 100 feet. The site is admirably adapted to the requirements of the undertaking, not only from its central position, being close to the Bank of England, the Royal Exchange, the Stock Exchange, and the principal banking houses and establishments connected with the Money Market, but from the street advantage it possesses in being free from the noise and disturbance of a leading thoroughfare.
The Directors propose to erect on the site of the existing houses, a handsome and substantial building, containing on the ground and first floors several large and smaller Sale Rooms, with a spacious Entrance Saloon on the ground floor, on the second and third floors, which are to be approached by a separate entrance and staircase numerous rooms and other accommodation, which can either be used, as Sale Rooms, or for auctions, or let for offices. The basement will contain suitable refreshment accommodation and additional cellarage or offices to be also let off.
It is proposed to keep a classified Register of the prices of property sold at the Auction Mart, on the principle of the present Estate Exchange, to which Shareholders will have access on payment of a small fee, thus affording a useful reference for the purpose of valuations and otherwise.
The revenue of the Company will consist:—First, of rents to be received from the auctioneers for the use of the Sale Rooms, the demand for which is constantly increasing. Secondly, from rent to be received in respect of the Refreshment Department; and thirdly, from rents to be received for the Offices, Arbitration Rooms, Cellars, &c. from which sources the Directors confidently expect a most satisfactory dividend will be realized.
The Directors are desirous that the undertaking should be supported by their professional brethren, and applications for Shares from auctioneers both in London and the country will therefore receive a preference in the allotment.
The undertaking originates with the Directors. There will be no "promotion money" paid to any one either directly or indirectly, and the preliminary expenses will be confined to such as are actually necessary to be incurred.
The Articles of Association can be inspected at the Offices of the Solicitors to the Company.
The Shareholders will incur no liability beyond the amount of Shares allotted to them. Applications for Shares must be made upon the annexed Form. Each applicant will be required to pay to the Bankers of the Company 1l. per Share on the number of Shares applied for; and upon allotment, to make a further payment of 4l. per Share on the Shares allotted to him. The remaining Calls will be made at such times and for such sums as the requirements of the Company demand
If no allotment be made the deposits will be returned in full.
Prospectuses and Forms of Application for Shares may be had of the Solicitors; or of the Secretary, at the Temporary Offices, 62, Old Broad-street, E.C.

NORWICH UNION FIRE OFFICE.—THE BONUS YEAR.
THREE FIFTHS of the Profits of the Company are periodically distributed as a Bonus to parties insuring, who have thus from time to time received from the Society sums amounting in the aggregate to nearly 440,000l.
A FURTHER BONUS of 52.997% has been declared in respect of Premiums paid prior to Michaelmas, 1863, and will be paid by deduction from the current Premium, on the renewal of existing Insurances.
EXAMPLES OF PREMIUMS REDUCED BY THIS BONUS.

No. of Policy.	Sum Insured.	Annual Premium.	Reduced Premium for 1864.
	£	£ s. d.	£ s. d.
441,411	92,540	222 4 4	120 19 2
460,136	12,000	63 0 0	35 0 0
484,173	6,800	35 14 0	19 16 8
503 975	5,000	7 10 0	4 6 4

THE RATES OF PREMIUM ARE IN NO CASE HIGHER than those charged by the other principal offices giving no Bonus to their Insurers.
No charge is made for the Policy or Stamp when the Insurance exceeds 200l. or for Insurances transferred from other Offices
The Business of the Company exceeds Seventy Millions, and, owing to the liberality with which its engagements have been performed, is rapidly increasing. The duty paid to Government for the year 1863 was 84,192l. 1s. 7d.; the amount insured on Farming Stock was 10,203,279l.
The Norwich Union Fire Office is the LARGEST OFFICE making a return to its Insurers.
For Prospectuses, apply to the Society's Offices, 29, Fleet-street, E.C.; and Surrey-street, Norwich.

BUILDINGS AND SHIPS EFFECTUALLY SECURED AGAINST LIGHTNING.
PATENT LIGHTNING CONDUCTORS,
according to the system of Sir Snow Harris, F.R.S. as now universally adopted in every department of the Public Service, supplied and carefully fitted in every detail, under the immediate instructions of Sir Snow Harris, by J. W. GRAY, who has effectually secured a large number of ships, public buildings, and magazines against the destructive agency of lightning, including the Houses of Parliament, magazines, afloat and on shore, of the War Department, and many churches and other important structures. Buildings surveyed, and plans and estimates submitted, if called for.
J. W. GRAY & SON, 114, Fenchurch-street, E.C.

LITTLE CASTERTON FREESTONE.
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD,
The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, and is much used for waterworks, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE is used largely by London Builders.

CAEN and AUBIGNY STONE.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. When sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such stuff. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

MR. GEORGE FURNESS

Having increased his machinery appliances for the Manufacture of Bricks by erecting a number of the most approved patent machines, Architects, Builders, and Contractors are respectfully informed that they can be Supplied with GAULT BRICKS of the best quality, and at moderate prices. — Prices and particulars furnished on application to

MR. SLATER,

Thames Embankment, Cannon Wharf, Westminster.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of

J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two-fold.

1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 33 to about 10 per cent of the total make, which in itself represents a large permanent saving.

2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.

Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

BRICKS, PANTILES, AND PAVINGS.

J. H. ANDREWS, Wisbech, of

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to

DOULTON & WATTS, LAMBETH POTTERY,

LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and ground floors, under cements and floorings. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

CROGGON & CO. 2, DOWGATE HILL, LONDON; 2, GOREE PIAZZA, LIVERPOOL; And 69, GEORGE SQUARE, GLASGOW.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's  Royal Letters Patent.

Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great National shows it has been exhibited and OBTAINED THE PRIZE, on being the cheapest, best to lay, and adapted for most climates at the Royal Agricultural Society's House in Hanover square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 36 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully required to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their reels. The original works where the above roofing is made are F. McNEILL & CO.'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with M'NEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

COMPETITIONS.

TO ARCHITECTS.—The Town Council of the City of Newcastle are prepared to receive PLANS and SPECIFICATIONS for the ERECTION of a PUBLIC and LOWER SCHOOL HOUSE, on the Bell's Close Estate, Sandgate, for the education of 300 Boys and the CONVERSION of the House at present standing thereon into a convenient RESIDENCE for a MASTER, at a cost not exceeding £2000. Such Plans and Specifications to be sent to me, at my Office, on or before the 31st of JANUARY next.
CHAS MARSH LEE, Town Clerk.
Public Offices, Salisbury, December 19th, 1864

SWANSEA INFIRMARY. — The Committee of the Swansea Infirmary are desirous of receiving PLANS and ESTIMATES for the NEW HOSPITAL for 100 BEDS, to cost not exceeding £2000 per Bed. Plans to be sent in to the Secretary, on or before the 1st of FEBRUARY, 1865.
GEO. I. STROUD, Secretary.
No. 6, Heathfield-street, Swansea, December 2, 1864.
N.B. The secretary will reply to the various letters received after the next meeting of the committee.

CONTRACTS.

COAST GUARD CONTRACT.—
NOTICE to BUILDERS and CONTRACTORS.
Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Ramsgate, in the county of Kent, may inspect the Drawings and Specifications at the Walmer Boat Station, Ramsgate, at the Office, between the hours of TEN and FOUR, from MONDAY, the 2nd, to TUESDAY, the 24th day of JANUARY, 1865, and both inclusive (Sundays excepted).
Tenders to be sent in to the Office not later than TWELVE o'clock at noon, of the 25th JANUARY 1865, under seal, and directed to the Commodore Controller-General of Coast Guard, and endorsed "Tender for Ramsgate Station."
The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or any Tender.
Dated this 15th day of December, 1864, at the Admiralty, Coast-Guard Office, 12, Spring gardens, London, S.W.

TO BUILDERS, MILLWRIGHTS, and OTHERS.—STAFFORD COUNTY PRISON.—Persons disposed to TENDER for the ERECTION of TREAD WHEELS, CORN MILL, and KITCHEN at the above named Prison may inspect the plans, specification, and conditions, and obtain bills of quantities, at my Offices on and after TUESDAY, the 20th, until THURSDAY, the 29th of DECEMBER. A deposit of £1 1s. will be required for each copy of quantities, which will be returned if not further submitted. Tenders for the works. Tenders must be delivered at my Offices by TEN o'clock a.m. on THURSDAY, the 29th DECEMBER, but neither the lowest nor any Tender will necessarily be accepted.
ROBERT GRIFFITHS, Architect and County Surveyor.
County surveyor's Office, Eastgate-street, Stafford,
December 14, 1864

TO BUILDERS, &c.—Parties desirous of CONTRACTING for the ADDITIONS and ALTERATIONS to the PAVILION of the Marylebone Cricket Club, are requested to communicate, by letter only, with the Architect, Mr. HARRY E. NEWTON, 6, Argyll-street, Regent street, W.

TO BUILDERS and CONTRACTORS.—The Burton-upon-Trent Improvement Commissioners, as the Rural Board for that District, are prepared to receive TENDERS for FORMING the ROADS and DRAINS, Laying out the Ground and Fencing, and for the Erection of Two Chapels, Lodges, Entrance, Boundary Walls, &c. at the proposed new Cemetery, South Clifton Hill, near Burton upon Trent. The plans, specifications, and copies of quantities can be seen at the Commissioners' Offices, High street, Burton; or at the Offices of the Architects, Messrs. LUCY & LITTLER, 9, James street, Liverpool. Tenders, endorsed "Tender for Cemetery Works," addressed to the Chairman, Burton Improvement Commissioners, are to be sent in on or before the 3rd day of JANUARY, 1865. The Boards do not bind themselves to accept the most or any Tender, and the contractor will be required to find sureties for the due fulfilment of the contract.—By order
Burton, December 12, 1864 WM COXON, Clerk.

TO MILLWRIGHTS and ENGINEERS.—CONTRACT for TREADWHEELS.—The Visiting Justices of the House of Correction, Wakefield, will meet at the House of Correction on FRIDAY, the 30th of DECEMBER instant, at ONE o'clock, to receive TENDERS for the CONSTRUCTION, FITTING, and PAINTING of NEW TREADWHEELS, as directed Prop. The whole, strong, solid timber work on which the Machinery is to be fixed will be provided by the Visiting Justices. The plans and specifications can be seen on application at the Prison on any week day but Friday, between the hours of ELEVEN and THREE. Tenders are to be sent in addressed to the Visiting Justices at the Prison by TWELVE o'clock on FRIDAY, the 30th instant, at the place aforesaid, to be written upon at One on that day, properly with the names of two responsible parties for the due performance of the Contract if the Tender be accepted. The Contract will be prepared at the expense of the Visiting Justices. The Visiting Justices do not bind themselves to accept the lowest or any of the Tenders JOHN S. SHAIPE,
14th December, 1864. Clerk to the Visiting Justices

CONTRACTS.

TO BUILDERS and OTHERS. TENDERS are required for TAKING DOWN and CLEARING AWAY a MANSION HOUSE called Sinkarth-upon-Test Stanford-in-Ashe, Hants. Tenders to be made out by Builders on and after the 24th instant.—Tenders to be delivered to me on MONDAY, JANUARY 2, 1865, up to Noon o'clock, p.m.
EDWARD BROWNING, Architect, Stamford.
December 15, 1864.

CORPORATION of MANCHESTER. To BUILDERS.—The Cemetery Sites Sub-Committee are prepared to receive TENDERS for the ERECTION of the intended BUILDINGS at the new Cemetery, near Manchester, consisting of three separate Chapels, offices, and Lodge for the registrar, two Lodges, and two entrances. Drawings, and specification, and conditions of contract, may be seen at the Offices of the Architects, Messrs. PAULL & AYLIFFE, Infirmary buildings, 21 Cross street, Manchester. Quantities will be furnished, and may be ordered of the Architects, upon deposit of £2 for each set, the said deposit to be returned to all builders from whom bona fide Tenders are received.—Sealed Tenders, endorsed "Tender for Cemetery Buildings," and addressed to the committee, must be delivered at the Office of the Architects, not later than TEN o'clock a.m. on MONDAY, the 16th of JANUARY, 1865. The Tenders may be for the whole of the works, or for the masonry, &c. separately.—By order
JOSEPH HERON, Town Clerk.
Town-hall, Manchester, 5th December, 1864

N.B. Early application for lists of quantities should be made by letter, to the Architects, that the requisite number of copies may be ordered

CROYDON LOCAL BOARD of HEALTH. CONTRACT for SEWER TRENCHES.—Notice is hereby given, that the Croydon Local Board of Health are prepared to receive TENDERS from persons desirous of CONTRACTING with them for the EXCAVATION and RE-FILLING of 7,000 lineal yards of TRENCHES for SEWERS, in accordance with the specification prepared by Mr. BALDWIN LATHAM, C.E. their Engineer. The specification may be seen at the Engineer's Offices, in the Town Hall, Croydon, on or after this date, sealed Tenders, addressed "Tender for Sewer Trenches," are to be delivered at the Office of the Local Board, in the Town Hall, Croydon, on or before FOUR o'clock in the afternoon of TUESDAY, the 3rd day of JANUARY, 1865. The Local Board do not bind themselves to accept the lowest or any Tender.
HENRY RICHARDS, Clerk to the Board.
Town Hall, Croydon, December 14, 1864.

TO CONTRACTORS.—RHYL PROMENADE PIER COMPANY (LIMITED).—The Directors are desirous of receiving TENDERS for the ERECTION of an IRON PIER into the Sea at Rhyl, 1,050 yards long.—Plans and specifications may be seen upon application to Mr. W. WYNNE, the Secretary, Bee Hive Hotel, Rhyl. The Contractor will be required to take a portion of the amount of his contract in paid up shares of the Company. The Directors do not bind themselves to accept the lowest or any other Tender.

LUNATIC ASYLUMS, IRELAND.—TENDERS are invited for the CONSTRUCTION of STEAM BOILERS, Apparatus for Cooking by Steam, Pumping and Pumping Engine and Pipes to convey steam to the Outhouses, Lighting to be laid on, Well Sinking, &c. for the Asylum at Castlebar, in the County of Mayo, and Letterkenny, in the County of Donegal.—Particulars can be seen at the Office of Mr. WILKINSON, Architect, 10, Westland-row, Dublin. Tenders, endorsed "Tender for Steam Works for —— Asylum," to be sent in or delivered, addressed to R. M. ARMSTRONG, Esq. Secretary to the Lunatic Asylums of Ireland, the Castle, Dublin, on or before the 5th day of JANUARY next. The lowest or any Tender will not necessarily be accepted.
December 14, 1864

LUNATIC ASYLUM, CASTLEBAR. To GAS-FITTERS.—TENDERS are invited for PROVIDING 120 LIGHTS for the above Asylum, including main pipes, gas stove, and all other incidental works.—Specification and particulars to be seen at the Office of Mr. WILKINSON, 40, Westland Row, Dublin.—Tenders to be sent to R. M. ARMSTRONG, Esq. Secretary of the Commissioners of Control, the Castle, Dublin, on or before the 5th JANUARY next. The lowest or any Tender will not necessarily be accepted.

TOTNES (SOUTH DEVON) WATER SUPPLY.—To IRONFOUNDERS.—Persons desirous of SUBMITTING TENDERS for the SUPPLY and DELIVERY of CAST-IRON WATER-PIPES (cleared by Dr. Angus Smith's process), at Totnes, South Devon, can inspect the drawings and specification, at my Office, in Torquay, on and after MONDAY, JANUARY 2, 1865. Tenders, endorsed "Totnes Water-supply," to be sent to me, on or before JANUARY 17, 1865. There is water and railway communication with Totnes.—The lowest or any Tender will not necessarily be accepted
EDWARD APPLETON, Assoc. Inst. C.E.
Torquay, December 20, 1864.

HACKNEY UNION.—To BUILDERS and OTHERS.—ENLARGEMENT of SCHOOL BUILDING. Notice is hereby given, that the Guardians of the Poor of this Union are ready to receive TENDERS, and to Contract for certain New Buildings, at the Schools, at their Union House, according to the plans, specifications, and conditions, which may be seen upon application to the Master, any week day before TUESDAY, the 10th day of JANUARY, 1865, between the hours of ELEVEN and THREE o'clock. Persons tendering for the performance of the works, are required to deliver their New Bills at the Schools, to be sent to the Clerk, at the Union House, on or before TUESDAY, the 10th day of JANUARY, 1865, at which time all such Tenders will be opened in the forenoon of the same day, at TWELVE o'clock, when the parties tendering must be in attendance, to answer when called for. Payment to be made upon the certificate of the surveyor to the Guardians, when one-half of the gross value of the works executed from time to time shall have been certified. Each Tender must be accompanied by the names of two responsible parties willing to enter into sureties for the due performance of the Contract, if the Tender be accepted. Dated this 8th day of December, 1864.—By order of the Board of Guardians,
CHARLES HORTON PULLEY, Clerk.
Hackney Union, Lower Homerton, N.E.

[For remainder of Contracts see next Page.

PARISH of CHELSEA, in the County of MIDDLESEX.—GRAVEL, &c.—The Vestry of this Parish will meet at the Vestry Hall, King's-road, Chelsea, on TUESDAY, the 3rd day of JANUARY, 1865, at THREE o'clock in the afternoon precisely, to receive TENDERS from persons willing to Contract until the 24th day of September, 1865, for the SUPPLY of the Best Clean, Sifted, Pit Road GRAVEL, SHINGLE, and the GRAVEL HOGGING, to be delivered upon the roads or footpaths, at Kensal New Town, Harrow-road, and Kilburn lane, at such times and in such quantities as may be directed. The Vestry do not bind themselves to accept the lowest or any Tender. Sealed Tenders signed by the proposed Contractor, and the names and description of two sufficient Sureties for the due performance of the contract, to be delivered to the Clerk, by or before TWELVE o'clock on TUESDAY, the said 3rd day of JANUARY. No Tender will be received or accepted, unless made on one of the printed forms, to be obtained at the Office. By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's-road, Chelsea, December, 1864.

PARISH of CHELSEA, in the County of Middlesex.—NEW MOUNT SORREL BROKEN GRANITE.—The Vestry of this Parish will meet at the Vestry Hall, King's-road, on TUESDAY, the 3rd day of JANUARY, 1865, at THREE o'clock, to receive and consider any new TENDERS (sealed) for the CONTRACT, until the 30th day of SEPTEMBER, 1865, for the supply of the best MOUNT SORREL BROKEN GRANITE, to be delivered on the Barrow and Kensal Stones, at such times and upon such parts of Roads as the Vestry may direct. The Vestry do not bind themselves to accept the lowest or any Tender. Sealed Tenders, signed by the proposed Contractor, with the name and description of two sufficient sureties for the performance of his contract, to be delivered to the Clerk, by or before TWELVE o'clock on TUESDAY, the said 3rd day of JANUARY. No Tender will be received or accepted, unless made on one of the printed forms, to be obtained at the Office. By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's-road, Chelsea, December, 1864.

TO DUSTMEN, BRICKMAKERS, and SCAVENGERS.—The Crown Estate Paving Commissioners hereby give notice that they are ready to receive TENDERS from persons willing to enter into a CONTRACT for the REMOVAL of DUST, DIRT, ASHES, and CINDERS, from the Houses within the district under their jurisdiction, for the term of ONE YEAR, from the 29th day of JANUARY, 1865, specifications and forms of Tender for which may be had on application at the Paving Commissioners' Office, No. 1, Whitehall-yard, Horse Guards, S.W., where Tenders, sealed and addressed to the Crown Estate Paving Commissioners, and described "Tenders for Dust," are to be delivered before or before ONE o'clock on WEDNESDAY, the 4th day of JANUARY, 1865.

FRANCIS ADAMS, Clerk to the Commissioners.

1 Whitehall-yard, 20th December, 1864.

TO WELL-SINKERS, BORERS, and others.—The Directors of the Northampton Water-Works Company are desirous of having TENDERS for DEEPENING and REPAIRING their present WELL in Northampton. The work will consist of taking down the brickwork to the depth of 30 feet of the present well, 8 feet 6 inches diameter; providing and sinking about 60 feet of cast iron cylinders, 8 feet diameter; deepening the well about 100 feet; turning the same with 18 inch brickwork in cement; and other works at Northampton. The Contractors must be prepared to satisfy the Engineer of their ability to execute the work by reference to other works of the same description executed by them, before they can be allowed to execute this. The printed specification and Form of Tender, can be seen at the Offices of the Engineers, Messrs. EASTON, AMOS, & SONS, The Grove, Stamford, London, S.E.; also at the Water Company's Office, No. 5, Newland, Northampton.—Tenders (enclosed in a sealed envelope) endorsed "Tender for New Well," to be sent to the Secretary, No. 5, Newland, Northampton, on or before the 23rd day of JANUARY, 1865. The Directors do not bind themselves to accept the lowest or any Tender.

TO BUILDERS. Persons desirous of TENDERING for the ERECTION of NEW BANKING PREMISES at Bath are invited to apply for the Local and Chief Bank, and inspect the plans and specification at my Offices, on and after THURSDAY, the 5th of JANUARY, when Tenders will be received before ELEVEN o'clock A.M. on MONDAY the 16th of JANUARY, at the London and County Bank, 21 Lombard-street, London. The lowest or any Tender will not necessarily be accepted.

PHILIP O. CHANCELLOR, Architect,
Parsonage Chambers, Old Broad-street, London.

BY HER MAJESTY'S ROYAL LETTERS PATENT FOXLEY'S CORRUGATED BRICKS, For GARDEN WALLS.

Are ornamental, cheap, and durable; the most efficient remedy as yet for all the evils attending the present system of training fruit trees.

A comparison with the old iron tiles or bricks are only one tenth of their cost, and will last as long as the wall stands. The heading furnishes a protection against the spring frosts, and prevents cold draughts; while the trellis, by leaving a clear space behind the trees, carries away all moisture. Any kind of trees can be trained, and espaliers, and instead of preventing, increases the accumulation of insect and bird life. It may certainly be said that there is no wall for fruit-trees; but, at any rate it is safest to have only a brick wall, and decidedly better to have such a wall as will furnish, at the least cost and trouble, the largest quantity of the finest fruit. The Patentee challenges the whole world to produce anything comparable with these bricks—for shape.

They are now in use everywhere, and need everywhere. The principle so plain and simple, that a child may understand it, and requires no argument or trial to prove its benefits.

The patent of the Patentee, Mr. J. Foxley, of further particulars, on application to FOXLEY'S Agency, 8 Strand, Bricks and Tiles may be had for trial, to make the flowers to try for themselves, as they are not already up, at

BRICKS, PANTILES, AND PAVINGS.

J. H. ANDREWS, Wisbech, offers

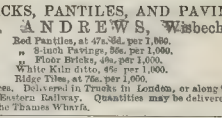
AYLESFORD and BURHAM BRICK WORKS, near Maidstone, Kent. MR. GEORGE FURNESS

Having increased the mechanical appliances for the Manufacture of Bricks by erecting a number of the most approved patent machines, Architects, Builders, and Contractors are respectfully informed that they can be Supplied with GUALT BRICKS of the best quality, and at moderate prices. — Prices and particulars furnished on application to

MR. SLATER, Thames Embankment, Cannon Wharf, Westminster.

TO BRICKMAKERS. — All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of

J. B. WHITE & BROTHERS, Erith, Kent.



The advantages of this plan are two-fold.

1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.

2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.

Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

JOHN ARCHBUTT & SONS, 201, Westminster bridge-road, Lambeth, near Astley's Theatre

Orders requiring Despatch and Punctuality can be executed in a few days.

VENTILATION.—OVERCROWDING.—Boyle's System of Natural Ventilation ensures a *more* healthy condition of atmosphere in overcrowded than is usually present in thinly-inhabited or empty places. The heat arising from the state of overcrowding is the motive power which works this system with infallible regularity and effect. The smaller, closer, hotter, and more overcrowded a place is, the easier and better can it be ventilated on this system. It is applicable to all places alike, Cottages, Mansions, Public Halls and Buildings, Churches, Hospitals, Factories, Work-rooms, Stables, Cow-houses, Conservatories, and even Mines and Ships. Let no one form a hasty conclusion from the seeming extravagance of this statement. It is a far wiser plan to examine first and conclude afterwards.

"In one instance under our own eye Mr. Boyle has operated very successfully."—Article, "Air in the Corners," *Builder*, 15th October, 1864.

THOS. BOYLE, No. 23, Little St. Andrew-street, Upper St. Martin's-lane, London. Agents, Messrs. COMYN, CHING, & CO., at same address.

AUSTIN'S IMPERIAL PATENT SASH
and BLIND LINES.
To BUILDERS, CARPENTERS and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

FIRE-PROOF CONSTRUCTION.—
FOX & BARRETT'S PATENT.
This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought iron filled in with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation, adapted to receive a finished surface, either of the ordinary description, of wood, as boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as saving the necessity for cast iron girders and brick arches, and obviating the great desideratum of fire proof construction, even for many dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
12, YORK BUILDINGS, ADELPHI

NAILS and IRONMONGERY
from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails Iron, and Ironmongery to any amount at the
LOWEST BIRMINGHAM PRICES.
A complete List of which will be forwarded upon application to
FRANCIS BIANCHI (late Blyth & Bianchi),
Nail Manufacturer and General Factor, BIRMINGHAM,
and 15, Gresham street, London, E.C.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees, England and Canada,

A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens, London."

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES. MUSGRAVE'S PATENT IRON COW-STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under directions of London Architects, noted for adopting only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT BLOW-COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

THE PRIZE MEDALS

LONDON, 1851. PARIS, 1855. LONDON, 1862.

Awarded to

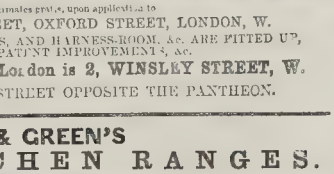
COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.

For Progressive and General Improvements in

STABLE FITTINGS AND HARNESS BRACKETS.

AWARDED A PRIZE AT THE PARIS EXHIBITION,
PATRONIZED BY THE ENGLISH AND FRENCH GOVERNMENTS, AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND
BUYING ESTABLISHMENTS IN THE KINGDOM
IN USE AT HER MAJESTY'S STABLES, ALDERSHOT AND BALMORAL



COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENABELLED MANGER, Water-trough, and Wrought-iron Rack, with the Iron Top Plate, and furnish specifications and detail Drawings, having COTTAM'S Patent Nut-less Hinge-screw and Cast-iron attached, which is taken to the back of the Manger, and works with ease and freedom up or down the guide bar.

COTTAM'S NEW PATENT SEED BOX, an important addition to the appointments of the Stable, and one which will, no doubt, prove a boon and a convenience to the horse.

COTTAM'S PATENT PERMANENT ATTACHED DRIP-COVER for the above is a most essential addition to protect it from the weather in the way, as the Seed-box and rack in all the old-fashioned Cheltenham Manger-fittings, and thereby keeping the contents of the trough clean, and also adding the practicity to be taken, is made sufficient to admire the above.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

COTTAM'S IMPROVED WROUGHT IRON VENTILATING BRACKET preserves the shape, and allows the free admission of air to the under parts of the saddle.

COTTAM'S IMPROVED SURFACE GUTTER, with perforated metal cover, the use of which prevents accidents, and can be easily cleaned out.

COTTAM'S CAST-IRON SANITARY TRAP, from its improved construction gives a full water-passage, and does not allow any smell to ascend from the drain.

PATENT LOOSE-BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

Illustrated Catalogues and Estimates gratis, upon application to

COTTAM & CO. 2, WINSLEY STREET, OXFORD STREET, LONDON, W.

WHERE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS-ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.

COTTAM & CO.'S only address in London is 2, WINSLEY STREET, W.

N.B.—WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

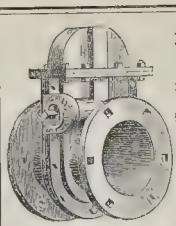
BROWN & GREEN'S
PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c. they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,



72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

VAVASSEUR & CO.

GALVANIZED IRON AND ZINC WORKS, SUMNER STREET, SOUTHWARK, S.E.

"By Royal Letters Patent."

"Indicator" Dial, 2½ in. diameter.

ELECTRIC BELLS FOR DOMESTIC USE.

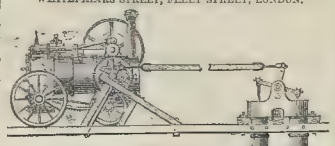
BREGUET'S PATENT INDICATOR SYSTEM, with a Dial which shows when the Bell is ringing, the same as in use at the Grand Hotel, Boulevard des Capucines, Jockey Club, &c. Paris.

The superiority of Electric Bells is already settled in America and in France. For all modern works at Paris they have so effectually superseded the old crank and pull plan as, for travelling, the railway has superseded the antiquated stage-coach.

ADAMS & SON have much pleasure in stating that they have made arrangements with Messrs. Breguet, of Paris, to become their sole Agents for the sale and fixing of their Patented Apparatus upon the "indicator system," which has great advantages over all others, and is especially adapted for hotels, public buildings, and other large establishments. The details of this ingenious instrument, together with a description of the various apparatus in use for Electric Bells, may be had upon application, or by post.

WILLIAM S. ADAMS & SON,

Ironmongers by appointment to the Queen and his Royal Highness the Prince of Wales, and also to the principal London Clubs,



Engineers and Manufacturers, 57, Haymarket, and 14, Norris-street, S.W.

With or without Double Pumps, from 8 inch to 24 inch Barrels.

Also CENTRIFUGAL and OTHER PUMPS.

A large Stock of the above is always kept, as well as CRABS, BLOCKS, HOISTING TACKLE, BORING TOOLS, and other Contractor's Plant, manufactured by CLINTON & OWENS

DAVID JONES, BRIDGE IRON-WORKS, and HERBERT'S PARK IRONWORKS, Bilston, Staffordshire, Manufacturer, under License of the Patentee, of MALLET'S PATENT BUCKLED IRON PLATES,

for Flooring, for Railway and other Bridges, Viaducts, Wharfs, &c. and for the Flooring and other parts of Fire-proof Buildings, and various important structural uses. These plates form the lightest, strongest, most rigid, and durable flooring known. They were pronounced by the late Mr. Brunel, "the best bridge flooring extant." They have been adopted at the New Bridge, Westminster, on the Indian Railways, and in many other first-class structures, by Messrs. Page, Hawkshaw, Rendell, Stephenson, and other Engineers; and for Fire-proof Buildings by Government, the War Office, Metropolitan Board of Works, and other important uses.—Application for lithographic circulars, prices, and other information as to supply of the Plates, to be made to the Manufacturer as above, or to ROBERT MALLET, Esq. C.E. the Patentee, 11, Bridge-street, Westminster. N.B. Manufacturer of Boiler Plates, Bridge and Ship Plates, also Sheet Iron of all kinds, and Rivet Iron of first quality. Address, BRIDGE IRON WORKS, Bilston, Staffordshire.

THE PATENT UNIVERSAL CHIMNEY HEAD.

This Chimney Head has been designed for the Prevention of Smoky Chimneys and Down Draughts. The numerous side apertures are so placed as to guide the wind upwards as it strikes the head from any quarter, thus creating a strong current and assisting the exit of the smoke through the top. The same apertures give ready egress to the wind on all sides in case of its striking downwards from above, and thus greatly diminish the danger of its passing down the chimney.

Price in Zinc	23s.
Ditto, Kitchen size	25s.
Price in Galvanized Iron	29s.
Ditto, Kitchen size	35s.

A Liberal Allowance to the Trade.

Manufactured solely by

BENHAM & FROUD,

GENERAL METAL WORKERS,

41, 42, and 43, Chandos-street, Covent-garden, London, W.C.

And to be obtained of all respectable Ironmongers in London and Country.

SMOKY CHIMNEYS. — The Best Cure is the PATENT ALBERT CHIMNEY CAP, 260 on Buckingham Palace; in use also at St. James's Palace, Windsor Castle, Government buildings, mansions, halls, club-houses, and hundreds of others. Prospectus sent on receipt of two postage stamps

JAMES BARTON,

Iron Works, 370, Oxford-street, W.

N.B. Manufactory for the Patent Stable Fittings and Enamelled Mangers.

SMOKY CHIMNEYS,

S. DEACON

Respectfully invites the attention of Architects Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many cure chimneys where other caps have been of no avail.

The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage Stamp, by

S. DEACON,

59, ALMA STREET, HOXTON, N.

MANUFACTORY:

HEMSWORTH STREET, SAINT JOHN'S ROAD, HOXTON, LONDON, N.

A PRIZE MEDAL for SUPERIOR LOCKS

has been awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions, Glass, and Wire Furniture, of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilators, &c.; and the New Registered Venetian Ventilator, so much admired, 6s. 6d. each.

J. H. BOOBBYER (late STURCH & BOOBBYER), established nearly 200 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.

14, Stanhope-street, Newcastle-street, Strand, London, W.C.

ROBERT MACLAREN & CO.

EGLINTON FOUNDRY, GLASGOW.

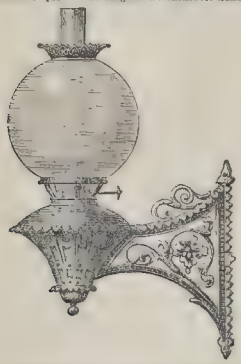
Manufacturers of all sizes of CAST IRON MAIN PIPES, for Gas or Water, by an IMPROVED PATENT.

GENERAL IRON FOUNDERS, GAS ENGINEERS, and WROUGHT IRON TUBE MAKERS.

IRON ROOFING of CORRUGATED IRON,

Wrought Iron, principal Roofs covered with Slates, Iron Bridges Girders, and Railings; also Portable Buildings for Dwellings, Farm Purposes, Churches, Chapels, Schools, Theatres, Concert or Dancing Rooms, &c. suitable to all Climates, fixed complete in town or country, or packed for exportation.

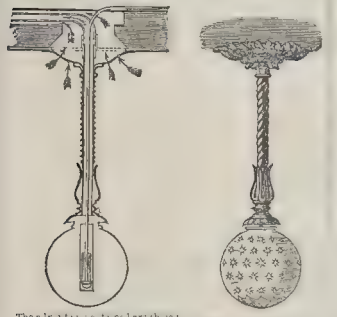
For Designs &c. Estimates apply to



RANDAL STAP & CO. Contractors,

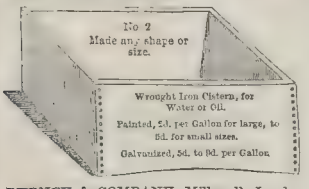
No. 32, KING WILLIAM STREET, E.C.

Where numerous Drawings and Photographs may be seen.



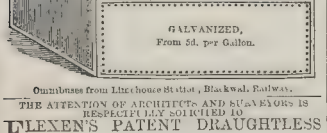
N.B. The Iron Buildings manufactured by R. STAP & CO. are not fixtures on Leasehold Property.

THE KOH-I-NOOR LAMP, to BURN HYDRO-CARBON OILS,
Possess important advantages and facilities for trimming.



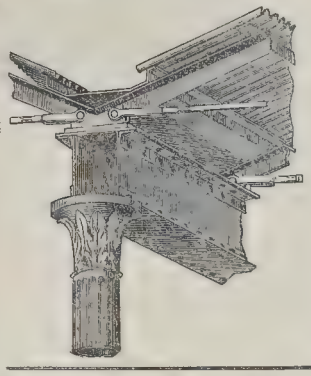
BRACKET and HANGING LAMPS, for CHURCHES, CHAPELS, and PUBLIC BUILDINGS, MANUFACTURED by
JOHN WARNER & SONS,
CRESCENT, CRIPPLEGATE, LONDON, E.C.
Catalogues forwarded on application.

FRANCIS HAMMOND'S
VENTILATING GLOBE LIGHT,
combining an agreeable method of lighting, with convenient, simple, and effectual ventilation



The advantages of the above are these:—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume about 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 21 feet per hour.
No. 5, CHANDOS STREET, CHARING CROSS, LONDON, W.C.

WROUGHT-IRON TANKS, CISTERNS, GUTTERS, FUNNELS, &c., plain or galvanized; CATTLE TROUGHS, IRON CART BODIES, &c.



BURNEY & COMPANY, Mill-wall, London.
Steam-boats from London Bridge call near the Factory.

JOHN BELLAMY,
BYNG STREET, MILLWALL, E.
WROUGHT IRON TANKS AND CISTERNS,
FOR WATER, OIL, AND TURPENTINE
CATTLE TROUGHS, GUTTERS, CART BODIES, &c.

Omnibuses from Limehouse Station, Blackwall Railway.

THE ATTENTION OF ARCHITECTS AND SURVEYORS IS RESPECTFULLY SOLICITED TO
FLEXEN'S PATENT DRAUGHTLESS VENTILATOR,
Now used in various leading establishments in London. It supersedes all others now in use, giving free ventilation, and excluding all draught and dust; requires no alteration of sashes, and effectually produces a cool atmosphere in the most heated apartment. In establishments where a great amount of gas is consumed, or steam generated, this Ventilator has fully carried out the required purpose. Office, 46, Skinner-street, Snow-hill, E.C. where models can be seen, references given, and all information obtained.

THE IMPROVED OPEN FIRE KITCHENER,
Manufactured by
WM. OWEN,
WHEATHILL FOUNDRY,
ROTHERHAM,

Possesses all the advantages of the ordinary Close Fire Kitchener, in having excellent Hot Plates on top of Ovens, for boiling, steaming, or stewing, with the additional advantage of having a thoroughly effective and deep OPEN Fire for roasting purposes.
The Ovens are heated upon Bradley's Patent Principle (under which W. O. possesses the sole right to manufacture), and by which a great economy of fuel is effected.
These Kitcheners are made of all qualities and sizes, suitable for all classes of houses, from the cottage to the mansion; and can be OBTAINED THROUGH ANY IRONMONGER in the UNITED KINGDOM.

WM. OWEN,
GENERAL IRONFOUNDER, STOVE GRATE AND FENDER MANUFACTURER,
WHEATHILL FOUNDRY, ROTHERHAM.

HENDERSON'S PATENT DERRICK CRANE. Prize Medals for Practical Utility and Moderate Cost.

HENDERSON'S PATENT DERRICK CRANE, so extensively used in the building of the Exhibition, London, is always in hand from the Makers, from 1 cwt. upwards, Portable, Foundry, Force, Wharf, Quarry, Warehouse, and other cranes, Hoists of various sizes, Steam Winches and Cranes (on the Derrick principle). Water Companies and others can also be supplied with our Improved Stone Valves.—For further particulars apply to BOWSER & CAMERON, Makers, Springfield Iron Works, M'Neil street, Glasgow.

GARDNER'S SUNLIGHT
GAS BURNER and FITTING ESTIMATES
Offer important advantages to Architects, Builders, and the Public generally. GARDNER'S, No. 453, Strand, Charing cross, four doors from Trafalgar-square, London.
ESTABLISHED 1752.

TO IRONMONGERS, BUILDERS, &c
PATENT WROUGHT-IRON WELDED TUBE for GAS; Galvanized ditto, for Water; High-pressure Cocks, &c. Manufacturers of Dr. ARNOTT'S Improved Ventilators.
HULETT & CO. 55, High Holborn.

DAY and GAS LIGHT REFLECTOR MANUFACTURER.—THOMAS FOX, 90, Hatton Garden, E.C. and 384, Charles-street, Hatton Garden, E.C. A large assortment of Silvered Glass Globes, Lamp Spares, &c. always on hand. All kinds of Bent Glass Silvered.
N.B.—The usual discount to BUILDERS and the TRADE.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
E. G. FISHER, 12, Manchester-buildings, Westminster.

Company's General Agency, 12, Manchester Buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

DESACHY'S FIBROUS PLASTER.

GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), flute and plain columns, panelled sides, all kinds of dosser, &c., for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street, the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

LONDON WORKS, 366 and 368, EUSTON ROAD, LONDON, N.W.

VENTILATION—PURE AIR.

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 188 (late 117 and 118), Union-street, Borough, London.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION
MAGNUS'S ENAMELLED SLATE
obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.

Trichy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico, S.W.

PEAKE'S TERRO-METALLIC TILES,
PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City road Basin, N. Study, that the trade term, "TERRO METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Juries," page 831, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tilleries," Tunstall, Staffordshire, as the first of the kind in the world.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862.

IMPERISHABLE TESSELATED
PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern-book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, Bond-street.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

GUTTA-PERCHA MILL-BANDS.—The Gutta Percha Company beg to state that the increasing demand for the Gutta-Percha Stiffening for Driving bands, Leatherstraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent compressibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA-PERCHA COMPANY, PATENTEES,
WHARF ROAD, CITY ROAD, LONDON.

CLOTHS and BAIZES.—
A large assorted STOCK of the above always on hand in all widths, colours, and qualities, at
HILL & SON'S,
Nos. 88 and 89, ST. MARTIN'S LANE, CHARING CROSS.

The Builder.

VOL. XXII.—No. 1142.

Condition of our Towns: Stirling.

THE river Forth at Stirling might form the subject of an interesting inquiry, if our object were to investigate the conditions of material prosperity and the growth of trade. There is an old proverb to this effect,—that he who does not know his way to the sea should follow the course of a river. If he did so at Stirling, he would get a roundabout or rather zigzag journey. For example, the distance to Alloa is only about six miles as the crow flies: but by the river it is something above twenty miles. However beautiful as a landscape these "links" and windings may be, they act as a powerful barrier to the extension of commerce. Indeed, partly from this cause, and partly from the decay of its local manufacture and salmon fishing, Stirling was gradually subsiding into a state of stagnation and atrophy, until it became a principal station of the Scottish Central Railway, which has vastly improved its condition. The neat and commodious station of this railway deserves notice,—if for nothing else, for its cleanliness,—a rare characteristic of Scotch railway stations.

The town of Stirling, as we have said,* has a very picturesque and rather quaint appearance, arising from the declivity of the Castle Rock upon which it is built, and its close proximity to the verdant links of the Forth. It is easy to see that it has extended greatly of late years. Many snug modern villas and terraces are creeping out in a landward direction, as if disdaining in its old age the protection of that venerable fortress which in fact gave birth to the town. The peculiarity of site gives also great facilities for thorough drainage; and it is an easy business to supply a town with water, when it is situate in the centre of a district of granitic mountains; but of these inestimable natural advantages Stirling seems to have only partially availed herself.

The water supply is, of course, abundant. In the year 1848 an Act of Parliament was obtained, by which power was given to certain commissioners to bring a supply of water from the neighbouring hills; which has been done up to a certain extent with great success. The town itself seems well supplied; and we were glad to perceive an efficient number of public wells in the principal thoroughfares and most densely populated wynds. But the neighbouring villages, such as Raploch and St. Ninian's, which now form almost part of the suburbs of Stirling, are still, as far as we can see, left without a supply. This, we think, ought to be amended; for it is precisely in these quarters that a good supply of water is productive of the greatest benefits. The water seems to be supplied on the constant service system; the quality of the water is excellent; the assessment up to this year, at all events, has been moderate; and, on the whole, we may rest satisfied with the condition of the Stirling water supply.

We wish it were possible to say as much for the drainage,—which, as far as it exists, is very bad (as the smell from the gully-holes informs us), but which over the larger part of the burghal area does not exist at all. The first maxim of the principles of modern drainage—*i.e.*, that every dwelling-house shall have a soil-pipe communicating with a common sewer,—does not seem to have been understood in Stirling up till within a very recent period. For example, Allan-park, which may be regarded as the Grosvenor-square of Stirling, and which cannot be more than thirty or forty years old, consisting of excellent self-contained three-floor houses, was originally planned without space for water-closets. The only convenience provided was in the garden behind the houses, right under the drawing-room windows,—an arrangement which is still common even in the best parts of the town. Of course, when the better class of houses were thus unprovided with water-closets, it would be in vain to look for such things in houses of the poorer classes. For their uses we ascertained there were two or three public places throughout the town, two of which we had the fortitude to inspect. The first was under the Corn Exchange Hotel, the second in a close in Baker-street; and the revolting condition of them both was such as we cannot venture to describe in our columns. Their construction was curious enough to arrest our attention: a large trough, of the ordinary description, was divided into seats, and roofed in with boards, like a dog's kennel, with holes cut in this boarding like the opening for an elliptical storm-window. Truly the most curious *cabevêts-de-convenance* we ever saw in respect to their covering, and probably adopted from motives of security to the inhabitants. It is to be understood that such places are only used by adult males and boys; for the women and children there remains only the old Scotch contrivance—the pails! Some people may think our examination of such places too minute; but let us look to the consequences. On the high roads to the Bridge of Allan, for example, a lady is never safe if she walk on the footpaths. Round the castle walks we observe here and there constructed rustic seats of stone and turf in shady recesses, where the lover of nature might safely take shelter from the heat of the sun or the high wind, and admire the beautiful prospect around. But few tourists, we imagine, can enjoy them; for they are all converted to the basest uses. Nor do the closes and wynds in the town escape the contamination. They are not so bad, certainly, as those we have seen in Edinburgh or Glasgow, for the tenements are not so large and lofty, and the population is not so thick; but the gutters flow with the same sort of abomination, and produce in due time their proper equivalents of disease. Dr. Thomson, a well-known medical authority in the district, some years ago pointed out that the cases of fever and small-pox in the Stirling wynds and closes exceeded those of the better quarters of the town by an enormous ratio.

In addition to these little sanitary difficulties, Stirling has its quantum of suffering inflicted in the shape of chemical works. In the centre of the pretty valley slope, which lies between Murray-place and the river, there are one or two manufacturers of parafine, and the products of the distillation of coal-tar. Such, at least, we suppose them to be, for a certain air of mystery is kept up in the works. But whatever their character is, the bad smells which they produce are intolerable, and must be highly pernicious and injurious to health. The gasworks, which are situate in the same neighbourhood, are not, as we can testify, free of very bad smells: these at least ought not to be difficult of cure. Of course, we heard on all sides complaints of the town council as guardians of the public health; and we are afraid we cannot acquit them of supineness. Some excuse for them may doubtless be found in the nature of Lord Rutherford's Act (the Health of Towns Act for Scotland), under which they exercise their powers of sanitary police. But the New General Police Act for Scotland would probably remedy this defect, and we recommend its adoption by all means. It is clear, however, that municipal government, as exercised in an ancient and royal burgh like Stirling, is not the proper exponent of sanitary reform. From what we could ascertain of the proceedings of the town council, by reading the local reports and otherwise, we could easily see that they are often composed of discussions about mere trifles,—such as the order of precedence in receiving the Prince of Wales at the station, the cost of the high constable's dinner, and whether a policeman ought to be checktaker at the cattle show.

One thing about the Stirling corporation we cannot excuse, and that is the failure to make a decent entrance, or, rather, exit, to the Castle Hill, from the north side. As it stands at present, a stranger may enter by the richly-wooded acclivity at the Dumbarton-road, and after walking round the footpath find there is no other mode of exit than a narrow circuitous passage through a series of filthy privies, dungheaps, and piggeries, the very smell of which is enough to obliterate all the sensations of pleasure he may have experienced in the distant view of Ben Lomond. The expenditure of a few pounds, at the very utmost, would make a decent and cleanly approach. Since we are on this subject, we may also point out that the banks of the river are sadly neglected. We do not refer so much to their noxious condition as to their absolute want, in certain places, of footpaths. Even to repair the footpaths which already exist would not cost much; and if a model be required, it is not far to seek. The old monks of Cambus-Kenneth Abbey seem to have had a magnificent terrace between their monastery and the river, and the example is not too old to imitate, although it does not proceed from a Presbyterian kirk.

We happened to be in Stirling during a serious fire. It broke out on the premises of an extensive baker and grocer, in Baker-street, whose bakehouse had been recently fitted up, at a great expense, with steam machinery. The fire was first discovered between the hours of seven and eight o'clock in the evening, and in a short time the whole interior of two massive stone tenements was completely given up to the flames, which shot upwards with a brilliant effect, and illuminated the sky for a distance of at least twenty miles around. The small body of police which Stirling can boast of were very active, and the old-fashioned town engines were speedily on the ground; but the miserable hose-pipes were shamefully inefficient: they burst and gave way in all directions, and a long delay occurred before a volume of water could be brought into play on the raging element. At one time considerable alarm was felt for the neighbouring property; the sparks flew thick over the Royal Hotel into Murray-place; and had it not been for the stout old walls of freestone rubble, which resisted the heat evolved from the burning timber, we might have had to record a more startling result. As it was, the credit of putting out the fire, or, rather, of preventing the fire spreading, is due to the military in the castle, the whole battalion being immediately ordered out, under the command of Colonel Nugent. Their discipline and effective work were soon distinguishable: and Stirling, we thought at the time, was fortunate in being the station of a military depôt. The fire burned during the whole night, and was not extinguished till a late hour the next morning. It was said to have been unexampled in the district for many years; the last occurrence of such a serious character being the fire in the Douglas Room, when one of the most interesting antiquities in Scotland was reduced to ashes.

* See p. 909, *ante*.

We made some notes on the condition of the villages which surround Stirling. Raploch, a long straggling row of cottages, conspicuous from the castle, is, we believe, the Irish colony of the place, and of course the most unsalubrious and unhealthy. On walking through it we could easily detect symptoms of every conceivable form of nuisance, and every stage of overcrowding. Occasionally, we were told, during the period of any sudden Celtic irruption, thirty or forty persons might be found huddled together in some of the cottages. One thing occurs to us worthy the attention of the authorities, and that is the long slimy, stagnant ditch, which is, in fact, a long open cesspool, that lies in front of the cottages. Although concealed from observation on the highway by a luxuriant hedge-row, its deadly effect will, nevertheless, make itself felt. It might be easy to direct a stream of water through it, if nothing else could be done.

St. Ninian's is an excessively dirty though rather extensive village, having a church which presents the extraordinary spectacle of a clock tower and belfry standing apart from the body of the church. The explanation, we believe, was this:—When the Highlanders were retreating to the north, in 1716, the existing church, which was then connected with its tower, was used as a powder magazine. By design or accident, it is not said which, the magazine exploded, and the church was blown to atoms. Strange enough the steeple received no damage, and was allowed to stand on its old site, while the new church was built a little distance, but unconnected with it. The practice of the people in this village is to empty their refuse on the roadway. Where it goes to we cannot tell, unless it is absorbed by the soil, which is of course a very dangerous condition of things, particularly if there be draw-wells in the place.

Milltown is celebrated as a colony of nail-makers. If we remember rightly, Adam Smith tells us a story of Milltown, that in his day the inhabitants of this village carried nails to the ale-house in place of the current specie of the realm. Close by, the house is still shown in which James III. was assassinated, not the only victim of the royal line of Stuart to the turbulence of the Scottish nobility. Milltown is rather better in point of sanitary observances than some of the other villages. There is something purifying about a forge always. But in a little hamlet between Milltown and St. Ninian's we observed a most extraordinary domestic arrangement. It was a small cottage divided by a single partition, through which was a doorway: in the one compartment was the nailmaker's forge, *and a cow*; in the other single apartment was the nailmaker and his wife and family!

Bannockburn is a large manufacturing village. A little stream called the Bannock supplies it at once with the name and the motive power for a number of mills engaged in the woollen tartan trade. Some of the older cottages are dark dismal hovels, but some of the newer erections call for approval. The "Pollution of Rivers Bill" might be appropriately put in force here, after the Lord Advocate succeeds in getting it passed.

Cambus Barron, to our thinking, is the cleanliest village near Stirling. Most of the cottages are well though roughly built, and some are of a very superior order. A few have little gardens in front adorned with autumn lilacs and fuschias; and a small running stream passing through the village keeps it well drained and comparatively pure.

Cambus Kenneth is the very reverse of this in every respect. "The Field of Kenneth," as its name implies, is situate on the opposite bank of the Forth from Stirling, whence it is reached by a ferryboat. The chief object of interest here is the venerable grey tower of the ancient Augustine monastery, despoiled and torn down, as we have mentioned, at the Reformation. Even in its ruins it is still noble-looking. The crowfoot gables, so conspicuous in Scotch ecclesiastical architecture, and the massive strength of the walls and buttresses, are deserving of study. And so is the sanitary condition of the village. It is enough to make one melancholy. We are certain the vassals of the monastery in the fifteenth century could hardly have possessed more wretched hovels than the present inhabitants. These are chiefly hand-loom weavers, engaged, as we could see, in working the black and magenta striped stockings which are fashionable among the stout-limbed lasses of the Forth. We did not inquire what wages they made, for we knew instinctively that the answer would have been, *barely* as much as will keep soul and body together. Some of the old thatched cottages are not more than 9 ft. square by 6½ ft in height, lighted with two miserable bull's-eye panes of glass; others are half ruined; others we really could not distinguish from the pig-sties to which they were connected, so villainously diminutive, ill-lighted, and dirty did they seem. To every cottage, however, we were glad to see attached a kitchen-garden in more or less flourishing condition.

We had something to say about the Bridge of Allan, a fashionable Scotch watering-place about three miles from Stirling; but we must reserve our remarks as to its mineral well and other peculiarities. We will only note further that the whole neighbourhood both of Stirling and the Bridge of Allan is so infested with beggars that we are led to infer some grave defect either in the character or the administration of the Poor-laws in Scotland. One would suppose that the whole juvenile population and all the old women of the place were trained to beg. We need not enlarge upon the disagreeable effect of this on visitors and strangers; the demoralizing effect on the people themselves is of far higher consequence, and should not be overlooked. A juvenile beggar systematically trained to whining and imposture is not far removed from a juvenile thief. We point out these things not by any means in a spirit of hostile and ungenial criticism, but simply with a full knowledge and long experience of their evil effects. Stirling is pre-eminently a neighbourhood for people who seek retirement; and the Bridge of Allan is celebrated as a suitable residence for invalids. A vast number of tourists and sportsmen also pass through Stirling on their way to the north. If the local authorities wish to increase these sources of revenue, they must not disfigure their natural beauties nor destroy their natural amenities; and, above all things, they must give convenience and encourage habits of personal cleanliness in the poorer orders of the people.

THE CHARING-CROSS HOTEL.*

In our previous notice of this building, we gave general information of the accommodation provided, and of the arrangement of the plan, and intimated that we should further speak of the decorative features and of the construction.

The Strand front, which includes the railway booking-offices, the exit-way from the station, and the main entrance to the hotel, consists, as we said, of a centre of twelve bays of openings, and of the two pavilions. The centre is in five stories above ground, besides two stories in the roof. In the pavilions, which are at the ends, however, we should correctly speak of the stories as in number six, besides three as appearing to belong to the roof; for, one of the stories in each pavilion, the sixth, has the character of an ordinary story externally only: the ridge-rafters of the high-pitch roof start in fact from the level of the general cornice-line of the building; and the rooms are retrenched correspondingly inside; though the story appears externally with a cornice and balustrade, and with the principal dormers above it. This explanation may prevent any seeming discrepancy between our former description and the character of the building.

The recess in the Villiers-street front, in the centre, between towers which are there attached to the pavilions, is of twelve bays; and the stories correspond with those of the Strand front, excepting that there is an additional range of openings to the mezzanine which extends over a portion of the ground story, and excepting that one, or in part of the length two, of the three ranges of basement windows appear above the sloping line of ground; whilst the kitchen being of the height of two basement stories, its windows are the same, and owing to the declivity are wholly above ground.

The third and fifth stories, in the centre of each front, counting from the ground-line on the Strand side, and the sixth story in the pavilions, have the openings coupled; or, they are two in the place of one window of the story below. In the top range, the openings are arch-headed, with a central pier; whilst the exterior forms a screen to the actual windows, which the thickness of the wall allows to be set inwards sufficiently for considerable addition to the effect. The third story being in fact a mezzanine, the windows are of moderate height; and they are square-headed and not recessed. Those in the north-eastern pavilion may give light to the upper part of the Reading-room; and those in the southern pavilion in Villiers-street will light the corresponding part of the Coffee-room, as we have already described. In the greater number of the details, the two fronts correspond with one another; but there is considerable difference in the elevations from the much closer setting of the windows in the centre of the Villiers-street front, the addition of engaged columns to the narrow piers in the second and fourth stories, and the substitution of unbroken lines of cornices and balconies, for lines broken by the projection of the windows as in the Strand front; from the greater height of the building, at the south pavilion especially; from the belvidere-storied and pyramidally-roofed towers in place of the mere piers with tabernacles and spirelets, to two of the angles of the pavilions; from the first-floor balcony boldly projecting on stone cantilevers; and from the substitution of a basement characterized by a peculiar rustication in the brickwork, for that in which the most prominent features are the two porches and the pent-roof to the footway to the station entrances.

In the Strand front, the four principal stories of the centre have pilasters, and cornices or regular entablatures, to all the windows, and balconets, which last do not advance beyond the face of the pilasters, excepting in the case of the first-floor mezzanine, where the cornice of the first-floor windows is carried by trusses. A novel form of balustrade having a semicircular-topped centre, and a cross in a circle between elaborate ornament, is here introduced. This feature cuts off part of the height of the mezzanine-windows as seen from the exterior. The balustrade referred to, like the greater portion of the ornament throughout the elevations, is in terra-cotta of Mr. Blanchard's manufacture. In both elevations there is an appearance of considerable enrichment in balconets and other features which are executed in this same material. In the second and fourth stories, the capitals to columns or pilasters, are all of terra-cotta, varied from the Corinthian by the introduction of a cross on the bell. A cross, and the letter C doubled as a monogram, appear in many parts of the building, internally as well as externally. The frieze to each window of the first-floor exhibits the monogram and other ornament. The cornice to the mezzanine window is carried by small trusses or consoles, somewhat larger trusses forming the capitals to the pilasters and the support to the quasi-balcony of the fourth story, as the pilasters and entablature of the windows of that story form support to the similar feature of the fifth story. The pattern of balustrading is varied in each of the stories. To the first floor, a peculiar form of ornament is alternated with balusters of a common pattern: to the fourth story, there are curves of contrary flexure, alternated with balusters which take the form of square *antæ*: in the fifth story, the forms are intersecting circles; and, for the crowning balustrade, the square-anta pattern, or what much resembles it, is used alone, and has the best result. The main cornice of the building, with cantilevers of the Vignola character in terra-cotta, is sufficiently effective, as also are the cornices to the several stories, in their combination with the broad angle-piers of the pavilions. All the mouldings however are of Portland cement. The angle-piers have the same character of rustication in brickwork, to be hereafter noticed, as the basement of the Villiers-street front, and for the whole height of the five ordinary stories. In the sixth story of the pavilions, the angle-piers have small niches; and they are crowned, in the Strand front, by the square tabernacles, or turrets, which are themselves terminated by the domical covering and spirelets, and by finials of gilt copper of highly decorative character. Similar finials, more or less conspicuous, or others in terra-cotta with gilt balls, terminate the high pyramidal roofs to the two turrets of the Villiers-street front, the several dormers, and the main balustrade.

The window-openings of the pavilions, not including the towers on the Villiers-street side,—which are separately treated, being carried up to a balcony where the belvidere-story commences,—are grouped three together, on plan, as a centre; and the greater thickness of the wall allows of detached columns, and of much effect from recession of the window-frames. Somewhat greater enrichment also is given to the balconies of the fifth-story windows in the pavilion, than to those of the centre of each front.

* See p. 876, *ante*.

The dormers to the lowest story in the roof, both in the pavilions and in the centre of each front, have arch-headed openings, pilasters, and pediments. The dormers of the upper range in the centre, are also arch-headed in the openings, but are less important both in size and decoration; and the opening is terminated by a label-moulding, finished by volutes or spirals, of a pattern resembling that used for the capping of the brick-piers of the adjacent bridge. The roll and volutes do not form an elegant feature of detail, on the large scale or the small. The upper range of dormers, or lunettes, stands upon a line of mouldings combined with a fascia of coloured tiles, each tile exhibiting the figure of the cross. The dormer-windows of the two upper ranges of the pavilions are smaller in size; but though they are not very conspicuous, they light some good rooms.

The ridges of the hips and top of the pavilion-roof are ornamented with stamped and cut zinc; and a cresting of the same material and character of ornament surmounts the roof of the centre. All this zinc-work had to be executed in France; and that circumstance caused the architect no slight trouble.

The chimneys, which are amongst the most important of the features of the building decoratively, have been managed with much skill. The flues in the building must be over two hundred and sixty; indeed, there is scarcely a room without a fire-place; and to get these flues up to chimneys which would intersect the ridge, and at the same time to leave headway in the top corridor, was not an easy matter. The chimneys above the roof are enriched with cornice and base-mouldings, and panelling; but much of their effect is derived from the plan of the shaft, or the relief afforded by slight breaks in the sides, and from the coupled columns in red terra-cotta which are affixed to the shaft, at each end.

Two flag-staves surmount each of the three pavilions. Flowers in vases will probably be placed on the balustrade of the Villiers-street front, and upon the porches; and with the glitter of lights at night-time around the fore-court, this one of the hotels "calling themselves Limited, but called Unlimited by Major Jackman, rising up everywhere, and rising up into flagstaffs where they can't go any higher," would seem likely to be attractive enough to satisfy even Mrs. Lirriper. The effect of the porches, one to the hotel, and one forming the cab-exit from the station, is much better than when we first noticed them seemed at all likely. The segmental arch springing from columns is still an eyesore; but the ornament that has been introduced in the tympanum of the pediment and elsewhere, is so good, that attention is in part drawn away from what is defective. The columns have polished red granite shafts, dark-coloured granite plinths, and stone capitals richly carved. The stone piers to the railing of the fore court,—some of these bearing lamps, and others globular-formed terminals in stone, with gilt finials,—and the two lodges next the Strand, are certainly effective. The lodges are particularly clever; but there is an exception to this in the small triplet or Venetian window. The arch of the centre-opening is made to appear rather less than a semicircle, by the mouldings to it, which form a label; and the little red granite shafts are not sufficiently conspicuous (though this is most remarkable at night) to prevent the appearance of an unsightly form of single opening instead of that of the three openings actual and intended to appear. The effect of the Cross in the centre of the fore-court has yet to be seen. Of the questionable propriety of there erecting such an object, of the confusion likely to arise by giving the name Charing-Cross to the locality, whilst there is a Charing-Cross at some distance, and of the mistaken course in art which such a restoration must exhibit, however well done, we have spoken more than once.

The capitals generally, and, as we have said, the balusters, and the trusses, and nearly all the ornament, are in terra-cotta. These features, as work, are at least equal to anything that has been done; and we do not know of any modern instance of such an extensive application of the material. But if equal to what has been done, the work is certainly not all that is required to reconcile us to the absence of stone-work; and in the design of this ornamentation, there is more of the manufacturer, bent on showing off his manufacture, than there is of the architect. The divergence from rectiliniarity, and from horizontality or perpendicularity, in the separate pieces, is slight; but what there is becomes important in the general effect, repeated as it is. As to the matter of design, there is a merit in novelty, and there ought to be difficulty in finding words to exactly describe features of a new building; but there cannot be all the merit that there should be of the art-work, unless it will without much loss, stand comparison with what has been done before. To apply this to the case before us, we would say that simple balusters of an ordinary pattern, would in our opinion have been more effective than the somewhat too enriched and rather uncouth forms that have been alternated with ordinary balusters in the Charing-Cross Hotel. If, as is possible, the new forms were introduced in order that defects of the material might be less apparent, then the circumstance only corroborates the view that the material has disadvantages, or that the sort of design suited to it has yet to be discovered. In some of the balconets to windows, ordinary forms of balustrading are altogether eschewed; and here, dissonance between the ornamentation of the building and the architect's main forms and outlines is great. The most effective part of the building, if we except the chimneys, wherein terra-cotta is used, is the cornice, as already remarked. All the mouldings have been run in cement. We should have preferred stone; but had the terra-cotta been used for any of the right lines of the design, the effect would scarcely have been what at present it is.

The Portland cement, used for the pilasters to the windows, and for the strings and cornices, however, and the general wall-facing of Suffolk brick, will shortly become sombre in appearance; and the cement will the soonest, unless indeed it be coloured.

The general outline of the pavilions, the arrangement of their openings, and the treatment of their angle-piers are very effective. The piers throughout the height from ground-line to cornice, and the basement in Villiers-street, we have said are ornamented with a peculiar kind of rustication. This we take to be the invention of Mr. Barry. Every sixth course of the brickwork is set with bricks specially moulded, so as to make a line of dog-tooth or nail-head ornament; the next course of bricks above, and that below, being slightly chamfered. A similar kind of rustication is introduced on a smaller scale in some of the stone piers of the forecourt, and in the lodges.

The south pavilion, as approached from the river, is one of the most effective features in the building. It differs from the other pavilions chiefly by the height, the introduction of a projecting balcony to the coffee-room window on that side, the addition of two great shafts which enclose smoke and ventilating flues from the kitchen and coffee-room, and the prominence given to the dormer-lights, which are grouped together under a pediment. There is a very good elevation towards Brewer's-lane, or westward; but it is so closely shut in as to be visible only from the opposite side of the lane, 10 ft. or 15 ft. in width.

Looking to the interior of the building, we find much that calls for notice in the decoration, and in different contrivances besides what were noted in our last article.

The 48 ft. square mentioned as the size of the coffee-room, is in fact inclusive of four wide recesses: two angles in the plan are taken up by the shafts, 8 ft. square, and two by corresponding spaces. The shafts, features southwards in the elevation of the pavilion terminating the building, are thus formed. In the centre of the 8 ft. space, three flues are carried up, in iron, the middle one in each case being an air-flue, and the two others smoke-flues, the spaces between the ironwork and the brickwork being for ventilation also. The angles of the four projections into the coffee-room are splayed off; and the fire-places are arranged on two of the splays; whilst sideboards will project from the two others. At each of these four corners of the central space in the ceiling, will be a sun-burner light; and possibly there may be a chandelier in the centre to give a moderate amount of light to the ceiling. The ceiling is arranged with a large circular low domical-formed coffer in the centre, to have various enrichments in papier-mâché or Jackson's composition within it. Around this, is ornament in plaster, some of it too minute. A monogram referring to the name of the hotel, is introduced in medallions. Around the room will be columns with shafts of red marble, and pilasters with enrichment in scagliola. To the windows of the lower level, which are arch-headed, will be columns, with shafts of dark-coloured marble, carrying the archivolts, and with Corinthian capitals. The space above the principal order, corresponding with the mezzanine, is arranged in the recesses as a small arcade, with shafts of dark-coloured marble, the openings being filled with glass of ornamental pattern. At the corresponding level, the sides of the angle projections are filled in with panels for ventilation, whilst the splays will receive probably two clocks, and two indicators of the state of the weather. In the construction for the support of the rooms and corridor-walls in the stories above this space of 48 ft. square, and to avoid such depth of girders as would have encroached greatly upon the height of the room, part of the support is obtained by girders to the floor of the story which is second above the mezzanine; the flooring and partitions of the story first above being partly suspended from the upper girders. The leading forms of the ceiling of the coffee-room have been cleverly arranged in combination with this construction, little space being lost in bracketing. The coffee-room, we fear, will be found much too small.

In the room below the coffee-room, the railway refreshment-room, the large central space of the coffee-room is carried by square piers, which become effective features of decoration. Oblong openings, above the principal windows, are glazed ornamentally, in casements which are swivel-hung for ventilation. The coloured decoration of this room, has been given, not by the architect, into the hands of Messrs. Jackson & Graham, with 100*l.* as the limit of expense; and Mr. Owen Jones mainly has decided what has been done. The greater portion of the height of the walls and piers has received a very dark tone of colour,—the plinths, indeed, being black; whilst the upper portion of the walls and the ceiling are decorated with paperhangings of Mr. Jones's designs. The cutting line of division between the dark and the light tones of colour, seems to us not in harmony with the room as planned and designed at first; and the paperhanging decoration generally is inferior to the ornamentation on the piers, which, besides good design, has all the precision and delicacy of workmanship which Mr. Owen Jones is so well able to secure. The piers and walls above the plinths are an Indian red, the ornament upon those parts being ochre-colour, as are also the mouldings of the bases. The portion of the ceiling corresponding with the centre or main area of the room, is divided into nine square compartments, which are diapered, as are also the coves to them; and the soffits of the beams are ornamented with frets, in which the more prominent colours are crimson and blue. From this refreshment-room there is a narrow stair leading to wine-vaults which are in the railway arches; and at the north-east of the same room is the kitchen for the railway department, the hotel-kitchen being underneath.

The Reading-room, on the same floor as the Coffee-room, but in the north-eastern pavilion, will have a rich ceiling with a bold cove, and glazed in part, and a centre or plafond filled with octagonal coffers. The ceilings of many of the rooms have ornamentation of superior character.

The grand staircase, with the space of the corridor in immediate connexion with it, measures on plan 31 ft. 10 in. by 28 ft. 3 in. The steps, which are of stone, are carried next the well-hole by iron girders. There will be marble balusters, and a hand-rail of ornamental wood. There will be a sun-burner at the top. Looking into the staircase from the serving-room on each story, will be a circular window. The staircase in the Strand building, which starts only from the first-floor, is carried in the usual manner of a geometrical staircase, or without the girders; but above the first-floor, the position of the corridor being shifted to what there becomes the centre line, and the stairs being shifted from the north to the south, the landing between, to form the portion of corridor, is carried by girders. Messrs. Cochrane produced most of the iron-work in the building, but the railing of the fore-court is the work of Mr. H. Grissell.

Considerable effect is obtained in the corridors of the ground and first floors, merely by skilful disposition of a few columns, arches, domes, and pendentives. In the plastering, the angles are run in Keene's cement. Wooden angle-staves, as well as strips of iron for arrises, may now be considered old-fashioned. The best rooms are stuccoed, and the corridors are plastered in Parian cement. This latter material, it may be

right to say, does not always bear painting upon, as supposed, quickly. Keene's cement is considered by many, the harder material.

The coal-bunker which is to be on each floor, and to contain 2 tons, will probably be arranged somewhat on the principle of a common dust-bin, but with inclined bottom, so that the coals will always slide down to a small opening, at which, in the luggage lobby, scuttles can be filled. The bunker will be filled from the luggage lift.

The frames for the glass of the heads of semicircular-headed windows, in place of being made to open by the unsightly lines and pullies, will be worked each by a cord attached to a crank fixed, within the wall, to one end of a rod which will form part of the bottom-rail. It would however be desirable that the opening should be more than the intended 8 in. The ordinary top-sash will be fixed; and the bottom one will be made to open.

There is much contrivance in details connected with the roofs. The architraves of the dormer-windows are carried on pieces of landing, the gutter passing underneath. The down-pipes are all inside the building; and to lessen chance of damage to the rooms, overflows through the cornice are carefully provided from each cesspool-head; whilst the top of the pipe is protected by a cover of galvanized iron-work, which is fixed. The common lead-rose, which is usually not fixed, is always stolen; besides the holes do not allow sufficient passage for the water. The overflows have already prevented serious leakage into the building. To keep the attics cool, there is besides the ordinary ceiling to rafters, a thickness of lath and plaster in the middle of the depth of rafters, so as to get two air-spaces. No felt is used. These spaces are in communication with the hollows of the red terra-cotta columns of the chimney-shafts.

The closets, placed two together, are lighted by one gas-burner, which is in a glass globe in the partition. From this globe there is a pipe which reaches to the exterior, to convey the products of combustion; whilst the air is drawn through small openings at the base of the globe, from each closet: thus, if there be no down-draught, perfect ventilation will be secured. Urinals, throughout the interior of the building, have been advisedly eschewed.

We may also mention that in each of the corridors there is a 12-in. space on each side, for pipes; so arranged that the stones can be easily taken up and the pipes got at, without removing a large surface of flooring. There are many other contrivances, of which the advantage will be found.

The building is likely to cost about 130,000*l.*, or including the furniture, 150,000*l.* Mr. E. M. Barry, A.R.A., we have already mentioned as the architect. Messrs. Lucas are the builders; and Mr. McGill is the architect's clerk of works.

METROPOLITAN CABS AND RAILWAYS.

The London cabmen complain bitterly of the marked decline of their custom, both by day and by night; and they seem puzzled sufficiently to account for this. It seems easy enough to do so, however; but, in the first place, it is worth while to glance at the way in which the cab-business of the metropolis is generally managed.

A large number of cabs belong to, or are worked by, the railway companies, and many others belong to proprietors who have large sums invested in cabs and horses. These public carriages are numbered and inspected by the police. The horses are required to be of fair quality. As drivers, some men are needed for night and others for day duty. The day cabman commonly begins work about nine o'clock in the morning, and returns to the stables about twelve o'clock at night. The night cabman commences about six o'clock in the evening, and continues at work until about nine o'clock on the following morning. Thus the London streets are never without cab accommodation. Each horse and cab are lent to a cabman, who is expected to pay to the proprietor, at the end of his day or night work, a some of 7s. 6d. or 8s.; and this must be paid whether the driver has earned as much or not. Deficiency in the estimated sum he must make up, or, on failing to do so, he is liable to be sent for a term of confinement to a felon's prison.

Although the cost for horse and cab for the day or night is, in many instances, from 7s. 6d. to 8s., we have heard that, in some cases, the chargo for a night cab is 7s. 9d. in the summer, and part of the spring and autumn. At this time of the year, towards Christmas, the charge for a night cab is only 5s. 9d.; but at Christmas the price per night comes to 7s. 9d. again.

The railway cabs are charged to the men at a higher rate. At the Great Northern, for instance, the sum which the men have to make up for the loan of a horse and cab from nine o'clock in the morning to about twelve o'clock at night, is,—For horse and cab, 11s. 6d.; to be paid at the yard, 3d.; and for rail, 6d.; in all, 12s. 3d.

At a recent meeting of the cab-drivers, it was stated that the number of men employed in connexion with cabs is over 40,000. From this it will be seen what a large and important matter the cab business is.

The history of many a cabman would make each a curious book. Most of them have been unsuccessful in other pursuits of life, and have taken to the driving of cabs as a last resource. They must, however, be men of fair character.

At all times cab ranks are under police supervision; for the watermen, as they are called, are nearly all superannuated policemen who are under the control of the Scotland-yard Commissioners. For the most part, the night cabs, &c., are in worse condition than those used during the day. Some of them, notwithstanding the regulations, are dilapidated carriages, with very sorry horses; and some of the drivers would barely pass muster in the day-time.

The cabmen complain of the harshness of their treatment by the Commissioners; of overcharges for straps and other matters, respecting which we have had no opportunity of making inquiry; as well as of the difficulty which there often is in paying their masters; even without taking into account what is necessary for the support of themselves and families. There can be no doubt that the cabmen lead a hard life; and we know of no more seemingly miserable kind of employment than that of the night cabmen, who, in fair weather and foul, in the depth of winter, as well as at other seasons, are exposed for so many hours in the open air. It must also be admitted that these men are sharply looked after, and that some of the regulations are severe. This, however, has in a great measure been caused by the former extortion, incivility, and other misconduct of many of the men themselves. But there has of late been a marked improvement in the manners of cab-drivers; and we are glad to hear that there have been established among them provident institutions; and that there is a large attendance at Sunday and other lectures, &c., which are given for the advantage of this class.

As we have already said, the men at present complain of especially hard times. One man, for example, says he has driven for fifteen hours during each of three days; and, instead of profit, he has had to make up more than 5s. of deficiency at the yard. Another man who worked during three nights states that on one night he was deficient in the amount of his master's money; on another he had 9d. over for himself; and the next night he barely got enough for the horse and cab hire. Similar accounts are given by others. One, we recollect, complained that he had been on the stand from six p.m. till one a.m., when the writer of this engaged him from a printing-office home, and that during all that time he had not earned a single penny, and had not tasted anything; and that every shop being shut, by the new regulations, he must fast till four o'clock, although he had then the means of obtaining refreshment.

As regards the night cabmen, the badness of trade has evidently been caused by the closing of the Haymarket and other night houses throughout London, many of which were places of infamous resort; and although the measure is bad for cabmen, it is in other ways of excellent effect. But besides this, there are other agencies which help to lessen the demand for cabs: one of the most important is the opening of the metropolitan railways. Amongst the thousands who daily travel by the Underground Railway to the City and the other stations, a large number would have used cabs; but few think of doing this when they can travel so well and so quickly, either a long or a short distance, for so small a sum as twopence or threepence; and when the system of the metropolitan railways is completed, it is probable that the demand for cabs will be still further lessened. There will soon be railway communication for passengers and luggage between the various railway termini; and a glance at any of those places, on the arrival of trains, will show how immense is the present cab-traffic, and how materially that traffic will be reduced when the new lines are finished and in working order. The day may come when poor cabby will be as rare an animal as the mail-coachman.

At the time of the International Exhibition cabmen made a great deal of money, and many new carriages were sent upon the already crowded ranks: when the extra demand ceased but few of these were withdrawn, and this made it generally worse for the men. Of late, too, the omnibuses have begun to work several new suburban and other lines, a circumstance which materially affects the demand for cabs.

PRIZES OF THE ARCHITECTURAL MUSEUM.

The prizes to art-workmen have been awarded. The following is the report of the Council:—

"It is with no pleasant feelings that the Council has to announce that it declines to give any prizes for wood-carving this year. Encouraged by the success which attended the competition of last year, it offered for 1864 prizes larger in value than it had ever done before, viz., a first prize of 20*l.* and a second one of 10*l.*, with extra prizes of 1*l.* 1*s.*, or upwards, according to the merit of the specimens, and it proposed for the subject a narrative which it believed was familiar, above all others, to every one from earliest infancy, viz., the parable of the Good Samaritan. It made sure that so well-known a subject and such ample remuneration would have produced tenders of more than average merit, and probably a larger number of them. When the time for sending in the subjects had arrived the Council was astonished to find that only five competitors had entered the lists. When their works came to be examined, the Council, to its regret, discovered that the five panels were, while slightly different in comparative merit, alike unsatisfactory in conception and clumsy in execution. It was the unanimous opinion of all who assembled at the adjudication that none deserved a prize, even of a reduced value; so the year which, it was hoped, might have been marked as an epoch of progress will be noted in the records of the Architectural Museum as a blank, as far as the prizes for carving are concerned.

The Museum has a different record to make of the new prizes for silver work. The Council of the Architectural Museum offered a first prize of 10*l.* for the best, and Mr. H. Heather Bigg, of Wimpole-street, a second prize of 5 guineas for the next best reproduction in silver, on a reduced scale, of a cast in the Architectural Museum Collection representing a group of leaves. The special object of this prize was to encourage hand-tooling or chasing. The length of the leaves in the works sent in competition was not to be more than 3-8ths of an inch. The group of leaves was to be either chiselled from the solid, or cast and carefully chased, or the leaves made in detail and brought together by soldering.

Six specimens were sent in, of which two were considered to be disqualified from their non-fulfilment of the exact conditions. The first prize was given to Mr Henry Whitehouse, jun., employed by Mr. Whitehouse, of 9, Chadwell-street, St. John-street-road; the second to Mr. Septimus Beresford, employed by Mr Richards, of 29, Myddelton-street, St. John-street-road; and an extra prize of 3 guineas was voted by the Museum to Mr. George J. Langley, of 25, Wynyatt-street, Clerkenwell. Moreover, the work of Mr Walter Harrisson, apprentice to Messrs. Garrard, which was disqualified from the competition from its non-fulfilment of the conditions, was considered to possess such merit that a gratuity of 1 guinea and a bound copy of Labarte's 'Handbook of Arts of the Middle Ages' were voted to Mr. Harrisson.

The colour prizes usually given by the Ecclesiological Society and Mr. Beresford Hope, through the Architectural Museum, were this year transmuted by the donors into a prize of 10*l.*, for a rosette, executed in transparent enamels on silver. The colours to be of not less than nine separate tints, and of the same class and character as those in the head of a crozier (from the Soltykoff collection), and two triptychs (silver gilt, and with plaques of translucent enamel, date *circa* 1350 to 1400), exhibited in the Precious Metal, Enamel, and Jewellery Court of the South Kensington Museum. The central compartment of the rosette to contain two tints without an intervening thread of metal, which need not be sunk to a depth of more than 1-30th of an inch.

Another prize of 10*l.*, given by Mr. Ruskin, was offered for a rosette, of similar size and design to the above, executed in opaque enamels on a ground of copper. The colours to be of not less than nine separate tints, and of the same class and character as those of the Soltykoff Chasse, in the South Kensington Museum, or of any fine specimen of Chinese executed enamel. The central compartment of the rosette to contain two tints, without an intervening thread of metal. The copper to be hollowed to the depth of not less than 1-16th of an inch, and the metal surfaces to be fire-gilt.

These two prizes were to be adjudicated by the committee of the Ecclesiological Society, together with Mr. Ruskin, Mr. J. C. Robinson, and Mr. Burges. For the first prize two competitors strove, and, acting on the discretionary power contained in the instructions, the judges divided the prize into one of 7*l.*, to Mr. H. de Koningh, of 79, Dean-street, Soho, and one of 3*l.* to Mr. Frederick Lowe, of 13, Wilderness-row, London. Mr. de Koningh's work was remarkable for the success with which he had enamelled good ruby on silver, a feat which Cellini pronounced impossible, though comparatively easy on gold.

For Mr. Ruskin's prize there were three competitors, and the prize was assigned to Mr. Alfred Gray, in the employ of Messrs. Elkington, of Birmingham. Mr. de Koningh, however, competed with so much spirit, not only with the prescribed rosette, but with a volunteered imitation of Chinese *cloisonné*, that although the latter had no equitable claim to a prize, the judges recommended the Architectural Museum to recognise its merit by a gift of 'Labarte's Handbook,' which was voted accordingly. (Signed) Joseph Clarke, Hon. Sec.

December 14, 1864."

A course of lectures is being arranged to commence early in March, 1865.

A NOTE ON COLOUR AND EFFECT IN LINE ENGRAVING.

WHEN recently examining with care a number of fine engravings of the English school, by Strange, Woollett, Heath, Doo, Goodall, Smith, Cousens, and others, from copper plates, we were more than ever struck by the great pains which had been taken, and the skill shown by the arrangement of lines printed in black and white, to imitate the colours of the pictures which are translated. By means of rich thick and flowing lines, the reds and scarlets are shown with admirable effect: with straighter and closer lines, the blue and other cool tints are imitated; and by means of interlining, cross-hatching, dotting, and by the graduation and power of lines, an excellent idea of the other varied hues is produced. It is in this respect, and also in the ability for art required in the difficult process of reducing a coloured work of art to the proper light and shade in one simple tint, and also the large amount of manipulative skill which is needed to produce a high class engraving on a metal plate, that we find reason for thinking that not sufficient credit is given to the line engravers for artistic ability.

In the practice of engraving on wood the drawing is placed by the draughtsman carefully on the block. There are all the details marked for the engraver, and the light and the direction of the lines are for the most part clearly indicated. It is not so in picture engraving on metals. In this kind of work, he has make his outline by reduction from large paintings or drawings, he has also to attend to the somewhat difficult processes of laying his etching-ground, and the different preparations required for "rebiting," as a means of darkening the tints.

The engraver on steel or copper has a bare plate to begin with, on which he has, with his own hands, aided by long practice and a knowledge of his art, to lay the foundation of the intended effect. Not having the use of actual colour, he must in his first etching provide for his aërial and distant tints by attending to the perspective of lines. He has also to study the nature of the lines which, by means of their boldness in the foreground will drive the distance back, or the parts where great depth and darkness of tint are required. There are also the free and graceful delineation of the foliage, the texture of the various objects, and other important matters to be attended to in the first etching. This done, and the acid applied, there is need of the utmost care. From time to time the acid must be removed from the wax wall which has been fixed round the plate to keep the corroding liquid at a proper depth, and the delicate parts stopped out with varnish, which will prevent them from becoming dark blots. On copper, by means of the repeated application of the acid, the etching is got into a workable shape; but even then, to the uninitiated, an impression from the plate would have a flat and uniformly grey appearance. Now comes the second trial of the artistic ability of the engraver. By the dabber and etching-ground he lays over the plate the material which protects the surface, but allows in the parts where it is needful the acid to thicken, deepen, and darken the lines: having sufficient strength of tint to work upon, he tones portions with the graver, steadies and flattens the lighter parts with the burnisher, and gradually, by means of re-etchings, re-bitings, and delicate working with the dry-point, the work slowly but surely in skilful hands assumes the aspect of the picture and the solidity and also the atmospheric appearance of nature.

The etching may be compared with the dead-colouring of pictures; and many engravers have had their groundwork prepared for them by persons who have never attempted to finish a plate, and who, although they had great merits, are but little, generally, known to fame. In this way Milton, whose etchings of landscapes are exquisite, worked with Woollett; but it is to the later working of the last-named great engraver that we are indebted for the marvellous variety of the deep, transparent tints, the rich texture of the thatch of picturesque cottages, the crops of varied herbage and mosses, the varieties of wood, stone, and other work, the lights and depths of foliage, the peculiarities of the bark and branches, the glowing colours of sunrise or sunset, and the cool quiet repose of other times. In many ways the vigorous landscape engravings of Woollett remind us of the pictures by Sir Joshua Reynolds, for there is to be seen in them the same power of hand and boldness of execution. In the works of the engraver, the charm of effect is in chief manner caused by the general strength and fatness of the lines,* which in their way resemble the deep, rich, and transparent colours of some of Reynolds's best productions.

In some of the finest works of the English school of engraving, it is to be noted that the etching and every portion have been completed by the same hand: and many are of opinion that it would have been better if this plan had been more generally carried out. It may, however, be asserted that certain parts of the etching, and also the middle working of plates, may be very well executed by able assistants under the eye of the master, and thus enable him to elaborate, refine, and finish a greater number of works. Many an artist can make admirable sketches who will never be able to complete a work of merit: it requires faculties of a peculiar kind to do this. In the same way, there are persons who can well do parts of engravings who would not be able to carry them beyond a certain stage. And it may be remarked that in painting, celebrated artists have extensively availed themselves of help, especially portrait-painters, in the working of the costume, drapery, and back-grounds.

On comparing some of the proofs from copper-plates with those from steel, there is a marked difference in the general colour. On copper there is a more warm and golden hue; on steel, tints have a cooler and more silvery effect. In some cases there has been more than the usual force given to large steel engravings; as may be seen, for instance, in some of the last plates by the late Mr. Willmore.

* In some of these plates the depth and strength of the lines are remarkable, and in some of the impressions the ink stands up from the surface of the paper, and is clearly perceptible to the touch; and this is one of the advantages which line engravings will always have over wood engravings, which, being printed from the surface, can only produce on the paper an equal flat quantity of printing ink.

ARCHITECTURE AND PAINTING.

THERE is is one circumstance indirectly connected with David Roberts's position among his contemporaries which has not been adverted to in any of the recent notices of him;—namely, that he had all to himself that special walk of art in which he earned fame. Among our oil-painters, he was the only one who employed his pencil on architectural subjects; consequently his death has occasioned a gap that, to all appearance, is not likely to be soon filled up; for, strange to say, Roberts's success has not stirred any one up to the following his example.

Some few years ago I earnestly advised a clever young artist who showed ability far exceeding that of a mere skilful draughtsman, to take up oil-painting; and, instead of architectural drawings, produce what the public would accept as *pictures*. Of course, I told him, he would have to qualify himself duly and diligently for the change from water to oil, since he could not expect to become all at once quite expert in the management of a vehicle of colour quite new to him. Eagerly did he catch at the idea, exclaiming, "By Jove, the very thing! I'll do it; you shall see if I do not," and a great deal more of that sort; but I have since neither seen nor heard anything of him, therefore suppose that he has slipped down through one of those fatal trap-doors on the highway of life which the unwary tread upon, and suddenly find their exit and finis.

Not a little surprising, if not mortifying also, it surely is, that a class of painting which presents us, so to say, with two different arts at the same time,—viz., art architectural and the skilful pictorial representation of it,—should be so little practised among us. Hardly can it be attributed to the want of sufficient encouragement or inducement, since many of Roberts's works obtained prices that might be deemed almost fabulous for subjects of the same kind if they smacked more of the drawing-board than of the easel. True it is they possess little interest for untutored eyes: to the majority of exhibition visitors they are downright *caviare*; they greatly preferring the hackneyed, common-place, namby-pamby subjects, of which we get by far too many on the walls of all our exhibition-rooms. Or we sometimes find a great deal of manual ability thrown away upon the *fac-simile* representation of objects that are in themselves not only quite trivial, quotidian, and uninteresting, perhaps even repulsive, save for the glamour-charm shed over them by the witchery of the pencil.

As to their subjects, architectural pictures may be divided into two classes,—that of matter-of-fact portraiture of existing buildings, and that which gives us original compositions, in which the painter shows himself architect also, and can freely follow the impulses of his own imagination, be it ever so luxuriant. Additional interest may, too, be imparted by the introduction of figures that shall be something more than mere subordinate accessories, and give dramatic action. In compositions of that kind, Louis Haghe has shown great mastery; so, too, has W. Collingwood, an artist who is not yet appreciated as he deserves to be, for his skill in representing both the "dead life" and the "living life." For mere still-life representation, I should perhaps adjudge the palm to Joseph Nash, some of whose drawings are in the series of inaccessible private apartments in Windsor Castle. Of one so eminently gifted it is painful to record more, for I have understood that shortly after completing the above-mentioned series of drawings his mind became terribly affected. Certain, at least, it is, that he then all at once disappeared, much to the regret of those who, like myself, had stood fascinated before some of his almost matchless productions. Nash, it may here be added, was a pupil of the elder Pugin, and fellow-pupil of the ultra-Gothicist, his son, Welby.

Pity it is that artists generally do not make themselves so sufficiently acquainted with architecture as to be able to represent its forms intelligently wherever there is occasion for representing them at all. Such knowledge would not come amiss even to the portrait-painter; for he would thereby be able to give us something far less hackneyed, and more sensible also, than the eternal red curtain and bit of a tall column, which, unless broken off much, penetrates into the attics.

Had the committee of the Architectural Exhibition their wits about them, they would endeavour — even with some strain of effort — to correct the miserable nakedness of their walls, with regard to *interiors*. Of those of churches we have enough and to spare; and they are all tethered down to one idea, from which, it seems, they must not even attempt to break loose, or all the orthodox ecclesiologists, alias architectural old women, would dart out all their porcupine quills against the rash innovator. Here, with or without your permission, I break off,—perhaps to break out again afresh.

ART-LOVER.

ART AS APPLIED TO FURNITURE.

AT the last monthly meeting of the Bristol Society of Architects, Mr. C. S. Fripp in the chair, after Mr. E. W. Godwin had made some observations on the progress of the students' class,

Mr. H. Crisp read a paper on Art as applied to domestic Furniture, of which we give an outline:—

The present century, he remarked, has witnessed a revival of art, and this revival has shown during the last few years a decided advance, generally speaking, in the right direction. But with all this little, if any, encouragement has been given to the manufacture of art furniture, the public, as a rule, being quite satisfied to place themselves in the upholsterers' hands, thus being entirely guided and controlled in their selection of the articles they may require, as to what is the correct thing for this room or that room, by the opinions and assertions of a man who, though he may be a respectable and honest tradesman, is, with very few exceptions, no more competent to thus adjudicate than the veriest child. We may often meet with men, and women too, whose knowledge of the fine arts and whose opinions thereon pass current in the world, and sometimes happily right in their choice or judgment in such matters. But, when they come to the question of furniture, all they really know of the matter is what they want, and what they like or dislike, and for which likes and dislikes they can assign no better reason than that they do so like or dislike. What course, therefore, is pursued by those persons of otherwise good and cultivated views when they are called upon to furnish their houses, and in the building and decoration of which they have, perhaps, given evidence of the possession of cultivated minds? They go to their upholsterer, and, if they do not actually ask for his opinion, they tacitly allow themselves to be persuaded into this or that as "fashionable," "genteel," and "much in request." The

result is that, instead of having their walls covered with stories on grounds of plain or diapered colours, you see large and unmeaning patterns, "the last new design," full of confusion and distortion. The same thing applies to their curtains, and hideous and senseless scrolls, and twists, and mouldings, and carving, and perhaps gilding and tasteless decorations, are seen in their massive and expensive furniture. It is really at times matter for wonderment who and where are the designers of all these tortuous twists and absurdities; and what makes the matter more offensive is that in many things, such as glass frames, cornices, &c., all this elaboration and show is but mere deception, consisting of composition work stuck on in different pieces, which many an innocent and unsuspecting purchaser, when too late, discovers to his surprise and cost. It is an easily proved fact that scarcely ever is an article to be found coming from a modern upholsterer's shop which can in any way obtain credit for possessing the commonest principles of good design. How often are to be seen articles of furniture, which, if left almost entirely to their own simple and necessary form of construction and framework, would be good in design and pleasing to the eye, but which are turned into shapeless and ugly objects by having the structure carefully concealed by all sorts of paddings, stuffings, carvings, and twistings. Take, for example, the puffed, and blown-out settees and couches in the fashionably-furnished drawing-rooms, and the common easy-chair of the present day. When we see our domestic architecture improving, why should the accessories of our dwellings be, as a matter of art, so much neglected? Because, unfortunately, so little has the public eye been accustomed to, and educated in any good design or style of furniture, that, from want of knowing better, the prejudice in favour of the before-described upholsterers' trumpery is very strong; and so I expect that art in its application to furniture will have quite a battle to fight, and find but few friends. This, however, should not discourage us, but make us more determined to help it on, and as much as lies in our power we should embrace every opportunity of encouraging its growth by studying it in connexion with every object, however trifling and inferior. Now, the question arises, how to introduce and make popular good designs, which may be generally adaptable and attractive as well as economical. In an economical point of view, until the carrying out of good designs became general, it is to be feared our modern furniture would have the advantage, especially when we consider the tempting advertisements to "those about to furnish," in which every article and requisite are fully described for a house of so many rooms, and the whole to be had for the extraordinarily low sum of £—. Now, the cheapness of this furniture depends on the regular trade system of its construction, one man making exclusively one portion of an article, and in only one pattern; another man another portion exclusively; and so on, machine-like, to the end of their lives. This daily habit enables each one to execute and turn out his part with much rapidity. Again, in this cheap furniture, which so much tempts the public, the very fact of deficiency of art helps the tradesman in selling at low prices, because much bad material and inferior work may be passed off when concealed by mere stuff, having no form or comeliness about it. Again, much of our modern furniture is admired because of the profusion of its so-called ornament, and which, from repetition, has acquired so firm a hold on the minds of ordinary men, that the profusion is taken for art. Now, it cannot be doubted that this error, so firmly rooted in the habits and customs of the century, would make a strong stand against the introduction of any commonsense system of design. "A gradual change from simplicity to complex forms and unlicensed ornament seems to be the fate of the fine arts." This may truly be said of our modern furniture as compared with that of olden times. The question, Can the character of our furniture be improved? presents at first sight an almost overwhelming difficulty. For, "after the eye is accustomed to profuse ornament, simplicity is at the risk of appearing lifeless and insipid;" and this would be the first Paynim knight to battle with in our endeavour to restore the ancient simplicity which was, and is, ever at the root of noble design. . . . . The question naturally arises, How is an interest in our furniture to be created? The reply is,—1. To avoid all complexity of form, all elaboration, all excess and profusion of ornament, thus starting on the real and only foundation of all art work, simplicity. 2. Let each part have, and as far as practicable show, a purpose, both in construction and ornament, and thus say what it has to say. Ornament may be of three descriptions,—carved, inlaid, or painted. In either we may tell a tale or history, and so create immediate interest for the mind.

THE FORTHCOMING DUBLIN EXHIBITION.

A paper on "The Recent Progress and Present State of Industry in Ireland; and the Dublin International Exhibition of 1865," was read at the Society of Arts, on the 14th of December, by Sir Robert Kane, F.R.S., President of Queen's College, Cork, and Director of the Museum of Irish Industry, Dublin, at the request of the executive committee of the Exhibition which is to be held next summer in Dublin.

Sir Robert explained that the opportunity of organizing the Exhibition has arisen from the fact that a number of gentlemen, including the Duke of Leinster, Mr. Guinness, and Mr. Dargan, possessing at once the inclination and the power, have undertaken to provide for the citizens of Dublin a great winter garden and buildings containing concert and lecture rooms, supplying, but on a smaller scale, the resources and enjoyments of the Crystal Palace at Sydenham. An independent executive committee having been formed to organize and carry out an International Exhibition, the directors of the Winter Garden have most liberally placed their fine buildings altogether at the disposal of the committee for that purpose, and the executive committee have gladly availed themselves of this truly patriotic proposal. It has been arranged that all funds arising from the receipts above the payments of the expenses incidental to the Exhibition, shall be vested in a committee of noblemen and gentlemen, under whose direction the excess shall be applied to public purposes for the advancement of arts and sciences in Ireland.

The building is situate on the south side of Dublin, and in what may be considered the most fashionable quarter of the city; close to the terminus of the railway which leads to the beautiful mountain scenery of Wicklow. The space accommodation is very large. The principal portions of the Exhibition will be located in the great conservatories of the Winter Garden, constructions in glass and iron which rival the Crystal Palace itself in elegance of design, although of course much inferior in extent, and affording advantages as to supply of light and means of display which could not be surpassed.

Under these favourable circumstances, he continued, it may be hoped that, not merely on public grounds, but even on the lower but more directly practical basis of individual advantage, we may hope for the co-operation of the manufacturers of Great Britain, who cannot fail to derive material benefit from bringing the products of their factories and workshops under the immediate cognizance of the Irish people.

The executive committee have good grounds for expectation that the industrial resources and products of our Colonies and of the European Continental States, with scarce an exception, will be adequately represented on that occasion. Gentlemen of great activity and intelligence have visited, on the part of the executive committee, the governmental authorities and the industrial centres of the Continental States. They have been uniformly received in a most friendly spirit, and have received promises of active co-operation.

In the discussion which followed the reading of the paper,—

Lord Powerscourt, as chairman of the Fine Art Department of the Exhibition, said he was happy to state that the prospects of the Exhibition in that department over which he presided were most encouraging, and he had no doubt that the artistic display in Dublin, in 1865, would be of a very attractive character.

Mr. Vesy Fitzgerald said, more than anything else with which he was acquainted, these Industrial Exhibitions demonstrated the fact that individual effort, in the present age, attained the largest results when it availed itself of the power inherent in the principle of co-operation; for such exhibitions depended on the co-operation of class with class, of country with country, and of man with man. He expressed his conviction that the principle of improvement inherent in these exhibitions was most powerful in its operation, and that the extent to which it might probably be felt was obviously impossible to estimate.

Mr. Hercules Macdonnell said, that as one of the executive committee, it fell to his lot to put himself in communication with foreign Governments, and more particularly those of Southern Europe. In France he was happy to find that so able and enlightened a Government gave its assistance and co-operation to the enterprise. Prince Napoleon, who was not only a prince, but a man of great talent and large experience in exhibitions, took up the matter warmly, and he (Mr. Macdonnell) had reason to think the opening of the exhibition would be honoured by his presence. Backed by the example of so great a nation, he next proceeded to Belgium, where, he was happy to say, he met with ready and almost enthusiastic co-operation. Thence he proceeded to Holland, where he met a very warm response, as well as at Frankfort and in Switzerland, Italy, and Austria. He believed every country in Southern Europe would be represented in its art and manufacturing productions.

Mr. Antonio Brady said he had been deputed to visit the north of Europe. He had taken the Scandinavian nations, and he also reported good results. The Swedish minister had especially referred to the excessive expenditure incurred in the last Paris and London Exhibitions. He was also met in many places with the idea that Ireland was a sort of Poland, in a state of anarchy and revolution, and there was no security for articles exhibited; and he was glad to find that Sir Robert Kane had given a very different and more truthful view of the general condition of the country. As regarded Denmark, the enlightened Government of that country, from the king downwards, had, after due consideration, promised hearty co-operation. The king, himself no mean artist, had promised to contribute to the Exhibition.

Mr. Chichester Fortescue, M.P., said, he was not prepared to state in detail what the colonies respectively were prepared to do, but in general terms he might safely state that they were ready to respond to this invitation, and that the colonies of Great Britain would be properly represented in the capital of Ireland, as they had been in the capital of England.

Mr. Henry Cole, C.B., said, he hoped the Managing Committee of the Exhibition would provide for that which was now attracting great attention in London, and which might be made an interesting feature of the Exhibition in Dublin, viz., an exhibition of the industry of the workmen of Ireland, as a separate section.

Mr. William Hawes and other gentlemen, including the chairman, Lord Dufferin, K.C.B., also took part in the discussion, which was closed by Sir R. Kane thanking the meeting for the favourable way in which the subject of his paper had been received.

PROPOSED ART-WORKMEN'S EXHIBITION IN MANCHESTER.

We are glad to hear that the arrangement for the proposed Exhibition is making good progress. The council of the Royal Institution have placed their galleries at the service of the Exhibition Committee. The committee have also received considerable encouragement from their wealthier neighbours. The Mayor, the Dean, members of Parliament, bankers, justices of the peace, and a majority of the architects of the city have already given the project their cordial approbation. The committee have received applications for space from decorative artists, designers, wood and stone carvers, makers of encaustic tiles, modellers, glass stainers, &c., and there is good reason to anticipate that the exhibition will add to the reputation of the art-workmen of this district. Every article exhibited will bear the name of its manipulator; this, indeed, forming the fundamental principle of the exhibition.

The circumstance of this being the first experiment of the kind made in the North of England, and embracing as it does every town within twenty-five miles of the Manchester Exchange, will commend it to the support of all who want to see what workmen of the district can do, and who are the men who do it.

Short Water Supply.—Several persons are claiming damage of the Halifax Corporation for the non-supply of water to their manufacturing premises during the late very dry summer. The total claims amount, it is said, to 6,000*l*.

NATIONAL SCOTTISH MEMORIAL.

AMONGST the designs submitted is a joint work by Mr. Joseph Durham, sculptor, and Mr. J. Robinson, architect, and which is proposed to be placed on "Arthur's Seat." The principal feature is a monolithic obelisk of grey granite, nearly 60 ft. high, in front of which stands a colossal statue of the Prince Consort, to be in bronze. The obelisk and statue are erected upon an elaborately-wrought basement of red granite, at the angles of which are seated four winged angels, 9 ft. high, bearing wreaths. This basement is raised upon a flight of steps, with pedestals at each corner, giving the lower portion of the design an octagonal form. Upon these pedestals are lions so composed as to have the effect of guarding the whole structure. The designers have been influenced in adopting this form of design, firstly, by the belief that its contrast with all objects around would ever make it more conspicuous than any other, remaining distinct from the surrounding scenery; and, secondly, by the knowledge of the desire the Prince Consort himself had, that a lofty monlithic obelisk should be erected.

The death of Sir John Watson Gordon, president of the Royal National Academy of Scotland, who had been nominated by her Majesty one of the six members of the Committee of Advice on the Scottish National Memorial of the Prince Consort, having deprived that committee of its only professional artistic element, the council of the Academy have lately held various meetings with the view of considering how they might express their opinion on this important subject; but a letter received from Colonel Phipps by Mr. Harvey, Sir John's successor in the presidentship, nominating him as the successor of the late president in the Committee of Advice, renders any expression of their opinion unnecessary at present.

THE MOSQUE AT HEBRON.

As you have already reprinted in the number of your journal of the 3rd of December all that referred to the mosque at Hebron in my letter to the *Times* of the 28th ult., it will not be necessary for me to repeat what was there so fully described. I would only add, in anticipation of any errors that may hereafter be detected, that the circumstances of my visit were not such as are conducive to accurate plan-drawing or calm architectural observation. During the whole time I was in the mosque I was surrounded by thirty or forty persons, all of whom were anxious to be civil to me,—through an interpreter; while, on the other hand, I was most anxious—not only for my own sake, but for that of those who might follow me—not to do anything that could offend; nor to seem to pry into their secrets more than was necessary for the purpose of my investigation. Notwithstanding this, I feel convinced that the plan I forward herewith will be found substantially correct in all the main features.

The dimensions of the Gothic building, which is the most interesting object in the interior, were obtained first by pacing the whole length in each direction, and then re-pacing each aisle and arcade separately; and as I found the addition of the parts to agree with the totals, I felt sure I had made no mistake there. The length of my paces I afterwards verified by external measurements. If the external walls are 7 ft. 6 in. in thickness, the principal dimensions, 96 ft. east and west, is 1 ft. too small. If they are 8 ft. 6 in. thick—which they may be—my pacing gives 1 ft. in excess. I had no means of measuring heights; so those shown in the section must be taken as eye sketches only. I am afraid I have made the external walls too high, but the excess, in that case, is rather below the floor of the mosque than above it.

The plan of the Mahometan buildings surrounding the court is not so much to be depended upon. While I was examining the court which they surround, I was much more anxious to try and discover some mode by which access might be obtained to the caves below, than to measure or examine buildings of no architectural interest, and whose date was perfectly apparent. One consequence of this is, that I am very uncertain as to the position of the two domes at the north end—the only two in the Haram. I, certainly, at the time, thought they covered the tombs of Jacob and Leah; but in drawing out the plan and comparing it with my notes, I feel very doubtful whether they ought not to be where shown in the plan. They are small and insignificant, like all the buildings surrounding the court.

The dimensions of the exterior may be looked upon as certain within the limit of fractions of a foot. They have been measured by others besides myself, and all seem to agree in making them 198 ft. north and south, and 112 ft. east and west.

The longer faces have sixteen pilasters, the shorter eight, each 3 ft. 9 in. wide, with 7 ft. spaces between; and the angle pilasters are each 9 ft. 6 in., which is the width of the minarets at the alternate angles. The exact thickness of the walls is more a matter of doubt. The entrance doorway has been revetted with marble slabs by the Moslems, and is otherwise so encumbered that the original masonry cannot be seen. From such observations as I could make, I have assumed it at 7 ft. 6 in.; but this, I am inclined to believe, is rather under the truth.

With regard to the age of these buildings, it is easy to assert, without fear of error, that the wall of enclosure is Herodian,—that the Gothic building was erected in the last half of the twelfth or first half of the thirteenth century, and the buildings surrounding the court, by the Mahometans, in the fourteenth century; but when we attempt to fix the exact date of each portion, we are stopped by unexpected difficulties.

Curiously enough, history is entirely silent with regard to the two first, though sufficiently distinct with regard to the third. Josephus, to whom we naturally first turn, does not mention the enclosure. He merely says, "The tombs of the patriarchs were to be seen in his day in the city of Hebron, made of marble, and wrought with the most elegant workmanship." This of course refers to sarcophagi or monuments of some class, not to the enclosure. The description of the Bordeaux pilgrim, in the time of Constantine, is so indistinct we can make nothing of it. Antoninus, in the time of Justinian, says, "A basilica is erected there," "in quadriporticus," whatever that may mean,—"atrium in medio discöopertum;" and Arculfus, at the end of the seventh century, says "that the cave is surrounded by a low wall" (humili circumvertitur muro), a curious expression as applied to a wall certainly not less than 60 ft. in height, however much more it may be, and says nothing of the basilica. We are therefore left to its analogies with other buildings for its date, but in this instance there is no great difficulty. The masonry of the Jews' wailing-place, which is certainly a part of the substructure of the temple as rebuilt by Herod, is identical in all essential respects with the constructive peculiarities of the Hebron enclosure. In addition to this, the remains of a building have recently been discovered near the Church of the Holy Sepulchre at Jerusalem, whose masonry is identical with that of Herod's Temple, and has also the peculiarity of being adorned with pilasters like the enclosure at Hebron.

The only other building with which it can be compared is that at Arak el Emir, alluded to by Mr. Tristram in his letter to the *Times* last week. The usually assumed date of that building (176 B.C.) rests wholly on an assertion of Josephus, who, though so invaluable an authority regarding what came actually under his own cognizance, is never to be trusted without collateral evidence in such a question as whether a building was erected fifty or two hundred years before his time. The building is not a "strong castle," as he asserts,—hardly a residence, most probably a temple, and the frieze of animals surrounding it is so flagrant a violation of the second commandment, as to render it doubtful whether it was erected by a Jew at all. Besides this, the details of the Corinthian order as drawn by De Vogüé, look very much more modern. When De Saulcy's work is published, we may be in a position to give an opinion on the subject. At present, all that can be said is, that the date of the building is most doubtful, and to found any argument upon it premature. We are thus left to the analogy of the two Jerusalem examples, but these suffice to fix the date of the Hebron enclosure within the great building period of the Jews. Between the advent of the Romans under Pompey, and the destruction of the city by Titus, and most probably as near the centre of that epoch as possible.

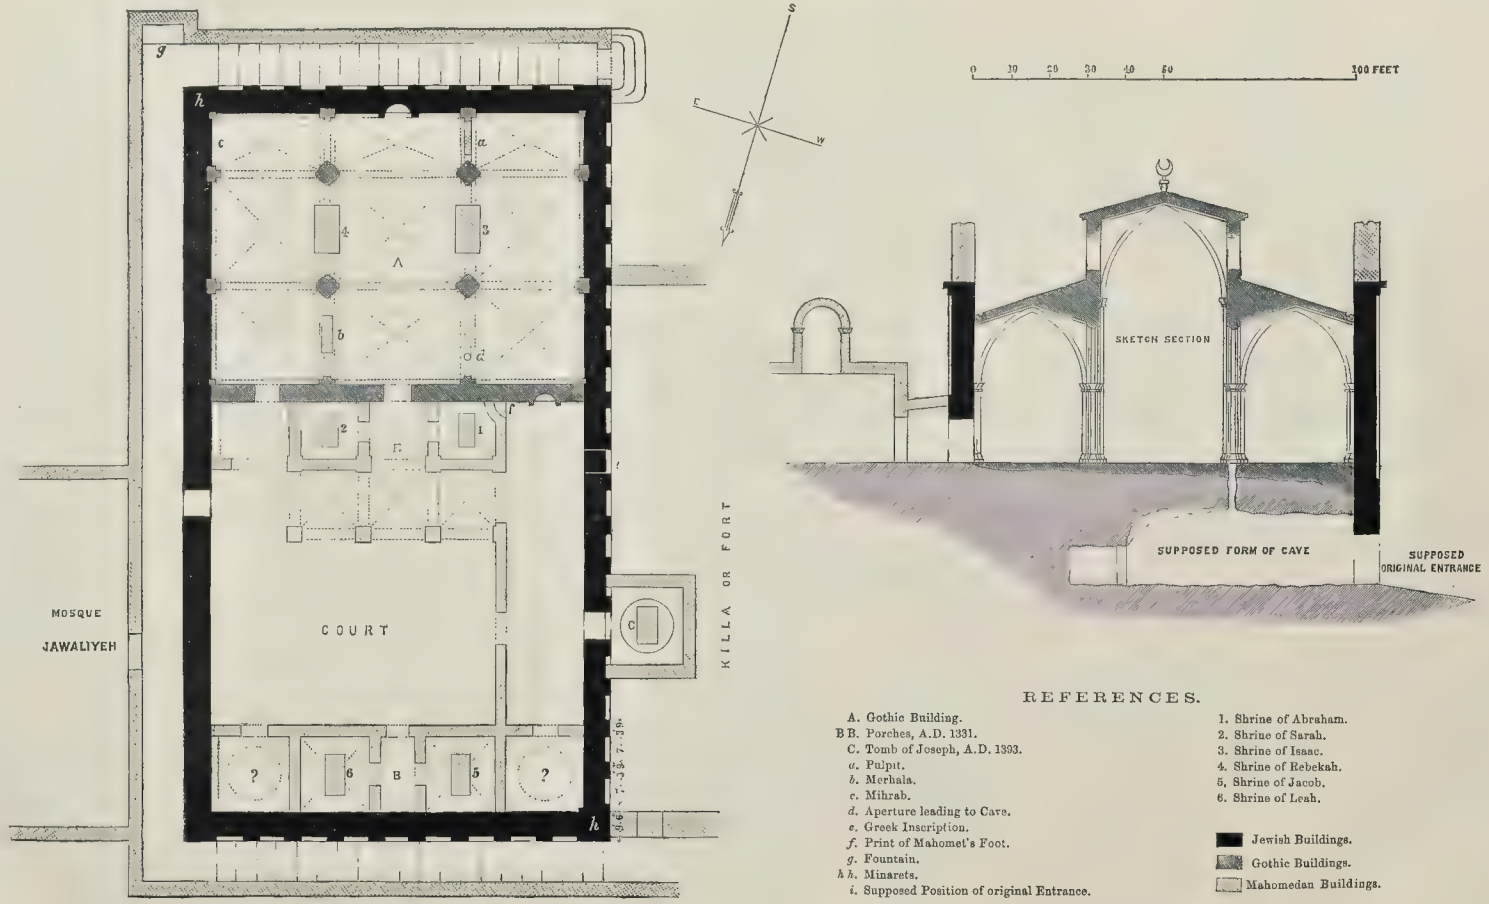
Though we cannot fix absolutely the date of the Gothic building, we can do so within narrower limits than that of the Jewish enclosure. It was certainly erected after 1167, and before 1250; but, when we try to approximate more nearly, we are met by difficulties which the present state of our knowledge hardly enables us to surmount.

If, for instance, we compare the mosque at Hebron with the choir of the cathedral at Canterbury, which is one of our most advanced examples, and the date of which is quite certain (1175—1184), no one would feel any difficulty in asserting that the Eastern example is very much more modern. On the other hand, the French at this period were nearly a quarter of a century in advance of us; but even then were still behind the style of the Hebron building.

But the most curious anomaly is, that generally the Eastern Gothic is what we have been accustomed to regard as the Italian variety, and almost the earliest example we know of this style is the Church at Vercelli, commenced in 1219. If, therefore, the mosque at Hebron, was erected before the destruction of the first kingdom of Jerusalem in 1187, it follows that the Italian Gothic style was perfected in the East at least thirty years before it was introduced in its most primitive form in the West. Count de Vogüé, whose book is certainly the best, if not the only authority on this subject, feels this difficulty in speaking of the churches of Sebaste and Lydda; but the historical difficulty seems to him insuperable; and he is content, therefore, to assume, without further inquiry, an earlier development of the Pointed style in Syria.

If this should prove to be the case, the Western nations must give up all claim to the invention of the Pointed *style*, as they have been obliged to abandon the invention of the Pointed *arch* to the Easterns, and we must be content to rewrite that chapter of our architectural history in a humbler mood. It may be so, but we require much more knowledge on the subject before it can be considered as proved.

Be this as it may, the Church of the Holy Sepulchre at Jerusalem was completed, internally at least, in or about the year 1167-8.



The mosque at Hebron is much more modern in style, but if it was built by the Crusaders during the first kingdom of Jerusalem, it was erected between that period and 1187, when the Saladin took that city, and in that case it remains a solitary exceptional example of its style at that date. As an escape from this dilemma, could it be possible to assume that the Moslems, after the recovery of Hebron, employed a Christian architect to erect a mosque in the enclosure, in the style then usually employed in Syria? We know that Mahomet II. did this on the conquest of Constantinople. Hence the Byzantine form of the mosques of that city. The plan of the building, it must be confessed, somewhat favours this hypothesis. It has no apse, which no other church of that age in that country is known to be without; and the depth from the door to the altar is less than the breadth, which, as a general rule, is a Mahomedan and not a Christian peculiarity.

Since the historical difficulty was pointed out to me, I have tried every means of escape from it, but fear its exact solution must be postponed for future investigation, beyond the fact that it is a Gothic building, erected after the year 1168, and not later than 1250 A.D.

Unfortunately for its effect internally, the modern Syrians have a mania for whitewash more inveterate than that which possessed English churchwardens in the last century; and this building, as well as some of those at Jerusalem, has so frequently been treated with this specific as almost to obliterate all the more delicate mouldings. The effect, in consequence, is light and cheerful, but not impressive. At the same time, it must be admitted that its size is not such as to entitle it to any high rank among architectural examples; nor are its details such as to redeem its limited dimensions.

On the whole, I am afraid that the result of my visit to Hebron must be considered as a disappointment. The real interest of the place centres in the outer wall; and that could be, and had been, examined before I went there. To enter and find nothing inside but a small Gothic building, of somewhat uncertain date and origin, and a few Moslem additions of still greater insignificance, is but an impotent solution of so great a mystery. Had I been able to obtain access to the caves below, the result might have been different; but, so far as I could ascertain, that was impracticable. In one respect, however, it was a success. After admitting me so publicly, it will be impossible to refuse permission to any one who goes properly recommended; and I have no doubt, in consequence, that any defects in my investigation will shortly be rectified, and before long we shall know all that can be known regarding the mosque at Hebron.

JAMES FERGUSSON.

SKETCH PLAN AND SECTION OF THE MOSQUE AT HEBRON.—By Mr. James Fergusson.

ST. ANDREW'S, THURSFORD, NORFOLK: AS RESTORED.—Mr. W. Lightly, Architect.

ST. ANDREW'S, THURSFORD, NORFOLK.

The parish of Thursford is situate a few miles from Fakenham, in Norfolk, and belongs for the most part to Mr. J. S. Scott Chad, at whose expense the restoration of the church is being carried out, under the direction of Mr. W. Lightly. The church, which is dedicated to St. Andrew, is principally in the Perpendicular style, but the arcade and some other parts belong to a much earlier period.

Considerable progress has been made with the restoration; and though the works are for the time suspended, the complete restoration of the old fabric and several important new additions are contemplated. The old roofs of nave and south aisle which were decayed have been removed, and replaced with new open roofs of yellow deal, covered with plain tiles, made of the excellent earth which is found hard by. The tile floor has been lowered, and a Porrit's stove introduced, and new moveable open benches of deal have been substituted for the old pen pews which have been cleared away. The Mortuary Chapel, on the south side of the chancel, has been taken down and entirely rebuilt. In it are placed, temporarily, the organ and the new stained glass for the east window of chancel, which latter was executed by Messrs. Powell, of Whitefriars, from the designs of Mr. Albert Moore. It is in three lancet-lights, and represents the Birth, Resurrection, and Ascension of our Lord, beneath which are the twelve apostles, ranged in two rows. The nave and aisle windows have been filled with Messrs. Powell's quarries. The new font is of Bath stone, with alabaster die: it is raised on three steps: the bowl is sexagonal, and on its several faces are represented the Crucifixion, the emblems of the four Evangelists, and the Cross of St. Andrew. The communion-table of carved oak, is also new: both were executed by Mr. Forsyth, of London. The Mortuary Chapel, which is reached by a flight of steps from the aisle, is built of flints, faced on outside, the buttresses, windows, &c., being of wrought stone, and the shafts to the triple arch next chancel of red Mansfield stone.

THE STORY OF A WOOD-CARVER AT ST. PAUL'S.

More than once we have received from obliging correspondents a copy of a manuscript said to be in the British Museum. It purports to be a letter written by an ingenious country lad, Philip Wood, from London, in 1669, to his "sweet mistress, Hannah Haybittle," only daughter of Ralph Haybittle, at Sudbury, describing the means he adopted to procure employment as a carver at the works in St. Paul's Cathedral, then erecting by Sir Christopher Wren, and runs thus:—

"No. 9, Ivy-lane, London,
September 3, 1669.

Dearest Hannah, my sweet Mistress,—Pray God that this may find my own sweet hearte and lyfe well. I hope that James Herbert put into your hands one letter which I sent. I gave him the letter myself, and he promised most faithfullie to find occasion to conveye it to you. I know, my dear Hannah, you think it both hard and wrong to hide anything from the knowledge of so kind a father as yours. The waggon returns into London on Tuesday, so I went to the yard in Bishopsgate, and waited for it to arrive. At last I heard the bells; and Jim Herbert, as he turned under the gateway, smiled at me pleasantlie, and he said, 'Wait a bit, young chap, I have somewhat to say to thee.' After a while he came to me, and told me how he met you walking on the croft, with your maid Susan, and how he contrived to give you my packet unseen of her. To think of such craft under a waggoner his frock! But no letter from you. He says that you looked well, and seemed happy to receive my letter, and I am contente. But had you no opportunitie to write one line? I know how it is, dear Hannah; you dislike any artifice. Indeed, it is hardly right for me, who owe so much to your good father, even the abilitie to write this, as he sent me, a poor orphan, to the free school,—to tempt you in this matter.

I can no longer put off telling you the good news. God has, indeed, been good to us. Little did I expect such happiness when I left Sudbury last May. That morning, when I looked for the last time from the hill, I thought my hearte would surely burst, and at one moment I was inclined to turn back; but then came to my mind what kind neighbour Smith should say she heard your father say about London; so I plucked up courage, and walked very fast over the Tye. Dear Hannah, it is a very sad lyfe to be alone in a great city. At Sudbury, I did contrive to see you, though at a distance, every day; and I could walk in the pleasaunt fields, and think about you, and read Master Shakspear his plays which you gave me, and which trulie have been, latterlie, with my Bible, my onlie comforte. In the evening I could pass your house to catch a glimpse of your shadowe on your casement, or to hear your spinnet sounding; and sometimes I found the neighbours showing the carvings to a farmer or two who had been at the market; and it was sweete to my poor vain heart to hear them tell how the rich merchant, Master Haybittle, retired from London to his native town, and bought a house, and employed a poor young man who showed some taste for such matters, to carve upon the woodwork elephants and lions, and other wonderful beasts from the distant lands where he used to send merchandise. Then all said the carver must go up to London, and become a great man.

Well, I got to London, but no one would employ me, and my little pittance of money got lower and lower; and I used, for want of employment, to go to the Churchyard of Saint Paul, and watch the building, which will certainlie be one of the wonders of the world. Suddenly it struck me one day, that they would surelie put into such a grand building carvings, such as I have often seen at Melford and the other churches; and I spoke humblie to the foreman, but they repulsed me, saying, 'We want no hedge-carpenters here.' Nevertheless, I went day after day to look on at a distance; and a week yesterday, as I stood as usual, in great admiration, a gentleman approached, with papers in his hand, and he talked with the workpeople; and at last his eye fell on me, and he said to the foreman, 'What does that young man want? I will not have any person about here unless they have business.' And the foreman answered, 'Please you, Sir Christopher, he is a country fellow, who troubles us to give him some of the carving work to do.' On this the gentleman, who I then knew to be the great architect, beckoned me towards him, and said, 'Friend, you want carving work. What have you been used to carve?' Hannah! indeed you will hardly credit it, but I was so confused that, forgetting all but what I earned my bread by whilst I was in the country, I answered, stammeringlie, 'Please, your Worship, Sir Christopher, I have been used to carve troughs.' 'Troughs,' said he, 'then carve me, as a specimen of your skill, a sow and pigs; it will be something in your line; and bring it to me this day week. I shall be here.' On which he went away smiling, and all the foremen and workpeople burst into loud laughter.

I do not know how I reached my lodginge, but when I did I throwed myself on the bed, and shed bitter tears, and reproached myself for losing such an opportunitie of explaining what I had done on your father his house. In the evening the good Quaker woman, whose backgarret I rent, came upstairs, and, entering my room, said, 'Friend' Philip, I have not seen thee since morning; I feared thou wert ill; see, I have brought thee some broth.' But I could not touch it; so she said, 'Tell me, I pray thee, thy trouble; it may be I can help thee.' So I told her, and she said, 'Thou art wrong, for if the man who is building that great steeple-house requires such and such a thing done, why, if thou really hast skill, it will be showed as well in that as in any other matter.' Her words were comforting to me, and I sat up on the bed, and ate the broth; and then I took my last guinea, and I went out and bought a block of pear-tree wood, and worked at my task continually; and yesterday morning I dressed myself in my best, and wrapping it in an apron, borrowed from my landlady, I went to the building. The workpeople jeered me, and pressed very much that I should show it to them, but on no account would I do so. I waited two or three hours, and then it was rumoured that Sir Christopher Wren was arrived with a party of the quality, to whom he was showing the building. At last he and the rest passed where I stood, but when I would have gone forward to speak with him, the foreman and others would have hindered me, saying this is not the proper time; you may see that Sir Christopher is otherwise engaged.' But necessity made me then bolder, and I said, 'He himself appointed me this morning,' and I pressed through them. Directly his eye caught me, he beckoned, and I went towards him, and I bowed and undid the apron, and presented the carving to him. For a minute he held it in his hand,—Oh! deare Hannah! what an anxious minute!—and then said, 'I engage you, young man; attend at my office to-morrow forenoon.' Then he walked on with the party, still holding the sow and pigs in his hand; but when he got a little distance, he turned round, and said, 'Wait until we pass back.' So I waited; and, when they returned, Sir Christopher came up to me, and said, 'Mr. Addison (I think he said 'Addison' or 'Addington') wishes to keep your carving, and requests me to give you ten guineas for it.' I bowed, and then he said, "I fear I did you some injustice, young man; but a great national work is entrusted to my care, and it is my solemn duty to mind that no part of the work falls into inefficient hands. Mind and attend me to-morrow.' So I bowed, and ran home, and my kind landlady was also overjoyed.

This morning I have been at the office, and I am indeed engaged to do carving in this most wonderful building.

I leave at your discretion to acquaint your father of this matter, and if you would write to me only one line, it would increase the happiness of, Deare Hannah, your faithful servante untill deathe,

Philip Wood."

It is added,—

"The following notice of Wood's further career appears in the Report of the Commissioners of Public Works, respecting the building of St. Paul's Cathedral:—

'Philip Haybittle, subpœned from Sudbury, Suffolk, deposed that he received certain sums of large amount, as per receipts, given during the years 1701-2-3-4-5-6-7, for carved work in the Cathedral Church of Saint Paul. On inquiry from their honours the Commissioners, respecting the difference betwixt his name and the name on the various receipts, the said Philip Haybittle deposed, that he married Hannah, only daughter of Ralph Haybittle, some time a Merchant in Cheapeside, and by the terms of the will of his said father-in-law, he was obliged to change his name.'"

The story would seem to be all untrue, but it is sufficiently interesting to excuse us for finding room for it. At the date given, 1669, nothing had been done towards the rebuilding of the cathedral, the first stone of which was not laid until 1675.

ON THE PRODUCTION OF NATURAL FORMS BY ART AND MANUFACTURE.

Under this title, the first series of Cantor Lectures was commenced, at the Society of Arts, by Mr. Waterhouse Hawkins, on the 12th inst. The lecturer said the subject to which he especially desired to direct attention was the application of natural forms to art and manufactures. In his introductory remarks he referred to the greatly advanced appreciation of art by the English people since 1851, and pointed out the educational advantages which had resulted from the Great Exhibition, by the establishment of a National Museum of Art Industry at South Kensington. Notwithstanding the improved appreciation of art by the public, and the advantages which existing art-collections afforded to the student and workman, he nevertheless deplored the inability of the English artist to produce designs suited to the requirements of the British manufacturer, equal to those produced by the foreign designer and artist. He then proceeded to discuss the reason of this deficiency of the English artist, and stated that he considered it resulted from the nature of the training to which art-students were subjected in England, as compared with the system pursued in continental countries. In England the art-instruction tended to create skilful copyists, great precision, and steadiness of hand in the use of the pencil, but at the same time crippled the mind; whereas on the Continent the student was taught to take broad views of art by observing the structural forms of objects in nature, a system which left the mind and hand much more free. He believed that the Englishman's impediment was not a want of material in which to produce, nor yet examples to study, but resulted from a heavy drill, which created good imitators, but did not tend to create inventors. In order to invent or create successfully good designs for the art-manufacturer, it was necessary that the artist should possess a thorough knowledge and appreciation of the structure of natural objects, without which knowledge it was impossible for the draughtsman to adapt the frames of men or

animals to the requirements of the ornamentist and the processes of production; and ornament, if produced without a knowledge of structure, inevitably resulted in imperfect drawing or unnatural distortions. He then proceeded to point out that one universal law of structure pervaded the whole of the animal kingdom, a knowledge of which enabled the designer to correctly represent and apply the conception of his mind to the ornamentation of matter.

The second lecture, given on the 19th, treated of the unity of plan in the external forms of animals, the just appreciation of which facilitates the work of the artistic producer, and adds to the enjoyment of the intelligent possessor of works of art.

SANDRINGHAM.

THE Prince of Wales's Norfolk hunting-seat is making rapid progress in improvements. The house is a plain brick mansion, having on the east front a modern Gothic porch, with stone dressings and carr stone panels. The west front is stuccoed, and has a terrace. At the south end of the house is an orangery. To the house, which has about twenty-seven rooms, exclusive of the servants' hall, &c., there has been at present nothing done, but a design for a new house has been made by Mr. Humbert, architect. At the termination of the fine avenue of limes that runs towards Dersingham, from the east front of the house, have been fixed the Norwich gates. To these wings have been added, consisting of wrought-iron palisading, introducing the hawthorn, with a casting formed of the rose, shamrock, and thistle. Above the shafts are capitals enriched with foliage in wrought iron, the whole being ornamented, as also are the two stone piers, by heraldic animals supporting shields. Great improvements have been made in the garden and pleasure-grounds in front of the house, chiefly under the superintendence of Mr. Toward, her Majesty's gardener at Windsor. The comptroller's new residence near the church is built of shell carr, magnesian lime, and Mansfield stone. The Bachelor's Cottage is in the Swiss style, and is built with hollow-brick walls, with a rough-cast exterior. The Prince's stables originally accommodated nineteen horses, but have been enlarged so that they can now accommodate forty. The fittings comprise all the modern improvements. Over the stables are built sixteen dormitories, and under the clock-tower has been fitted up a meat-room, and a kitchen has also been built for the cookery for the men. The old floor of the coach-house has been taken up and relaid, and Sandwich girders have been inserted. The drainage of the stables has been rendered complete, and the court-yard has been partially paved with granite. The entrance to the court-yard is not yet completed, but iron gates are to be attached to the stone and brick piers already erected, and a couple of wings of iron palisading. The park wall has been extended, and four entrances provided with oak gates and brick stone piers. The gardens comprise sixteen acres of the Home Farm. Seven acres have been inclosed by brick walls averaging some 14 ft. in height. On the south side of the north wall are arranged 300 feet of conservatories for grapes, peaches, &c., and on the opposite side of this wall buildings are being provided for fruit-rooms, gardeners' dwellings, and the officers nominally required in connexion with gardens of such an extent. There being 5,400 ft. of length in these walls, a large number of wall-fruit trees may be trained on it. On the outside, at the north-west corner of the walls, a semi-circular house for camelias has been made. The whole of the works connected with the garden have been designed by and executed under the immediate superintendence of Mr. James Carmichael, the working steward.

The unsightly buildings which formerly existed on the site of the old keeper's house have been removed, and at the extreme east corner of the park, on a pleasant piece of table-land, is built a Gothic house for the head keeper. It is built with Holkham white brick, projecting quoins, with shell carr panels, the ornamental parts consisting of string labels, and bay windows of freestone. The roof is covered in with blue and red Staffordshire roofing tiles, laid in designs. There are a dairy and other outbuildings attached, which form a prominent feature in the general effect of the building. In connexion with this house is another range of buildings, consisting of a venison larder, cowhouse, stables, and other offices, likewise built of the carr stone of the neighbourhood. On the table-land in front of the keeper's house, a pheasantry consisting of eighteen yards, each being 30 ft. square, has been constructed. Three other keepers' houses have been erected at Wolferton, Dersingham, and Frankfort. A game larder has been erected in the park, near the house, octagonal in shape, and built with brick quoins and shell carr panels, and has progressive eaves, supported by rustic fir trees. The roof is covered with Staffordshire blue and red tiles. The interior is fitted up with galvanised iron rods and hooks, and is capable of holding from twelve to fifteen hundred head of game. The floor is laid with rubbed York stone, having a channel formed connected with the drainage outside. Contiguous to this is a new gun-room.

The Prince has evinced great interest in the cottage accommodation on his estate. Several new cottages, of good construction, are inhabited, and others are on the eve of completion. The cottages are built of brick and carr, with slate roofs; the windows and door frames of English oak, the former being of an extra size, giving an abundance of light to the lofty rooms. The cottages are set back 30 ft. or 40 ft. from the road, so as to afford an opportunity for a garden in front. The garden for the growth of vegetables extends back in the rear of each cottage about 100 ft. What was formerly a barn has been converted into a school-room, and a house for the mistress, with the playground and garden in front, enclosed with a wall. At Appleton, a house is in course of erection for Mr. S. O. Cresswell, who farms about 800 acres on the estate. The farmhouse is of some considerable extent; it is built of the carr stone of the neighbourhood, with angles of brick burnt on the farm. Contiguous to this house are the farm premises, which were erected last year, and cover a large area of ground. The keeper's house, cottages, well, game larder, and Appleton premises have all been designed and erected by Messrs. J. & M. Goggs, of Swaffham.

BRADFORD STREET IMPROVEMENTS.

IN the case Pearson *v.* The Corporation, before a Sheriffs' jury, Mr. Price stated the case of the claimant, whose property is situate in Bridge-street, opposite the end of Market-street.

The claimant was called and examined, after whom Mr. Wm. Andrews, architect, &c., gave his evidence. He said that he had had considerable experience in erecting warehouses and shops in this town. Property had increased in value in Bradford during the last ten years, and there had been a continuous increase latterly. He had made a valuation of the claimant's property as it now stood, and (giving the rental of each floor) it produced a gross rental of 306*l*. 6s. 6d. He deducted 10 per cent. for leakages, insurance, and repairs, which was 30*l*. 10s. 6d., leaving 275*l*. 10s. He proposed to lay out 250*l*. in making alterations and improvements in the buildings, and, making a deduction of 7½ per cent. upon this, 18*l*. 13s., the net rental would be 256*l*. 15s. He capitalised this sum at 17 years' purchase, which would realise 4,364*l*. He added 20 per cent. for compulsory sale, 873*l*. He added for 60 yards of open frontage, the property of the claimant, the value of 5*l*. per yard, or 300*l*. This made a total of 5,537*l*.

Mr. T. Dixon, land agent and valuer, supported the evidence of Mr. Andrews; as also Mr. George Knowles, architect. Other witnesses were called, after which Mr. Lloyd addressed the jury for the Corporation, maintaining that 19 years' purchase on the present net rental, which was 185*l*., was ample compensation, with 10 per cent. for compulsory sale.

Mr. G. B. Smith, surveyor and land agent, was called. He estimated the rental deducible from the claimant's property at 200*l*. He made a deduction of 7 per cent. for insurance, repairs outside, and leakages, which gave 185*l*. as the net value. He put upon that 19 years' purchase, which gave a capitalised sum of 3,515*l*. He added 10 per cent. for compulsory sale, 351*l*. 3,866*l*. 10s. was the full value of the property.

Mr. E. Milnes, architect, expressed his concurrence in this estimate. He said, however, that if the property was his, he would gut it, and would convert it into a large ironmonger's shop; and he estimated that by an outlay of 340*l*., a net rental of 290*l*. might be obtained.

Mr Joseph Smith, land agent and surveyor, supported the evidence of the previous witnesses, and the jury gave a verdict for the claimant of 5,000*l*.

THE ARCHITECTURAL ASSOCIATION.

GOLDSMITH'S ART.

THE ordinary meeting of members of the Architectural Association was held on Friday evening (the 9th instant) at the House in Conduit-street.

The chair was occupied by Mr. Joshua Webber, the vice-president.

The following gentlemen were elected members of the Association:—Mr. A. W. Tanner, 15, Devonshire-road, Greenwich; Mr. L. T. Richel, 2, Richmond-villas, Pinner; Mr. Walter Seagill, 12, South-square, Gray's-inn; Mr. J. Allen Britton, 10, Lime-grove, Lewisham; Mr. Hunt, 5, Theresa-terrace, Hammersmith; Mr. Corbin, 50, North End, Croydon; Mr. William Orellier, 4, Holland-place, Brixton-road; Mr. Henry Walker, 16, Gloucester-road, Regent's-park; and Mr. R. Mann, 2, Ashburnham-villas, Greenwich.

Mr. W. C. Brangwyn read a paper "On the Goldsmith's Art in the Middle Ages, including a Description of the various Instruments used in the Services of the Church." The processes to which he referred, were engraving and niello, filigree, enamel, repoussé work, piercing cast and chased work, and jewelling. The decoration of a metal surface by engraving was of very high antiquity, and was practised by the Egyptians, Greeks, and Romans. Niello merely differed from engraving by the lines being more deeply cut and filled in with a composition of sulphate of silver. A specimen was to be found in the borders of Dr. Rock's portable altar at the South Kensington Museum. Monumental brasses might be described as niello on a large scale. This art was one of the most beautiful practised in the Middle Ages, and was first found in work of the seventh century. From thence to the twelfth century it flourished, but fell, like enamel, into disrepute, and from the twelfth to the fifteenth century was almost lost sight of. One of the most beautiful specimens of Italian niello was a pax engraved by Maso Finiguerra, in 1452, at present preserved in the museum at Florence, and of which two sulphur casts were in existence. Filigree was a very beautiful and widely used decoration, and was principally used during the eleventh, twelfth, and thirteenth centuries, but the work of the twelfth century was of the finest character. This mode of ornamentation was used very much in book-covers, chalices (the stems of which in some instances were covered with it on an enamel ground), reliquaries, and, in fact, every article in which the art of the goldsmith could be brought into requisition. Enamelling was, undoubtedly, very ancient, but it was questionable whether it existed previously to the Christian era. The Saxons seemed to have cultivated the process very little, and the only specimens remaining were the jewel known as Alfred's, and some brooches found at Abingdon and London, and now preserved in the British Museum. A few finger-rings had also been found, in which the engraved letters were filled in with vitreous paste, but bearing a closer resemblance to niello than enamel. Repoussé work was the mode of enriching a plain sheet of metal by means of raising the surface by punches into figures, foliage, and other patterns. For large works and groups, it was usual to model the subject in brass or some inferior metal, and then beat over it a very thin plate of silver. Among the finest works remaining in this style of art, were a frontal of silver of the twelfth century, the pala'd'ora, of gold and jewels in the treasury of St. Mark's, Venice (said to be Constantinopolitan work of the tenth century), and an altar frontal of silver at Moura. In all the more rich and elaborate works of Mediæval times jewels were an important feature, and were employed in combination with filigree on the covers of books, on knobs of chalices, and sunk in the surface of Limoges work. Having described in detail the manner of ornamenting the various vessels used in the service of the Church, Mr. Brangwyn particularised specimens in the South Kensington Museum, and recommended a careful examination and study of them.

At the conclusion,

The Chairman observed, that the subject which Mr. Brangwyn had chosen for his paper was a most interesting one. Some valuable specimens of the goldsmith's art in the Middle Ages were to be found in the South Kensington Museum, but the finest examples,—the marvels of the art,—were to be found either in the old cathedrals or the religious houses of the Continent. There was a very fine collection at Milan, and also in the crypt of the chapel of San Carlo. He hoped that the members of the Association would study the paper, and profit by the examination of the objects within their reach in the South Kensington Museum.

Mr. G. H. Birch called attention to some examples of the art which had come under his own notice on the Continent, and, in reply to an observation from the Chairman, said that the general complaint there was that the best specimens of the goldsmith's art had found their way to England.

Mr. Spiers said, he was not aware that engraving was the earliest mode of decorating a surface: filigree work appeared also to be a very primitive description of ornament. The most beautiful ornaments found in the neighbourhood of Rome were those taken from the Etruscan tombs, and which were somewhat similar in design and treatment to those found in Ireland, and were to be seen in the Architectural Museum at South Kensington. It was to be regretted, however, that some of the finest Etruscan ornaments were immoral in their character, and consequently could not be repeated in the present day. Mr. Brangwyn had referred to early altar fronts, to be found in Italian churches. Many of these were very beautiful, but he thought it was to be regretted that in the later works pinnacles, crockets, and buttresses, were represented, which had nothing whatever to do with metal work. There was not, in his opinion, any work of the present day (not even in France, where the art was brought to a very high state of perfection) which could compare with the wrought metal work found at Pompeii, the beauty of which was almost incredible. Some fine specimens of it were to be found in the British Museum, and he recommended an attentive inspection of them. The reason why the fine arts,—painting, metal-work, sculpture, &c., were brought to such perfection among the ancients, was, in all probability, because the greatest minds of antiquity, having neither books nor printing whereby to convey their thoughts, resorted to the arts. No wonder, therefore, that they were the finest creations of the human mind. Were a similar system pursued in the present day the results might be the same. How beautiful, for instance, would be a capital carved by Tennyson, if he could succeed in putting all his poetry, fancy, and sentiment into it.

Mr. Ridge observed, that the study of metal-work showed, that in olden times architects appeared to work upwards from details, but that in later days the principle was reversed, and we worked from architecture down to details.

Mr. Birch referred to the circumstance that the old key pattern of the Egyptians was now used in jewelry work to the exclusion of almost every other form.

Mr. Blashill could not agree in thinking that architectural types were not appropriate forms in which to model vessels used in the ceremonies of the Church. Many of these objects, especially reliquaries, were designed as the models of particular churches; and, in his opinion, nothing could be more legitimate.

A vote of thanks was accorded to Mr. Brangwyn for his paper.

The Chairman announced, that the next drawing for the class of design would be the transverse section of a church; and that at the meeting on the 23rd instant, the prize essay on iron would be read.

FROM AUSTRALIA.

Melbourne.—Mr. Hassall, the superintending-inspector of the Central Board of Health, has published some very sickening details in a report on the sanitary condition of Melbourne. The local *Despatch* gives a digest of its contents, viz., that until a system of underground drainage be established, the health reports must always contain similar complaints; that in other respects the city has greatly improved in cleanliness; that a great change for the better has taken place in the common lodging-houses; and that the Chinese lodging-houses in Little Bourke-street are periodically overcrowded, "which is an evil," says the *Despatch*, "easy of cure." Not so easy, perhaps, as the writer fancies!——The City Council have at last arrived at the determination to spend a whole hundred pounds upon the erection of a temporary fish-market near Prince's Bridge.——A Mr. Phillips has invented a traction engine, and has said that it would prove of great utility in opening up parts of the colony not at present traversed by railways. "The mode of traction is by a kind of chain of levers, the engine being attached to a central iron rail firmly fixed in the road to be traversed." "Mr. Phillips calculates that the engine could travel up or down a very steep grade if necessary;" and proposes to drive the engine at a speed of ten miles per hour. A proposal for testing the practical value of Mr. Phillips's invention will be made at a meeting which we are told will soon be held.

Sandhurst and Echuca Railway.—The celebration of the "keying in" of the last rail on this railway came off on the 17th September, when Messrs. Collier, Berry, & Co. entertained their workmen on the banks of the Murray,—that is, at Echuca. About 120 guests started from Sandhurst terminus in the forenoon at 10, and reached Echuca at 1 p.m. A sumptuous repast was served to the guests; after which, Mr. Higginbotham, the engineer-in-chief, drove in the last key, amid the cheers of the workmen assembled. The workmen, to the number of about 500, were then invited to a "spread" prepared for them in the open space fronting the Bridge Hotel. The local papers say that the opening of this railway will be of immense importance, as it will connect Melbourne, Sandhurst, and Echuca. The latter is situate on the Murray, and the Murray is connected with the Edwards, Murrumbidgee, and Darling rivers, which, it is expected, will connect the Billabong, Lachlan, and Goulburn. When the railway party reached Echuca, one steamer was starting for Hay (on the Murrumbidgee), and another had just arrived from Wahgunyah. The extension line to Echuca (60 miles in length) has been finished in less than two years. The whole line of rail now runs from the seaboard at Melbourne to the river Murray, the boundary of New South Wales, the total length being 160 miles, which is the most extensive line in operation in the southern hemisphere. This line will bear comparison, says a local paper, with any of the oldest in Europe; but the enterprise has not pleased the New South Wales Government, which has imposed a restrictive duty on all goods crossing the river into New South Wales. "The Murray River Railway," says another Australian journal, "is at length completed, and the inhabitants of Riverina are now within six hours' ride of the sea. Already the goods trains have commenced running, and the first of the season's wool has been sent to Melbourne. A side line conveys the bales direct from the river-steamers to the railway, so that there is but one unloading." The passenger traffic was expected to commence in November last.

FOREIGN NEWS.

Stettin.—At Stettin, an industrial exhibition, under the direction of the Polytechnic Society of that town, is to take place during the months of May and June, 1865. All nations are invited to contribute specimens of industry and manufacture, the committee of management, of course, reserving the right of refusal when objects are either trivial or inadmissible. The opening is to take place on the 15th of May, and the closing on the 30th of June. Exhibitors are requested to send to the committee a specification of the objects proposed to be exhibited, not later than the 1st of January, 1865. In order to cover the expenses of the undertaking, exhibitors are required to make two payments, one according to the value of the article exhibited, and another for the space occupied. The space is to be paid for at the rate of 2½ silbergroschen per Prussian square foot, whether it be wall or counter; the other sum is at the following rate:—From 1 to 49 thalers, 10 silbergroschen; 50 to 149 thalers, 20 silbergroschen; and those above 150 thalers value are to pay half per cent. Objects occupying considerable space, such as machinery, carriages, &c., are only liable to half the above rates. A Prussian foot is 0·3138 mètre, and the square foot = 0·09847044 square mètre, or 152·64 square inches English. Taking the thaler (30 silbergroschen) at 3·75 francs, or 3s. sterling, the price of the space at the Stettin Exhibition turns out to be 2·83d. per English square foot, and at the rate of 3·17 francs per square mètre.

Naples.—The inhabitants of Naples are in high spirits on account of the proposed public works. Deficient in water-supply, over-crowded in population, in want of a new port, and of a railway communication with the rest of the Italian lines, the city is on the point of having these evils remedied by the new administration. As to the water-supply, seven quarters out of twelve have none but what is collected from the rain in cisterns. Five only have running water supplied. Signor Abate, the engineer, proposes to make use of the ancient Roman aqueducts. Two new quarters have been commenced; one at Chiaja, another at l'Arenaccia, towards Vesuvius. As to the port, General La Marmora has listened to the prayer of the Neapolitans, and accorded the new port to be made at Naples instead of far off from the town near Portici. He also showed his good-will for these people in giving preference to the line from Naples to Foggia by Benevento, which could be finished in April, 1866; while the other railway, on which they were at work already, by Salerno and Basilicate, could not be completed under five years. There is no reason why Naples, hitherto a military port, should not become a commercial one.

M. Boullé, ancient architect of the town of Rennes, and who resided for some time past at Saint Bricuc, died a few days ago.

On the 11th inst., died, M. Gerson Lévy, aged 81. He was the founder of the Imperial Academy of Metz, and honorary president of the Jewish Society of Arts and Manufactures. Formerly a bookseller, he was *gérant* of the *Indépendant*.

According to a report just issued upon the Paris sewerage, the quantity added to the group this year has been 39 kilomètres,—15 in the central division and 24 in the suburbs; last year the length added was 36 kilomètres. In order to give some idea of the difficulties to be overcome in giving to the Paris sewerage a somewhat regular fall, it is necessary to remark that the slopes of the basin of the Seine, instead of descending in a uniform inclination towards the river, are rendered very irregular by natural or artificial hillocks. Thus, between the Faubourgs St. Antoine and du Temple there projects, from the heights of Belleville a counterfort which, extending from the Barrière des Amandiers to the Boulevard du Temple, terminates at the foot of the Rue Meslay. To the south-east of this undulation a sort of plain, formerly a swamp, extends, and is separated by the Canal St. Martin into two portions, the Faubourg de St. Antoine and Le Marais. At the north-west of the basin a valley, opening out as it approaches the river, is bounded by the heights of Montmartre, Beaujon, and Chaillot, on the north and west. On the south bank of the river three valleys intersect the river banks, and are separated by the Butte des Moulins, the Montagne Geneviève, and a sort of hill upon which stands the Church of St. Germain des Près. All these irregularities of surface have been studied by the engineers so as to give to the subterranean arteries as nearly a uniform inclination as possible.

COMPETITIONS.

Bolton Town Hall.—Forty designs for this building (to cost 40,000*l.*) have been sent in, and were exhibited to the inhabitants on Monday and Tuesday in this week. Considering that the designs have been sent in under mottoes, and are supposed to be anonymous, it is strange to find the local *Chronicle* saying, after giving some general particulars, "We append minute details from the designs of *our local artists*, and conclude our present notice with the gratifying reflection that Bolton stands well in this honourable competition." It does not read as if it *were* very honourable.

The Brighton Workhouse.—The vestry, having, as was anticipated, rejected the scheme for the erection of a new workhouse at a cost of 30,500*l.*, being the amount of the lowest of sixteen tenders, have requested the guardians to offer 200*l.* as a premium for fresh plans for a workhouse, to hold 600 inmates, at a cost not exceeding 18,000*l.*, although it appears to have been not an unprecedented circumstance that 700 persons have been squeezed into their present workhouse. The guardians have resolved to communicate the result of the vestry meeting to the Poor-Law Commissioners, who had given their consent to the proposal of the local guardians to erect a workhouse at an estimated cost of 23,000*l.*, which the lowest actual tender, however, had increased to 30,500*l.*

Church of Shire Oaks, Nottingham.—Will you pardon me pointing out an error in "E.'s" list of new bells, supplied by Messrs. Taylor, Loughborough:—"Shire Oaks, Nottingham, a peal of five; tenor, 8 cwt., the gift of the Duke of Devonshire, who built the church." The church was built by the late Duke of Newcastle, from designs of Mr. J. L. Hine, architect.—C. H. W.

"WANTED, A GENERAL FOREMAN."

WE insert the following letter that builders and contractors may know opinions entertained by some of their workmen:—

Sir,—I frequently observe in the advertising pages of your publication, "A General Foreman Wanted," and "Wanted, a Situation as a General Foreman;" and I always consider these announcements make both the master builder and the would-be general foreman appear ridiculous. If a man can be produced that thoroughly understands all the trades of a builder, he ought to be exhibited. It is quite time the master builders' eyes were opened to the way these "general foremen" place their men in each other's way, and do some part of their work two or three times over through ignorance. Some builders select a carpenter, others a mason, to be their "general foreman," and expect him to know everything, and to be over every man in a building, which makes them of so much consequence that it is quite an obstruction to the other foremen; and many of them are afraid to do their work the right way, because this general foreman has ordered them to do it differently.

I have been a foreman of painters, both in town and country, for the last twenty-five years, and have thrown up two appointments because I would not allow a carpenter to interfere with my department; and I would resign the one I now fill rather than submit to such an insult; but my employer, being a practical man, is well aware that my assertions are correct. There should be a practical foreman for each trade, and no foreman allowed to interfere with any branch but his own. T. M.

ST. FIN BAR'S CATHEDRAL, CORK.

I PERCEIVE by a newspaper paragraph that the demolition of St. Fin Bar's Cathedral, at Cork, has commenced. Whilst I am truly glad that a noble structure is to replace the shabby apology for a cathedral which has long disgraced Cork, may I ask if the architect will not spare the ancient west doorway, a remnant of Mediæval work, which was spared when the cathedral was rebuilt in the Classic style in the last century. Of course, it would not be suitable for a grand west portal; but yet it would be most desirable now, when so many of our antiquities are disappearing, to preserve in some part of the new fabric this peculiar and graceful archway, just as we often find Norman doors remaining undestroyed through several rebuildings in the Gothic style. I anxiously hope to hear, through your columns, of the fate of the old archway, and relic of the Middle Age St. Fin Bar's. J. W. HARDMAN, LL.D.

THE CAB FARE ACROSS HYDE PARK.

IN your paper of the 3rd inst., you have a short article headed with the above words, and you conclude that article as follows:—"Surely we ought to have the matter put at once upon a better footing than this!" implying that cab-drivers should be made to know that the notices placed by the authorities of Scotland-yard, at Queen's-gate, on the south, and Victoria-gate on the north, are binding on them. Such, however, was not the case up to Tuesday last, as on that day a cab-driver positively denied any knowledge of such notice, and refused to recognise it. Can you, Mr. Editor, do nothing more for the public in this matter? A BROMPTONIAN.

THE VALUE OF LAND IN THE CITY OF LONDON.

ON the 17th, at the Lord Mayor's Court, in a railway compensation case, Hodges *v.* The Metropolitan Railway Company, some evidence was given of the value of land in the city of London.

On the part of the claimant, 4,275*l.* were asked in May, 1863, which was said to be too little. The second claim was 5,600*l.*, and the surveyors examined on the present occasion made the amount 7,112*l.*

On the part of the company the value was estimated by the witnesses at about 3,500*l.* The theory was, that as land was so valuable in the City, by removing the stables, which were part of the property, the land would be more valuable for warehouses. The property was in Milton-street, which had been known as "Grubb-street."

Mr. Serjeant Parry, for claimant, said that all small property would soon disappear in the City, and large buildings take their place. Property had "wonderfully gone up" in the City.

Mr. Lloyd said he wondered at the claim, or he should rather say, from his experience, he wondered not at any claim made against a railway. The property was leasehold, and held for fifty-nine years, and could not be converted into warehouses.

The jury, after a long investigation, assessed the compensation at 6,250*l.*

THE ROMAN REMAINS IN CHESTER.

AT the second monthly meeting of the session of the Chester Architectural Society, Dr. Brushfield read a paper on "The Remains of the Romans in Chester, with a detailed Description of those discovered in Bridge-street, in June, 1863." The lecture was copiously illustrated with drawings prepared expressly for the evening. In opening the subject the lecturer said,—I regret my assent to give this lecture the more because the discovery has excited a very large amount of interest in the archæological world, through a paper which was read before the society of Antiquaries in January last, by Mr. W. Tite, which I believe to be inaccurate. He then proceeded to give a slight historical sketch, to show what it was that induced the Romans to come to this part of Britain, and their reason for fixing on the present site of Chester, followed by a brief glance of the 20th legion. He then described the site of the recent discovery of the Roman remains, followed by a detailed description of everything that was discovered. The lecturer said he believed that the remains threw considerable light on the formation of that great peculiarity, the Chester Rows. In speaking of the origin of the city, he said that, although we had no authenticated account of the first founding of Chester by the Romans, yet it probably took place between A.D. 78 and 80. Was Chester a British or a Celtic town before the Roman period? Wherever the primeval inhabitants dwelt, they left their marks in the form of earthwork, funeral remains, &c., none of which was there any record of having been discovered in the immediate vicinity of Chester. Agricola probably selected the site of Chester as the principal basis of operations, forming a large entrenched camp after the ordinary Roman model, the stamp of which Chester, in its surrounding walls, bears to the present day. In regard to any doubts as to Chester being the Roman Deva, he need only quote the words of one of the authors of "Magna Britannia,"—"That Chester was the Deva of the Romans is a matter beyond all controversy." The lecturer stated that the excavated portion which contained the bulk of the Roman remains (which we have ere now described), was about 128 ft. in length by 88 ft. in width. After describing these remains, he stated that not one is now visible in its original position. Some have been used in the buildings now in progress, some have been removed to the Water Tower Museum, and some are in private hands; so that, with regard to their original site, they are now practically obliterated. In their original position they were of the utmost interest to us as lovers of archæology, and of practical use to antiquarians in general, as exhibiting some new phases of Roman work, and for the sake of comparison with other remains of the same era in other parts of Britain; and, moreover, they bore with them all those marks of veneration, a feeling for which is so prevalent among the large section of the travelling Americans, one of whose principal delights in visiting the old country is for the purpose of seeing and examining the venerable ruins and remains of past ages which he does not possess in his own land. The paper then went on to examine the remains in detail, first noticing the manufactures in clay, such as plain tiles, pantiles, flue tiles, cylindrical tiles, hexagonal roof slabs, and tile tombs. Passing on, it took into consideration Roman pavements, including not only the floors of residences, but those of court-yards, offices, and the streets. Then came a notice of the tesselated pavement, the various shapes and colours being described, and specimens of them exhibited. Dr. Brushfield concluded by stating that, at the next meeting, he proposed to describe Roman masonry in Chester, and after that the hypocaust. He would then enter into the question as to the character of the building,—whether it was, as Mr. Tite said, a temple, or whether it was a public building at all; and, if a public building, whether it might not have been a series of public baths.

SOUTH LONDON WORKING CLASSES INDUSTRIAL EXHIBITION.

SIR,—Will you permit me, through your columns, to remind your readers who intend either to compete for the "Medal of Merit" Design, or to become exhibitors, that the days are growing short for either designs or applications being sent in. Full information is given in your advertising columns of to-day, and while the Committee have no desire to exclude any from competition, permit me to remind "Southerners" that delays are dangerous.

GEORGE M. MURPHY, Hon. Sec.

WINTER CLOTHING.

NOW that the cold weather has come on, this important subject, in connexion with the life and health of both old and young, urges itself on the notice of every one. Attention to it is requisite at all periods of life; for it is often during the prime and stalwart age of men that the want of a little attention to winter clothing lays the foundation of serious and fatal disorders in after-life; and as regards young children, it has been the opinion of both English and foreign medical men, that the practice of exposing their arms and legs to such an extent as is usually done, is the cause of a considerable amount of disease and loss of life. In winter, at all events, the extremities should be well covered from the cold. When boys come to be about seven years of age, their legs are encased in trousers, and the arms covered to the hands. *Why should children at a more delicate age be exposed to the weather?*

As regards persons of greater age, especially those who are exposed out of doors during the winter, without any considerable amount of active exercise,—take, for instance, police constables, soldiers on guard, and many others,—in the way that clothing is usually made there is no extra protection to those parts of the body which are especially exposed to the action of the cold, although the chest is generally protected. To provide against this, which is often the cause of rheumatism, in the winter-time there should be extra defences to the legs and arms, and particularly to the joints. There need not, in making these provisions, be any interference with the *cut* of the tailor. A little attention to this might be the means of preventing long intervals of uselessness and pain. Of course, amongst private persons this matter must be left to the consideration of individuals; but amongst the police, the military, and the sailors of the navy, this provision should be made by Government clothiers.

Can any one give a reason why in winter, as well as in summer, the throat and chest, which are in most need of protection, should be left exposed by the dress of the sailors in her Majesty's service? If we were to resort generally to such a practice throughout the metropolis, we should have an account of the ravages of bronchitis which, when reported by the Registrar-general, would create both surprise and alarm.

METROPOLITAN BOARD OF WORKS.

AT the last ordinary weekly meeting of the Board the following among other subjects came before the Board:—

Improvement of Park-lane.

This question was brought forward by the Solicitor, who stated that the next step to be taken was to present a petition in favour of the "Piccadily and Park-lane New Road Bill," the usual notices for which had been served. Mr. Richardson observed that it would be absurd to present a petition in favour of the Bill, as though the Board really intended to carry out the improvement, when there was a great difference of opinion among the members as to the course which should be adopted. Another member suggested that the subject should stand over. The Chairman replied that it was necessary the petition should be presented at once, in order that the Board might maintain its *locus standi* before the House should it be decided to make the improvement. After some conversation the petition was sealed.

Improvements in Thoroughfares.

A report was brought up from the Building Act Committee, recommending that the line of thoroughfare extending from Rose-street on the north-eastern side, and from King-street on the south-western side, to Long-acre, in the parishes of St. Paul, Covent-garden, and St. Martin-in-the-Fields, be re-numbered; that the names King-street and New King-street be abolished; and that the line of thoroughfare be named Garrick-street. The report was agreed to. The same committee recommended that the line of thoroughfare between Newington-causeway and Harper-street, now Union-road and Horsemonger-lane, be all called Union-road. Agreed to.

The Pneumatic Despatch Company.

The engineer reported that the plan proposed by the Pneumatic Despatch Company for laying their tubes in High Holborn would seriously interfere with the sewers, and he recommended

that the solicitor be requested to enforce the necessary requirements of the Board in respect to them. The suggestion was put as a resolution and adopted.

FROM SCOTLAND.

Edinburgh.—The hall of the Parliament House has, during the last few years, been enriched by statues and portraits of departed members and senators of the College of Justice, and the whole of the east side of the hall now presents the appearance of a picture-gallery. During the last day or two several works have been added to the already large collection. The most attractive of the recent additions is the full-length portrait of Lord Brougham, in his robes as Chancellor of the University, painted by Mr. Macnee, of Glasgow.

Glasgow.—At the last fortnightly meeting of the Police Board, it was stated that during the past fortnight 307 cases of fever had been reported to the Sanitary Committee, against 261 during the previous fortnight; and 8 cases of smallpox, as compared with 2 of the previous fortnight.

Falkland.—A bronze statue is to be erected here to the memory of Mr. Tyndall Bruce. Mr. John Steell, R.S.A., of Edinburgh, has already designed and cast the statue, but some delay has occurred in consequence of the absence of Mr. Bryce, the architect, who is in Spain. The figure is in a standing attitude, and cloaked.

Health of Scotland.—The Registrar-General's return for the eight principal towns of Scotland shows births and deaths both above the average in the month of November. It appears from this return that 44 per cent. of the deaths occurred among children under five years of age. One death in every three was caused by the zymotic (epidemic and contagious) class of diseases; one in every ten of all the deaths was from typhus fever, which was by far the most fatal of the epidemics, and, indeed, was alarmingly on the increase. Aberdeen was the only one of the eight towns in which the number of deaths from this cause was not greater than in the previous month.

CHURCH-BUILDING NEWS.

Newington.—The first stone of a new Church in Newington, to be called the Church of All Saints, has been laid by the Bishop of London. The site of the new church is the central piece of ground in Surrey-square, Kent-road, Newington. The ground on which the church is to be built is about an acre in extent, and is the gift of the Rev. J. C. Clark, B.D. The new church will be in the Decorated style, with open timber roof, and will afford accommodation to 800 persons; half the seats free. The dimensions will be 120 ft. long by 60 ft. wide, and the entire cost is estimated at 5,000*l.* The architect is Mr. R. Parris; and the builder, Mr. W. Higgs, both of London. About 1,000*l.* are still required to complete the building fund.

Hackney.—The Church of St. Michael and All Angels, South Hackney, has been consecrated by the Bishop of London. The site was given by Dr. Williams, and a large portion of the amount required was raised by public subscription. The style of the building is Early English, the dimensions 175 ft. by 60 ft., and 45 ft. in height. Sittings have been provided for 1,200 persons, a large portion free. The total cost, inclusive of tower and spire, will be about 5,500*l.*, nearly 500*l.* of which are still to be raised.

Kempston (*Beds*). The Parish Church has lately undergone considerable repairs and improvements. The roof of the nave having fallen into decay, the Vestry determined to restore it. Tenders were invited, and the late Mr. Conquest became the contractor, under the superintendence of Mr. Horsford. The new roof of oak beams and deal planking, covered with lead (the principals resting upon carved stone corbels), follows the general plan of the former roof. The battlements have been re-constructed and slightly heightened; the exterior of the nave, aisles, and tower re-pointed; the windows of the tower restored; and the doorway of the porch renewed. In the interior a change has been effected by the removal of the western gallery and the opening of the Norman arch of the tower, which was previously blocked up and also hidden by the organ. The west window has been filled with figured quarries, by Chance, of Birmingham, at the cost of Master Talbot Barnard, of Kempston Hoo. The walls of the nave, aisles, and tower have been re-plastered, and the benches re-varnished. The expense incurred by the parish in carrying out these works is 440*l.*, the remainder (about 100*l.*) being defrayed by Mrs. Talbot Barnard, through whose liberality also the organ, in the hands of Mr. J. Trustam, of Bedford, has been improved, and placed at the east end of the north aisle. Three *coronæ* have also been presented by Mrs. Barnard.

Wokingham.—The Bishop of Oxford has consecrated a new church in the old Forest-road, called the Nine-mile Ride, running from Ascot and Finchhampstead, and traversing the heaths and plantations between Wokingham and Wellington College, chiefly occupied by brickmakers and "broomdashers." The church is placed on a gentle eminence, by the roadside, near the entrance to Ravenswood, heretofore Hanniken's Lodge, the seat of Captain Sawyer, who has given the site. It is a very simple structure, in the style of the thirteenth century, of brick and Bath stone, the latter sparingly employed. It consists of a chancel, a nave, and narrow north aisle, separated by wooden pillars, and a southern entrance under a double arch, surmounted by a gable, with louvre boards, for the reception of a bell. The cost was 800*l.*, and the church will accommodate 160. The architect was Mr. Butterfield. The edifice is dedicated to St. Sebastian. The west window is a representation of his martyrdom, treated in Mediæval fashion. For the present the building is a chapel-of-ease to the old church of All Saints, at Wokingham.

Batcombe.—The church of Batcombe, in the diocese of Salisbury, has been re-opened. The rood-screen, of Hamhill stone, which separates the chancel from the nave, has been restored in accordance with the old one, seriously damaged by the falling in of the chancel arch while the work was in progress. The nave roof-ribs, in the few places where they have decayed, have been replaced by new work, toned down to agree with the remainder. The walls of the nave have been made in keeping with the new chancel. An east window of Hamhill stone, like the others, replaces the old one, which has been inserted in the north side of the nave; and the chancel roof coincides with the other parts, decorated with carved bosses in oak. An ancient piscina was found built into the wall of the chancel, and has now been placed for its proper use. It is in the form of a small pillar, and of somewhat similar character to a very old font which has now been put under the tower arch. The porch has been rebuilt. The designs were supplied by Mr. J. Hicks, of Dorchester, architect, and they have been executed, under his direction, by Mr. Wellspring, of the same place, builder.

Llanwrin, Machynlleth.—The parish church has been re-opened for divine service, after undergoing a restoration, at a cost of nearly 1,100*l.* The style is Early English. Mr. Benjamin Ferrey was the architect, and Mr. T. Cloutman clerk of the works. The old stained glass of the east window has been restored and reframed by Messrs. Lavers & Barraud, at the expense of Sir W. W. Wynn, bart., who contributed altogether 500*l.*

Rawdon.—The church has been almost entirely rebuilt, and enlarged by the addition of a new south aisle and chancel chapel. The new edifice has an open high-pitched roof, which is boarded on the under-side with deal, stained and varnished. The windows are in the Geometrical style. Two of them have been filled with stained glass from the works of Mr. Wailes, of Newcastle-on-Tyne. The seats are open, of deal, stained and varnished. The improvements have been carried out under the superintendence of Mr. A. Crawford, architect. The total cost of the alterations has been about 1,200*l.*

Long Sutton (*Lincolnshire*). Sutton Church is about to partake of the benefit of the spirit of restoration that characterises the age. Mr. Slater has been called in to give plans. The church is remarkable; and should means be raised for a roof of high pitch, with new west window and clerestory consistent, its general character will be enhanced. The upper and available clerestory, as it exists at present, is debased, and spoils the appearance of the church.

Oundle.—The church, after having undergone a restoration from plans prepared by Mr. Scott, has been re-opened for divine service. The galleries have been removed, as have also the high-backed pews, and in their place are carved oak open seats. The western arch was formerly blocked up by some boarding. This has now been removed. The windows have been restored, and a stained-glass window has been put into the chancel by Clayton & Bell, of London. The figures in the first flight represent the Apostles St. James, St. Matthew, St. Mark, St. Peter, St. Paul, St. Luke, St. John, and St. Jude. In the second flight are represented the Nativity, the Baptism, the Crucifixion, the Resurrection, and the Ascension of our Saviour; and, in the last flight, the Enunciation, the Presentation, Christ's Agony in the Garden, St. Peter and St. John running to the Sepulchre, and the Charge to St. Peter. The stonework has been repointed in the nave, transepts, and aisles; and that in the chancels and chapels has been plastered. The whole of the walls and arches were formerly covered with plaster and whitewash, a specimen of churchwardens' architecture of former days. Attached to the church there is a crypt, which was formerly used as a charnel-house: this has now been cleaned out, and is used as a receptacle for fuel. The edifice is heated on Mr. Gurney's principle, now in use in the Houses of Parliament. The chancel is not yet finished, as subscriptions are now being raised to purchase a reredos. Mr. Walker, of London, is building a large organ for the church. The restorations have been carried out by Mr. R. Hall, of Nottingham, whose original contract was 3,500*l.* The total cost of the restorations, however, it is expected, will amount to about 5,000*l.*

Kirstead.—The church of this parish has recently undergone extensive restoration, and has been re-opened for Divine service. A tower has taken the place of the wooden *campanile;* and an apsidal chancel in the Early English style has been added to the church. The lights of the chancel are lancet-shaped and all stained glass; while the glazing of the nave is semi-opaque, with the sacred monogram introduced throughout. The pulpit and font are new, and the church has been re-seated. The architect employed was Mr. H. W. Hayward, of London and Colchester; the contractor being Mr. Wordingham, of Norwich.

Lowestoft.—A circular was issued in October last inviting plans for the proposed Cunningham memorial church, the site of which is fixed in the square, at the bottom of Nelson Score. The building was to be in the Pointed style, with stone dressings, to contain 400 sittings for adults and 100 for children—all on the ground-floor; the sittings to be open, and of stained deal; the whole, including gas-fittings, not to exceed in cost 1,200*l.* Seven gentlemen were applied to for designs, but only two were sent in, which were submitted to the committee, when that of Mr. Phipson, architect, Ipswich and Norwich, was selected.

Ragnall (near Retford).—The parish church of Ragnall has been restored and re-opened. The old church consisted only of a nave and south aisle, with a tower at the west end. This has been enlarged, and a new chancel aisle has been erected. The chancel is nearly as long as the nave. The chancel aisle is approached by a Third Pointed arch, and the aisle is attached to the chancel by two arches resting on pillars, with the abacuses ornamented. The roof is now an open one, and all the stalls are free and unappropriated. There is a new stone font near the entrance to the belfry. The east window, of three lights, is a memorial one. In the centre is the Crucifixion. The window is a memorial one, by Mr. Wailes, of Newcastle. The altar is reached by three steps. The floor is of encaustic tiles, of different patterns and colours. The nave is lighted up with four three-light windows, filled with cathedral glass and edged with clear glass. The stonework was done by the late Mr. William Lee, of East Retford, and the woodwork by Mr. Tomlinson.

Oxford.—We may add to our brief notice last week of the works in Worcester College Chapel, though the information has been given before, that Mr. W. Burges was the architect, and Messrs. Harland & Fisher were the decorators employed.

STAINED GLASS.

Blunham Church (*Beds*).—The east window of this restored edifice has been filled with stained glass. The old east window was an insertion of the most debased style of the Perpendicular period, flat-headed and disproportionate; but has been replaced by a window of the fourteenth-century style, designed and completed by Messrs. Ward & Hughes, of London. There are four lights, which contain representations of four great events in our Lord's life upon earth. In the upper portion of the window there is a quatrefoil containing a representation of the Saviour in judgment. In the tracery on each side are angel figures, and in the four divisions below are the emblems of the Evangelists. Then come the chief subjects which fill the four principal places

between the mullions. In the first compartment is a representation of the "Adoration of the Magi," with a scroll beneath bearing the announcement "Unto us a child is born;" in the second, "The Crucifixion," with the passage inscribed "It is finished;" in the third, "The Ascension," and the words "I ascend unto my Father;" and in the fourth, "The Angel at the Sepulchre" announcing "He is not here, but is risen." There is canopy work over these subjects.

Chichester Cathedral.—A painted window has just been added to those which already adorn this cathedral. Although every scrap of the old painted glass which existed here was destroyed during the Cromwellian period, when the city was besieged by Sir William Waller, yet it is rich in modern painted glass. There are a good many windows by Wailes, of Newcastle, nearly all those at the east end of the building being his work, as well as the two west windows. There are also specimens of the work of O'Connor and of Gibbs, of London; of Hardman, of Birmingham; of Willement, and of Miller, of London. The new window is the work of Messrs. Clayton & Bell. The stonework of the window has been restored under the superintendence of Mr. J. Marshall. It now consists, as it did originally, of two lancet-headed lights, surmounted by a cinquefoil. The unsightly window which it replaces was only placed there some sixty or seventy years ago. This is a memorial window, as nearly all the others are, and the expense of its erection was defrayed by Miss Hersee, of Chichester. There are four medallions, which contain representations of the principal events in the life of St. Peter. The first compartment gives his call by the Saviour, the next his walking upon the sea, the third the transfiguration of our Saviour, at which he was present, and the last his release from prison. In the cinquefoil above, the head of St. Peter is represented, and in two smaller circles below those of St. John and St. James, each with his distinctive emblem. The spaces between these medallions are filled with coloured diaper work, and the whole surrounded with a border.

Congresbury Church (Bristol).—It is said, that a young lady of thirteen—Miss Brown, of Glastonbury—has presented thirteen painted windows to this church.

Sutton Church.—A stained glass window has recently been placed in the south chancel aisle of the parish church, in memory of Laura Frances Still. In the centre light is a representation of the Crucifixion as recorded by the evangelist St. Luke. The figures at the foot of the cross are "Mary, the mother of Jesus" and "the Disciple whom he loved." Below, in the same light, is represented the offering up of Isaac, foreshadowing that greater sacrifice which is commemorated above. In the northern light is depicted the agony of the Saviour in the garden, an angel presenting the cup. In the foreground are the three disciples asleep. In the light on the other side is the Resurrection. Our Saviour is seen coming out of the tomb, the aureola encircling the body, while the guards are falling to the ground from fear. In the upper tracery of the window is the glorification or enthronement of our Lord as described in Revelations. In the two small trefoils are angels, respectively representing Alpha and Omega. The designs were furnished by Mr. Bensley, of London, to whom the execution was entrusted. The glass was from the manufactory of Messrs. Lavers & Barraud, of London. We understand the latter have a commission in hand for filling in the centre light of the east window.

Culham Church.—Messrs. Clayton & Bell have lately erected in Culham parish church four windows, of early type, corresponding with the latter part of the thirteenth century. The windows are situate on the south side of the church, and combine two of two lights and two of single lancets. The two-light windows contain in the one case four incidents illustrative of the parable of "The Good Samaritan," and in the other a similar number selected in illustration of the works of mercy. The former, looking south, contains the following incidents:—The Attack by the Robbers; Priest and Levite passing by a wounded Man; the Succour by the Good Samaritan; the Journey to the Inn. The latter, looking east, represents the following mercy works:—"Thirsty and ye gave me drink," "Hungry and ye fed me," "Sick and ye visited me," "Naked and ye clothed me." The parable window is treated with canopied panels in two tiers. The mercy-works window has a proportion of grisaille in the place of canopies. The two single lights contain respectively figures of SS. Peter and Paul, under low canopies, with panels of floriated ornament above and beneath. A mural brass, designed also by Clayton & Bell, is to be affixed near the largest window in the nave, with the inscription, "In Dei honorem." The windows on this (south) side of the nave, and those in the transept, were placed to the memory of James Morrell, of Headington Hill, and lord of the manor of Culham. The vicar and the committee, as soon as there are sufficient funds, intend to place painted glass also in the only remaining window, on the south side—a lancet.

Bremhill Church (Wilts.)—A memorial service has been held in this church to "inaugurate" a window erected in memory of Henry Drury, late rector of the parish, and for a short time Archdeacon of Wilts. The late archdeacon had restored his church, but the west window in the tower had been left undone. This has now been finished, the architect who was called in by the committee being Mr. Butterfield, and the artists in glass were Messrs. Hardman, of Birmingham. The window is a rather large four-light one. In each light is a subject, representing respectively,—1, Christ cleansing the Leper; 2, Christ feeding the Multitude; 3, Christ giving Sight to the Blind; 4, Christ raising the Dead.

Lichfield Cathedral.—There has recently been placed in the south aisle of this cathedral a memorial window representing several scenes of the scriptural account of David and Goliah. It is dedicated to the memory of their fallen brethren in arms, by the officers of the 64th (Second Staffordshire) regiment, past and present.

St. Anne's, Dublin.—Three memorial windows have been erected in this church, by Messrs. O'Connor, of London. One side of the church is now altogether filled with painted glass, except the window adjoining the apse.

Books Received.

WE at present simply announce the publication of "The Gentleman's House; or, How to Plan English Residences," by Professor Kerr: an octavo volume of 484 pages, with forty-four large plates, mostly of plans (many of them necessarily from our own pages), twenty woodcuts, and a descriptive Index. Every architect, and a great many others, must obtain this book, which is the result of much careful study by a well-qualified mind. Mr. Murray is the publisher.——Let us also mention, for the information of our readers, and we may hope to the advantage of the author, that "The Farm Homesteads of England, a Collection of Plans of English Farms existing in different Parts of the Country, with a Digest of Leading Principles," by Mr. J. Bailey Denton, is now completed, and is issued (by Messrs. Chapman & Hall) in one handsome volume, with sixty-eight lithographed plates and various woodcuts of details. It will be found of value by all who are interested in the subjects of which it treats, and has our cordial recommendation. We shall return to it.——We have received several Illustrated Books for Children, scrawled over on the outside and defaced "with the publishers' compliments." Both the art and the literature within seemed to be exactly worthy of such treatment, and they have been consigned to the waste-paper basket.——"Daddy's Makings, Little Rhyming Undertakings," deserves precisely the same treatment. It is really a public duty to protect the taste of poor little children from such eye-damagers.

Miscellanea.

THE BAR-GATE, SOUTHAMPTON.—We are authorised to state that the restoration of the Bargate was carried out under the direction and superintendence of Mr. J. G. Poole, Architect and Surveyor to the Corporation; Mr. Stevens being the contractor who has executed the work.

INDUSTRIAL EXHIBITION FOR READING.—A public meeting has been held in the Town-hall, Reading, according to the local *Mercury*, when resolutions in favour of holding a working class industrial exhibition in the town-hall in June next, and of raising a guarantee fund for the purpose, were unanimously passed.

WEST DERBY LOCAL BOARD SURVEYORSHIP.—In our paragraph last week, noting the raising of Mr. Orridge's salary, the figures should be reversed, the surveyor's salary having been increased to 250*l.* per annum, and the proposal of 200*l.* negatived.

THE LOCOMOTIVE AND THE BALLOON.—The terrestrial and aërial powers of locomotion were very nearly coming to close quarters on the 11th inst., near Colombes. The train from Paris to Rouen had to slacken pace on account of Godard's fire-balloon being on the rail. The telegraph wires were damaged by the grapnels.

ROYAL GALLERY OF ILLUSTRATION.—We understand that Mr. German Reed, induced by numerous requests, has set aside Tuesday and Thursday morning, during the holidays, for the representation of his "Opera di Camera" entertainment, which will consist of Mr. Macfarren's "Soldier's Legacy" and Offenbach's "Too Many Cooks." Mr. and Mrs. Reed, with Mr. John Parry, will of course appear as usual in the evenings.

INDUSTRIAL ART AND THE SOCIETY OF ARTS.—At the meeting, on Wednesday, of the Society of Arts, a paper by Mr. Davenport, on the efforts of the Society to promote Industrial Art progress, was read, and an interesting discussion took place on the subject, the report of which, however, we must postpone till next week. The works of art submitted in competition, about ninety in number, are now on view.

ROME SUBTERRANEAN.—The projected work of the Chevalier de Rossé, entitled "La Roma Sotterranea Christiana descritta ed illustrata," is published by order of the Pope. The *Publishers' Circular* says,—The first volume of this important publication, which will probably contain a far more complete account of the traces of the Early Christian Church in the Catacombs than has yet been presented, is now published at the price of 64½ francs. It contains 40 chromo-lithographic illustrations in large 4to. The extent of the work is not yet determined, but each volume will be issued to subscribers independently.

WASTE-PIPES.—I quite agree with those who trace the source of poisonous smells in a house to the supposed traps of the waste-pipes. In fact, these traps very often supply a house with poisonous gas, just as a balloon is supplied, *i.e.*, by a small pipe laid on to the main. The importance, therefore, of proper traps is not to be over-estimated. Allow me to state what I have done, in many cases, to prevent the danger. I have taken the waste-pipe through the wall, and made it discharge its contents on to the top of a trapped grate outside the house, thus preventing any direct communication between the sewer and the interior of the house.—W. JACKSON.

CONGRESS OF SOCIAL SCIENCE ASSOCIATION.—At a meeting of the council, held on the 16th inst., the place for the next annual meeting was considered, Mr. Edwin Chadwick, C.B., in the chair. A deputation from Sheffield, headed by Mr. Roebuck, M.P., and including Alderman Parker and other members of the corporation, attended. A deputation from Gloucester had conveyed an invitation to the Association at the previous meeting. On the motion of Mr. Godwin, seconded by Dr. Lankester, and warmly supported by the Rev. Dr. Burgess, Col. Sykes, M.P., and other members, it was resolved that the next annual meeting should be held in Sheffield, the metropolis of iron and steel, as Mr. Roebuck called it. The deputation, on being informed, said the decision would afford the town great gratification.

REPORT ON VARIOUS HOSPITALS OF GENEVA, TURIN, AND MILAN.—This is a document, by Anthony Roulliet, addressed to the French Minister of the Interior, and is an instalment of the information which is being collected by a commission appointed, by imperial decree, to inquire into the alimentary and sanitary systems of hospitals. The *Journal of the Society of Arts* says,—The inquiry is intended to embrace all the hospitals of Paris and London, and also those of several other towns in France and other countries. The returns obtained from the French hospitals, with the aid of the authorities, are said to contain much important information. As regards London, it is said that nothing has yet been done. The report includes, amongst other things, plans of the buildings, apparatus for ventilation, systems of washing, cleansing, baths, medical and pharmaceutical services, and tables of mortality.

Indestructible Ink.—A receipt for a new kind of indestructible ink is given in one of the German scientific journals, and may interest our readers. The ink is said to be composed of twenty grains of sugar dissolved in thirty grains of water, to which are said to be added a few drops of concentrated sulphuric acid. Upon heating this mixture the sugar becomes carbonized by the acid; and when applied to the paper it leaves a coating of carbon which cannot be washed off. This stain is rendered more permanent by the decomposing action of the acid itself upon the paper, and when thus made it resists the action of chemical agents.

Pneumatics applied to Telegraphy.—The Electric and International Telegraph Company have lately opened a central station in York-street, Manchester; and to facilitate the despatch of messages to it from their branch offices at Ducie-buildings and Mosley-street, they have connected the offices with pneumatic message or carrier tubes, similar to those they have applied in London and Liverpool. The new system will enable the company to perform the service required of them more expeditiously and cheaply, and to obviate the liability to error consequent upon the transmission of messages by telegraph between the central and branch offices.

Salvage for the Great Eastern.—There *must* have been some wrong-headed mismanagement connected with the past history of this great ship. The American Courts have just given what appears to be a righteous decision against the late management and in favour of Mr. Towle, an American engineer, who was a passenger in the ship from New York in September, 1861, when her rudder-post, it may be remembered, was twisted off, and she was left for several days at the mercy of the waves. After her captain and crew had all failed to regain the control of the rudder, Mr. Towle volunteered his services, and succeeded in saving both ship and crew, passengers and cargo; but the managers or owners refused to recognise or reward his services because he was a passenger and had an interest in saving the ship as a means of saving himself. This was a mean excuse; and the American Courts have just awarded Mr. Towle 15,000 dollars out of the results of an arrest at New York.

Rochester: an Ancient Building.—During the time the workmen of Messrs. Foord & Sons were engaged in excavating and removing the foundations of the old Crown hotel, which has recently been demolished to make way for the improved approaches to Rochester Bridge, they came upon a vaulted building, which appeared to have lain some depth below the old hotel. Several archæologists examined the building, which was pronounced at first to be a crypt of an old chapel which formerly stood at the spot, and was believed to have been built somewhere about the eleventh century. Subsequent researches, however, led to the opinion that it was a kind of corridor of a house formerly occupied by one Simon Potyn, who kept the Crown Inn, about the middle of the fourteenth century.

The Manchester Ladies' Sanitary Association.—The annual meeting of this association has been held in the mayor's parlour, at the Town Hall. The mayor presided. On the table there was a large variety of tracts, such as those which the ladies are in the habit of distributing to the poor. The Rev. Mr. Richardson read the report, which detailed the great amount of benefit that had arisen through the visits of the ladies to the homes and haunts of the intemperate, the degraded, and the poor, and also stated, that after the last meeting many ladies had joined the association. The annual payment for membership was only 2s. 6d. Mr. P. Turner moved a resolution, "That the members of this association earnestly invite the hearty co-operation of those who feel how real and widely spread are the evils of intemperance and inattention to the laws of health." To carry out the suggestion, he said it would require the co-operation of every kindred mind, and he believed the ladies might congratulate themselves that they formed as good a bond as any association in the city, and he certainly believed it to be the most humane. He particularly urged upon the ladies to advise in their visits vaccination, and the doing away with opiates. Infanticide, too, was now very prevalent; this was a dark blot upon us, and one which ought to be repugnant to the best feelings of our nature. The resolution was unanimously passed.

Fires in Churches.—A correspondent of the *Times* recommends all church flues to have a connexion, by means of a gutta-percha pipe, with a water-tank, so that when overheated they would melt the pipe, and become deluged with water.

The Law of the Streets.—The United States Circuit Court, New York, has given a verdict of 4,000 dollars to a person for damages sustained while crossing the street from a stage-coach. The law is that pedestrians have the first right to the crossing of the street on foot.

Paignton, South Devon.—The Local Government Board for this district are about to exercise the borrowing powers of the Act for carrying out a system of sewerage. Mr. Edward Appleton, of Torquay, has been engaged to prepare the scheme and superintend the execution of the several works.

Local Government Act.—At Bishop Stortford, in consequence of complaints as to the state of the lower drainage, the local Highway Board called a meeting, which was attended by a large number of the inhabitants, to consider plans offered by Mr. J. Adams, for the disposal of the sewage, at a cost of from 2,500*l.* to 3,000*l.*, when it was nearly unanimously resolved to take the proper steps for the adoption of the local Government Act.

Railway Matters.—A sad occurrence has taken place at the Blackheath Tunnel, where a ballast train had come to a stand from the slippery state of the rails in the tunnel. An express train was waiting a signal that the way was clear which signal appears to have been given while the ballast train was at a stand in the tunnel. The express train ran into the ballast train, killing at once five persons and seriously injuring many others.——The traffic receipts of railways in the United Kingdom amounted, for the week ending the 3rd of December, on 11,732 miles, to 608,064*l.*; and for the corresponding week of last year, on 11,395 miles, to 568,875*l.*; showing an increase of 337 miles, and of 39,189*l.* in the receipts.

Sanitary Condition of St. Mary's, Islington.—The Medical Officer of Health for the parish of Islington, reports, for November, as follows:—The deaths for four weeks have again risen to nineteen above the corrected mean for November. But it is to be remarked with this fact that the number of cases of sickness has not risen proportionately to the mortality, but has been smaller than in October. The deaths in four weeks have risen from 216, in October, to 308; while the cases of sickness have fallen from 2370 to 2286. The mortality from scarlet fever, though greater than in October, has not exceeded the usual November average.

Edinburgh Architectural Association.—This association held their usual monthly meeting, on the 14th inst., in the rooms of the Institute, George-street, Mr. J. W. Smith, president, in the chair, when a paper "On Building" was read by Mr. R. T. Shiells. The subject was treated in a practical manner. The various kinds of foundations met with in Edinburgh and the adjoining district were explained, as well as the methods adopted for avoiding settlements and the prevention of damp rising in the walls. Allusion was also made to the most improved systems of house-drainage and mason-work. A criticism was then given by Mr. Robertson, followed by discussion, in which many of the members took part.

Monthly Report on Health of St. Marylebone.—The report for November, of Dr. Whitmore, the medical officer of health for the parish of St. Marylebone, has been printed, by order of the vestry. It states that, "the weekly returns of the registrar-general, for the month of November, show a gradually increasing mortality in the metropolis, which in the third week became excessive, and subsided slightly in the fourth week. Precisely in the same ratio has the mortality of St. Marylebone progressed, and from causes very nearly identical. The deaths from all causes in the parish, for the four weeks ending Saturday, the 26th ultimo, amounted to 350, the average number for the corresponding month of the past eight years being 317; this large excess is referrible to the somewhat sudden accession of inflammatory diseases of the respiratory organs, consequent, probably, upon the great reduction of the temperature in the first fortnight of the month, and the prevalence of easterly and north-easterly winds.

Traffic on Clifton Suspension Bridge.—During the first day of regular traffic over the Clifton Suspension Bridge, more than 12,000 persons passed. The toll is a penny each way, but "return tickets" cost only three halfpence.

St. Mary's Tower, Taunton.—As we noted at the time, the cost of the repair of St. Mary's Tower, which has just been effected by Mr. Davis, the builder of it, amounted only to 50*l.* 8s. It was at one time feared that the damage by lightning was much more extensive. The outlay will be paid by the insurance company.

Opening of Romsey Corn Exchange.—A new Corn Exchange has been opened at Romsey by Lord Palmerston, who has shown a lively interest in the undertaking. The building has been advanced far enough towards completion to enable the Romsey Agricultural Society to hold its annual dinner in it.

Lyttelton.—*The Cathedral.*—Mr. Robert Speechly, appointed by the cathedral commission, with the approval of Mr. Scott, to superintend the building of the cathedral, arrived in the *British Empire*, just as the ordinance for effecting the desired improvement in the site of the cathedral received the assent of the superintendent. Excavations will be made for the purpose of ascertaining the nature of the subsoil. Mr. Speechly took out with him the alternative plans for the construction of the interior of the nave in stone, and we are now in a position to state that the idea of the wooden columns and clerestory has been abandoned in favour of stone.——*The Tunnel.*—The progress of the tunnel works has been unprecedentedly rapid during the past month, the length accomplished being about 180 ft. Since the date of Mr. Dobson's report, the miners have struck a stream of water measuring no less than 4 in. in diameter, on the Lyttelton side.

The Crystal Palace Company.—The nineteenth ordinary general meeting of the proprietors of this company was held at the London Tavern last week. The directors stated in their report, that the result of the year's working shows a balance in favour of revenue of 52,550*l.* 9s. 4d. After payment of all preference charges and interest, there remains at the credit of the general revenue account the sum of 20,812*l.* 5s. 3d., available for division amongst the proprietors of ordinary capital. Out of this sum the directors recommend the payment of a dividend of 2 per cent. (2s. per share), which will leave a balance of 758*l.* 15s. 3d. to be carried forward. An increase has taken place in the number of visitors during the year over those of last year, of 173,972, making the whole number 1,661,083 as against 1,487,111. This is the largest number attained in any year since the opening of the Palace, except that of the recent International Exhibition. The report was adopted and the dividend agreed to.

Portable Engines: Saving of Fuel and Water.—The patent double expansive portable and fixed steam-engine at work on the New Foreign-Office buildings, and of which we gave a description as employed at the State Paper Office, is again brought under our notice. The engine, which has been at work for the last fourteen months at the Foreign-Office, we are told, has driven eight stone-saw frames for fourteen hours a day upon 4 cwt. of common (Cannel coal) gas coke, costing at the gasworks 9d. per cwt. These results are worth recording, and show what may be done by expansive working, especially where the cylinders are steam-jacketed. Mr. D. K. Clark, C.E., superintendent of the Western Annexe, Exhibition, 1862, and one of the judges of the Royal Agricultural Society, and consulting engineer to the North Lincolnshire Agricultural Society, says of this engine:—"I have examined and tested an 8-horse power portable engine, on Allen's system, which is now, and has been some months, at work in the contractor's yard at the New Foreign-Office buildings. The engine worked well and steadily. The gearing is simple and permanent, and it cannot be tampered with like ordinary expansion gear with special valves. The pressure of the steam, even when worked with a greater degree of expansion, is exerted with a near approach to uniformity. If the fire-boxes be properly lagged, and the cylinder covers steam-jacketed, as well as the outside of the cylinder (both being simple applications), such engines will be found capable of working with a consumption not exceeding 4 lb. of Welsh coal per dynametrical horse power."

A LADDER.—A ladder has been invented and patented by Mr. Henry Druce, solicitor, of Oxford. It is constructed on the telescopic principle, and consists of a series of pieces or lengths, each of which forms a single and distinct ladder of itself. These ladders are made to slide one into another, so that the ladder can be extended to any length according to the convenience of the person using it, and the number of pieces of which it is composed. When closed up it is about 6 ft. long.

BATH SCHOOL OF ART.—The distribution of prizes to the pupils who passed the examinations held some time since in connexion with this school has taken place at the Guildhall. The mayor, who presided, said, it might not be generally known that the range of this school of art was very extensive indeed. He found that upwards of 2,000 children were taught by it in the various schools of the city. He was informed the mode of instruction was, that a scholar from the Bath School of Art was sent to each school, that scholar being in his turn instructed by the master himself. The total number receiving instruction in drawing, in or through the agency of the school, during 1863, has been 2,187, showing a total increase of 1,274 since last year. The total amount of fees has been 150*l.* 1s. showing a decrease of 17*l.* 17s. 6d. from the sum received last year.

THE PNEUMATIC LOOM.—Mr. Thomas Page, C.E., reports on a new system of weaving by compressed air in the pneumatic loom. The improvement will affect the working of nearly 500,000 power-looms, the labour of more than 775,000 persons, and the manufacture of about 1,200,000,000 lb. of cotton alone. The principle upon which the new loom acts is that of discharging a jet of compressed air from the valves of the shuttle-box, upon the end of the shuttle, at each pick or stroke, and thus substituting for the imperfect motion of the "picker" the pneumatic principle, simply applied. The working velocities will be in the proportion of 240 strokes by the new machine per minute, to 180 strokes of the old in the same time. This improvement applied to the whole of the power-looms in the United Kingdom would represent a total increase of 1,400,000,000 yards over the produce of the same number of existing machines.

GAS.—The Barnet gas consumers are resolved to have a reduction in the price of their gas to 5s., while the gas directors hesitate to give more than one-half the required reduction.——The Maidstone Gas Company have agreed to lower their price to 4s.——At Canterbury, a reduction from 5s. 6d. to 5s. is announced.——The Marlborough Gas Company have reduced the price of their gas 2s. 6d. per 1,000 feet. To consumers of 30,000 ft. the cost will now be 6s. 6d. per 1,000; under that quantity, 7s. 6d.; whilst to those who use 5,000 feet and under, the cost will be equalized by a charge of 1s. per quarter for the use of the meter.——Lower Gornal is now being lighted with gas.——A gas company has been formed at Epworth, and a site procured for works.——There is a movement at Leamington for a reduction of the price of gas from 5s. 5d.

MONUMENTAL.—A carved altar-tomb has been erected in the Presbytery of Lincoln Cathedral, immediately under the great east window, in memory of Mr. W. Hilton, R.A., and Mr. P. de Wint. The tomb is composed principally of Caen stone, the top being of polished marble, and the panel of white alabaster. The sculpture on the panels is taken from the works of the deceased, the first, reading from the left, representing Mary anointing the Feet of our Lord, from a large painting by Hilton, in St. Philip's Church, College-hill, London; the second, the Crucifixion; and the third, the Raising of Lazarus, from a painting by Hilton, in Newark Church. The end panel is taken from a drawing by De Wint, representing the west front of the cathedral from the top of the Castle-hill. On the top of the tomb is the inscription.——The Queen has given directions for a tablet to be placed in Clewer Church, to the memory of a faithful servant of the name of Glover. Her Majesty inspected the grave last week.——A memorial of the late Mr. Jonas Webb, in the form of bronze, is to be erected in Cambridge. The sum to be expended will not exceed 1,000*l.*, including the pedestal and every expense attending the same. The committee recommend the work to be entrusted to Baron Marochetti, if he will undertake the execution of it upon these terms.

ACCIDENTS.—As some men, engaged in the erection of a large brewery in Great Charles-street, Birmingham, were removing the supports of newly-completed vaults, a large mass of the brickwork gave way, burying several men beneath the ruins. Five of the more seriously injured were taken to an hospital, but it is said that none are likely to lose their lives by the accident.——At Coppice-street, Tipton, two men have been killed, by the falling of four houses, from what cause the inquest jury could not discover.

NORMAN AND SAXON RELICS AT BRADFORD.—During the reparation of Bradford Church, two fragments of carved stone, of Saxon (?) workmanship, were recently discovered, built in the lintel over the door of the south porch. The patterns are somewhat similar to those found in illuminated Irish and Welsh MSS. of a very early date. In the same porch was also found the upper portion of a recumbent stone figure of a lady, extending to the waist. Its date is believed to be about the close of the reign of Edward I. The colouring remains, and shows that the figure had been painted to imitate life. The eyes are blue; the body of the dress red; with sleeves of green hue. The figure reclines on a slab, painted green, and beneath the lady's head are two pillows, the lower painted in red diapered squares, and the upper in greenish blue, diapered. In another wall the arm of a churchyard cross has been brought to light, a curious Norman tomb-stone, displaying zigzag ornamentation, and sundry pieces of Norman work painted and gilt.

THE ATLANTIC TELEGRAPH.—The new Atlantic cable is being coiled from the company's premises (late Glass, Elliott, & Co.'s), Morden Wharf, Greenwich, on board the *Amethyst* Admiralty vessel, for conveyance to the *Great Eastern* at Sheerness. The necessity of keeping the cable constantly under water has led to the erection of eight enormous tanks on the company's premises, into which the cable is daily being coiled from eight corresponding closing machines, at the rate of 80 miles per week. From these tanks it is being transferred to tanks on board the *Amethyst*, which will hold 110 miles. Another vessel, named the *Iris*, also lent by the Admiralty, has been altered and fitted with tanks which will hold 153 miles. The *Great Eastern* has been fitted with five large tanks, and it will occupy three days to transfer the cable from the *Amethyst* to that vessel. The cable will be laid across the Atlantic by Messrs. Canning & Clifford in June next. The *Great Eastern* will have 500 hands on board, with a weight of 15,000 tons, including 4,500 tons of cable and 8,000 tons of coal.

EFFECTS OF TIME ON WROUGHT-IRON GIRDERS.—In an article treating of this subject, the *Engineer* says,—A glance at the printed proceedings of our engineering institutions will show that very much has been argued for and against the supposed deterioration, through vibration, of axles and other forms of wrought iron. It is certain, however, that no instance can be adduced of any deterioration of wrought iron by strains of an amount within the limit of elasticity. Apart from this question, it has been generally noticed in England that the fractures of axles begin with a crack at the shoulder or other weak part, and do not take place all at once. Numerous observations, extending over a number of years, and made with much more precision, conducted in France by two Government engineers, have proved the same thing. The axles were, indeed, deteriorated, not by an essential metamorphosis of their internal structure, but simply by a brittleness induced by the repeated bending to and fro, just as a tough bit of wire can be thus deteriorated, and at last snapped in two. It is generally acknowledged that strains, within the limits of elasticity, do not injure structures; and upon this supposition all the principal ones have been proportioned. It is known, and well manifest, that strains in excess of the limits of elasticity must at last cause destruction: what seems to be wanted is more knowledge of the effect of vibration on dead weight. There is one action on wrought-iron work which is undoubtedly accelerated by time, and this is the effect of corrosion. As long as we have not found out any means to stop the chemical action of moisture on wrought-iron, spreading literally like a cancer, further and further, and eating deeper and deeper every year, it is certain that chemical, or rather galvanic, action, tends to make the endurance of our wrought-iron bridges a mere matter of time.

THE UTILIZATION OF SEWAGE.—A number of noblemen, including the Dukes of Sutherland, Marlborough, Wellington, Rutland, and Manchester, have appended their names to the following resolution:—"That the pollution of rivers, by house sewage and by other matters, is a serious evil, affecting most injuriously the health and wealth of the population. We, the undersigned, are therefore anxious that the sewage of towns should, generally, so far as possible, be utilized on our respective estates." The Earl of Clarendon and Lord Ebury signed the resolution in the following form—this was the form in which it was first agreed to, but it was inadvertently altered in being copied:—"That the pollution of rivers by house sewage and by other matters is a serious evil, affecting most injuriously the health and wealth of the population. We, the undersigned, are therefore anxious that the sewage of towns should be utilized on our respective estates, and generally so far as possible."

TENDERS.

For building tanks, engine-house, &c., at the Lunatic Asylum, Hanwell, Middlesex:—

Nias	£490 10 0
Gibson	400 0 0
Hanson	397 0 0
Nye (accepted)	325 0 0

For Trinity Church, Sydenham. Quantities supplied:—

Piper & Wheeler	£12,658 0 0
Jackson & Shaw	11,963 0 0
Longmire & Burge	10,842 0 0
Carter & Sons (Hornsey)	10,836 0 0
Carter & Sons (Westminster)	10,800 0 0
Trollope	10,693 0 0
Myers	10,643 0 0
Manley & Rogers	10,417 0 0

For the restoration of the parish church at Church Langton, in the county of Leicester. Messrs. Goddard & Son, architects:—

Timms	£3,751 2 6
Law	3,689 0 0
Herbert	3,581 0 0
Johnson	3,453 0 0
Osbourne, Brothers	3,264 0 0
Booker	3,197 0 0
Thompson	3,162 0 0
Ward	3,137 0 0
Stanyon	3,044 0 0
Loveday	3,044 0 0

For additions to Spital-hill Works, Sheffield, for Messrs Lockwood, Brothers. Messrs. Hadfield & Son, architects, Sheffield. Quantities supplied:—

Clarbrough	£1,650 0 0
Illingworth	1,530 0 0
Wade	1,400 0 0
Rodley	1,399 0 0
Slack & Grayson	1,385 0 0
Larder	1,380 0 0*
Carr	1,340 0 0†

* And to be completed in four months.
† And to be completed in three months. Accepted.

For new shop and warehouse for Messrs. T. B. & W Cocksayne, Sheffield. Messrs. Flockton & Abbott, architects. The contractor to take all the old materials:—

Wilson	£9,600 0 0
Messrs. Craven	9,450 0 0
Neill	9,235 0 0
Gomersall (accepted)	9,000 0 0
Robertson	8,708 0 0

For four residences in the Hurley-road, Lower Kennington Lane, for Mr. Mills:—

Cranch	£1,360 0 0
Neal	1,305 0 0
Flexman	1,240 0 0
Rugg & Co.	1,180 0 0
Packer & Hopman	1,125 0 0
George	1,097 0 0
Stone & Pearson	1,080 0 0
Soper	1,080 0 0
Nightingale	1,060 0 0
Peskett	900 0 0
West & Moore	882 0 0
Gorry (accepted)	864 0 0

For additions and alterations to Moor Court, Gloucestershire. Elmslie, Franey, & Haddon, architects:—

Wood & Son (accepted)	£6,000 0 0

For Girls' School, Colwall, Herefordshire. Elmslie, Franey, & Haddon, architects:—

Davis (accepted)	£538 0 0

TO CORRESPONDENTS.

Answers, &c.—We have to thank several correspondents for obliging and flattering communications on the subject of services in this case, tending to oppose, to organise a subscription. It would not become us, however, to print them.

ADVERTISEMENTS.

PEOPLE'S EDITION OF MACAULAY'S MISCELLANEOUS WRITINGS.

On January 6, 1865, will be published, Part I. in crown 8vo. price 1s.

PEOPLE'S EDITION of LORD MACAULAY'S MISCELLANEOUS WRITINGS. Uniform with the People's Edition of Lord MACAULAY'S ESSAYS and HISTORY of ENGLAND. To be published Monthly, and completed in Four Parts, price One Shilling each.

London: LONGMAN, GREEN, & CO. Paternoster-row.

FOR CHRISTMAS AND NEW YEAR'S GIFTS.

DR. FLETCHER'S GUIDE to FAMILY DEVOTION. A sale of 100,000 copies indexed the Author to improve and enlarge the work. It comprises 730 Services, each including a Hymn, Prayer, Portion of Scripture, and appropriate Reflections, being one for the Morning and Evening of every day in the year. Also an Appendix, containing Prayers for Particular Occasions. One vol. royal 4to 26 Engravings, 28s. cloth gilt.

Also in calf and morocco bindings.

London: JAMES S. VIRTUE, City-road and Ivy-lane.

Just published, in royal 32mo. roan, price 8s.

A HANDBOOK for ARCHITECTURAL SURVEYORS, and Others engaged in BUILDING. By JOHN THOMAS HURST, C.E.

CONTENTS:

Formulæ useful in designing Builders' Work.
Tables of the Weights of Materials used in Building.
Memoranda connected with Builders' Work.
Architectural Mensuration.
Constants of Labour.
Valuation of Property.
Summary of the Practice in Disputations.
Scale of Professional Charges for Architects and Surveyors, with various useful Tables and Memoranda.

London: E. & F. N. SPON,
16, Bucklersbury.

PROPOSED RAILWAYS in LONDON and TEN MILES ROUND. This day is published, a MAP of PROPOSED RAILWAYS and MISCELLANEOUS IMPROVEMENTS, deposited at the Private Bill Office, November 30, 1864, for Session 1865; also the Railways in Operation, Constructing, and Sanctioned. Price, in Sheet, 2s. 6d.; Mounted, in Case, 4s. 6d.

London: EDWARD STANFORD, 6, Charing-cross, S.W.;
and all Booksellers.

Just published, in demy 8vo. with Illustrations, price 2s. 6d.

A TREATISE on SMOKY CHIMNEYS, THEIR CURE and PREVENTION.

By FREDERICK EDWARDS, Jun. Author of "The Economical Use of Fuel and the Prevention of Smoke in Domestic Fire places."

London: ROBERT HARDWICKE, 192, Piccadilly.

SPECIMENS of EARLY FRENCH ARCHITECTURE, selected chiefly from the Churches of the Ile de France, and illustrated in geometrical drawings and perspective views.

By ROBERT J. JOHNSON, M.R.I.B.A.

Only fifteen copies remain on hand. Price £1 1s. each, half-bound morocco, or 3l. 12s. in sheets. The drawings are all effaced from the stones.

Newcastle-upon-Tyne: W. KAYE, Blackett-street.

On January 5th will be published, in 2 vols. imperial 8vo.

TUSCAN SCULPTORS: their Lives, Works, and Times. With Illustrations from original Drawings and Photographs.

By CHARLES C. PERKINS.

London: LONGMAN, GREEN, & CO. Paternoster-row.

WEALE'S ENGINEER'S POCKET BOOK, 1865

Now ready, in roan tuck, with tables, price 4s. (postage 4d.)

THE ENGINEER'S ARCHITECTS, and CONTRACTOR'S POCKET-BOOK (LOCKWOOD'S, formerly WEALE'S, for 18—. Carefully revised, with many additions and several new plates. Besides the usual text matter of useful information, rules, formulæ, etc. etc. will be found a Survey of Estate and Data, a General Calendar, a Gas engineer's Calculator and Memoranda, Obituary of Eminent Engineers, etc. 1863-4; List of Members of the Institute of Civil Engineers, and of the Royal Institute of British Architects; Tables for the Reciprocal Conversion of Imperial Weights and Measures into the Decimal or Metric system, etc. etc.

LOCKWOOD & CO. 7, Stationers' Hall-court, E.C.

WEALE'S BUILDER'S PRICE BOOK, 1865

Now ready, thirty-seventh issue in cloth, price 4s. (postage 4d.)

THE BUILDER'S and CONTRACTOR'S PRICE BOOK (LOCKWOOD'S, formerly WEALE'S) for 1865, revised by G. R. BURNELL, Esq. C.E. This book is the universally recognized arbitrator in the settlement of disputed accounts. Not being limited from year to year like plates year after year, as in the case with other books of the kind, prices are not perpetuated, and the copyright is taken in every respect to introduce current prices and other desirable improvements. The present issue has been thoroughly revised. Every line and figure has been carefully considered and compared with existing practice.

LOCKWOOD & CO. 7, Stationers' Hall-court, E.C.

MR. MARDON, ARCHITECTURAL DRAUGHTSMAN and COLOURIST. Perspectives, Competition, and other DRAWINGS prepared.—Address, Belfort Chambers, Southampton-street, Strand, W.C.

ENGINEERING, SURVEYING, ARCHI-TECTURE, &c. PRACTICAL INSTRUCTION given in Civil Engineering, Surveying, Levelling, Plan Drawing, Measuring, Estimating, &c. in a Course of Office and Field Work, on Modern Principles, including the Use of the Instruments, &c.—For Terms, &c. apply at the Offices of Messrs. HYDE, SMITH, & LEWIS, Civil Engineers, Surveyors, Architects, &c. 34, Guildford-street, Russell-square. N.B. DAY and EVENING Instruction given in Architectural Drawing, Colouring, Taking out Quantities, &c. &c.

ARCHITECTURAL DRAWINGS by W. BURGES.—This work will consist of seventy-five folio sheets of details of Mediæval Art and Architecture, accompanied by twenty-five pages of letterpress to illustrate the drawings, the originals of which were measured and plotted on the 1/16th, 1/8th, and 1/4 in. Scale. No further copies will be issued than those subscribed for. None will go into the trade, and the plates will be defaced after publication. The work will be issued in about six months from the present time. Subscribers' names will be received by Mr. W. BURGES, 15, Buckingham-street, Strand, W.C. by whom the work will be published, price 3l. 10s. bound; 3l. 3s. unbound. As 150 subscribers will be required to authorize the issue of the work, it is desirable that the names should be forwarded before the 1st of FEBRUARY, 1865, at the latest.

ENGINEERS, SURVEYORS, and ARCHITECTS' OFFICE WORK.—ROBERT J. COOK & CO 2, Cannon-row, have a staff of thoroughly qualified Draughtsmen, with whom they are enabled to execute a large amount of tracing and general office work in a very short time.—ROBERT J. COOK & CO Surveyors, Draughtsmen, and Lithographers, 2, Cannon-row, Westminster.

COMPETITION and ARCHITECTURAL DRAWINGS PREPARED, from rough sketches or otherwise Tracing, Tinting, and Drawings Copied, &c.—Apply to G. 43, Bedford-row, W.C.

A PUPIL WANTED in an Engineering and Surveying Office. He must write a good hand, print, and draw a little. No premium required, or salary given.—Apply to Messrs. HYDE & CO. 34, Guildford-street, Russell-square.

ENGINEER'S DRAUGHTSMAN.—WANTED, a first-class DRAUGHTSMAN, who thoroughly understands taking out strains. Must be a good designer of bridge and roof work, and have good references.—Apply by letter, stating salary, addressed to W. B. London-yard, Isle of Dogs, Poplar.

TO BUILDERS' FOREMEN.

WANTED, an experienced Man, who thoroughly knows the business in all its branches, and has been accustomed to take the entire superintendence of building of some magnitude.—Direct to J. W. Office of "The Builder."

WANTED, a clever ARCHITECTURAL DRAUGHTSMAN, in a first-class builder's establishment, at the west-end. He must be well versed in detail and construction, able to work from rough sketches and instructions, take off quantities, estimate and measure up work, and prepare specifications.—Apply, by letter, prepaid, to W. C. 9, Robert-terrace, Chelsea, S.W.

WANTED, a BUILDER'S CLERK, to take the MANAGEMENT of a SET of BOOKS in Office. Must have filled a similar situation, and can produce satisfactory references. Apply, stating wages required, and when he would be able to enter into situation, if engaged, to J. L. D. Post-office, Brighton.

TO SURVEYORS.

WANTED, at the end of January next, a few SURVEYORS, for SURVEYING and GETTING UP PLANS for RAILWAY and WATER WORKS abroad.—Apply by letter to R.M. care of Messrs. Hy. Adams & Co. Newspaper and Advertising Agents, 9, Parliament-street, Whitehall, S.W.

WANTED, a competent ASSISTANT, able to prepare finished and detailed drawings.—Apply by letter, stating terms, &c. to Mr. PATTERSON, Blackburn, Lancashire.

WANTED, a thoroughly competent Railway Contractor's ENGINEER, who perfectly understands his duties and has a general knowledge of masonry and railway works.—Apply to H. 28, Bury-street, St. James's.

WANTED, for a permanency, an experienced MAN as GENERAL FOREMAN, a Carpenter and Joiner by trade. Will be required to take charge and use the tools when required. Wages liberal if satisfactory.—Address, JOHN A. MUNDY, Builder, &c. North-street, Backchurch-lane, Commercial-road, E.

TO CLERKS OF WORKS.

WANTED, immediately, a competent CLERK of WORKS, for a Gothic building.—Apply, with testimonials, and stating salary required, to Mr. W. CROSSLAND, New Corn Exchange, Leeds.

TO ARCHITECTS' ASSISTANTS.

WANTED, an ASSISTANT, competent to TAKE CHARGE of a BRANCH OFFICE in the absence of the Principal. References as to character and ability will be required.—Full particulars, stating terms, &c. to be addressed to Mr JOHN JOHNS, Architect, Dunstable.

FOREIGN TIMBER TRADE.

WANTED, a thoroughly experienced and competent FOREMAN.—Address, Box 407, Post-office, Bristol.

WANTED, an experienced PLUMBER. One used to gas fitting preferred. A permanent situation and liberal wages to a good workman.—Apply, stating age, wages, and reference, to JOHN LYCROFT, Publican, &c. Mansfield.—None but a good plumber, with good character, need apply.

TO BUILDERS AND OTHERS.

WANTED, by a GENERAL FOREMAN, a RE ENGAGEMENT to TAKE CHARGE of a JOB. Good reference can be given.—Address, C. H. 21, John street, Albany road, Old Kent road.

WANTED, EMPLOYMENT, by a first-class GRAINER and MARBLER, by Piecework.—Address, A. P. 53, Charrington street, Oakley-square, N.W.

TO BUILDERS, PLUMBERS, &c.

WANTED, by a Young Man, a permanent SITUATION, as PLUMBER or THREE-BRANCH HAND, in or near London. Is a thoroughly good workman, and accustomed to the management of work and men in all the branches. First-class references. Wages moderate.—Address, W. W. Office of "The Builder."

WANTED, a SITUATION, as ASSISTANT ENGINEER, or to Take Charge of a moderate Job. Age 30. Good leveller and fieldsman, for draughtsman, and expert in details, quantities, measuring, and superintending work. Well up in water and sewerage work.—Address, "H.E." Office of "The Builder."

TO BUILDERS, CONTRACTORS, AND ESTATE AGENTS.

WANTED, an ENGAGEMENT, by an energetic experienced Man, aged 27, a Joiner and Carpenter by trade; or would be very efficient in alterations and private collection of rents on an estate, or the like. Salary not so much an object. Must be in Town.—Address, DAKINS, 1, Carlton-road South, Mile-end, E.

WANTED, a SITUATION, by a competent Person, as MANAGING FOREMAN, or as CLERK of WORKS. The Advertiser has been for many years accustomed to large works, and is now finishing up Lord Petre's.—Testimonials will be given from present employer, by applying, first, to H. W. 7, Whitehall-street, Paul-street, Finsbury.

TO ARCHITECTS.

A GENTLEMAN, of Eight years' experience in the profession, and well up in both styles will be happy to correspond with an Architect in London or Manchester who may require an ASSISTANT at the commencement of the new year.—Address, ARCHITECT, care of Mr. Archibald, Stationer, Wine-office-arcade, Hull.

WANTED, by a Civil Engineer, a Young Man, who can trace, colour, and write well. He will have opportunities of learning surveying and levelling.—Address, stating age, salary expected, and late employers, to A. R. B. Vacher & Son's, Parliament-street, Westminster.

TO LAND SURVEYORS COMMENCING A LARGE SURVEY.

THE Advertiser would GIVE his SERVICES for EXPERIENCE on a large Survey of 500 acres or above.—Address, O. Post-office, Topsham, Devon.

TO HOUSE PAINTERS, DECORATORS, BUILDERS, &c

THE Advertiser, a middle-aged single Man, requires a SITUATION as Working FOREMAN of PAINTERS, or to Take Charge of Work. Fully qualified in the charge of work and men. Or in part partnership in an established business where 150*l.* to 150*l.* capital would be sufficient.—Address, W. M. 134, Hampstead-road, N.W.

TO ARCHITECTS, SURVEYORS, &c.

THE Advertiser is desirous of a RE-ENGAGEMENT (a permanency preferred). Understands levelling and surveying (Parliamentary or otherwise). Is conversant with construction, taking off quantities, &c. and is a careful draughtsman, and neat colourist. Good references.—Address, KENT, 11, Lacey-terrace, Penton-place, Kennington, S.

TO ARCHITECTS AND SURVEYORS.

REQUIRED, a PRACTICAL MAN, for an Establishment in the Country. A married man preferred. A good house can be had for about 8*l.*—Apply, personally, to Prof. HEVER, 46, Regent-street, W.

TO ENGINEERS, SURVEYORS, &c.

A GENTLEMAN, 23 years of age, who has had considerable experience in the different branches of the profession, is open to an ENGAGEMENT. Can speak French. Has no objection to go abroad.—Address, J. F. MITCHELL, No. 121, Curtain-road, E.C.

A GENTLEMAN, who desires improvement rather than salary, is anxious to enter into an ENGAGEMENT with an Architect of good Ecclesiastical practice. Is a churchman.—Address, W. R. 102, Upgate, Louth, Lincolnshire.

FRENCH POLISHING.
To BUILDERS and the TRADE in GENERAL.
W. HORWOOD,
131, CANNON STREET ROAD, E.
Estimates if required.

PRIZE MEDAL, 1862.

HAMILTON & CO.
No. 10, GREEK-STREET, SOHO-SQUARE, LONDON, W.
Sole Manufacturers of
C. A. WATKINS'S PATENT WIRE-BOUND ROUND and OVAL
PAINTING BRUSHES.
Distemper Brushes, Sash Tools, Stippling Brushes, Gilders' and Grainers' Tools.

These goods are made of the best materials and workmanship, and have obtained a high reputation among the chief decorators in the kingdom. Varnish and Colour Manufacturers, Oilmen, Merchants, &c. are supplied on the lowest terms. Price Lists forwarded on application.

IMPORTANT to BUILDERS and PAINTERS. White Lead (WARRANTED GENUINE) 23s. per cwt.
Linseed Oil, 3s. 3d. per Gallon; Boiled Oil, 3s. 8d. per Gallon.
Turpentine, 6s. 6d. per Gallon.
Oak Varnish, 7s. per Gallon.
Fine Pale Oak Varnish, 8s. per Gallon.
For cash, at EDWARD PRICE'S Colour and Varnish Warehouse, 30, Upper Eburv-street, and 45, Coleshill-street, Pimlico, S.W.
Every article for the Trade at the lowest price.

KENT'S PAINTING BRUSHES

CEMENT MANUFACTURERS,

STROOD DOCKS, on the East Medway, KENT.

MESSRS. LARK & WHITE,

Late Lark, Fletcher, & Co. are prepared to supply their Cements, of the best quality and on the most advantageous terms, either for shipping, brickwork, or for tabic works, or elsewhere, and for home and foreign trade, either direct from the Manufactory, or at the WHITE LION WHARF, BANKSIDE, LONDON.

N.B. Shipping particulars for the Export trade treated with on the most advantageous terms. Stocks of sand always landed at, and alongside, HYDRAULIC LIME MANUFACTURERS OF THE BEST QUALITY.

HYDRAULIC LIME and ROMAN

CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Grosvenor Basin, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water, to any part of the kingdom, either in lump (stone), or ground, and in barrels and bags. The Limestone can be had in full cargoes, also their cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to L. & W. AARON, Agents, 66, South Johnstreet, Liverpool

ROMAN, PORTLAND, PARIAN, and

KEENE'S CEMENTS.

JAMES R. BLASHFIELD

(Late Wyatt, Parker, & Co.),

LITTLE CASTERTON FREESTONE.
Also for Corridors, &c. to
OCTAVIUS N. SIMPSON, STAMFORD,
The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as cellar work it is not necessary to place it bed wise. It works freely with a tooth saw, and is wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE is used largely by London Builders.

ABRIDGED PROSPECTUS

This Company is formed for the purpose of erecting in the City of London a Public Auction Mart for the sale of land estates and other property, and for such other business as may be found of the late Auction Mart recently situate in Bartholomew lane, City, having the use of the offices, plans, and the unexpired term of the lease and goodwill of the present business.

The Directors have secured on favourable terms an excellent freehold site in Token house yard, two minutes from the General Post Office having a frontage of upwards of 100 feet. The site and area is adapted to the requirements of the undertaking, not only from its central position, but from the great advantage it possesses in having three entrances, rendering it necessary in case of the late Auction Mart recently situate in Bartholomew lane, City, having the use of the offices, plans, and the unexpired term of the lease and goodwill of the present business.

The Directors have secured on favourable terms an excellent freehold site in Token house yard, two minutes from the General Post Office having a frontage of upwards of 100 feet. The site and area is adapted to the requirements of the undertaking, not only from its central position, but from the great advantage it possesses in having three entrances, rendering it necessary in case of fire to have separate exits.

The Directors propose to erect on the site of the existing houses, a handsome and substantial building, containing on the ground and first floors a large Sale Room; and further particulars, on the second and third floors, which are to be approached by a separate entrance, number of rooms suitable for offices. The basement will contain suitable refreshment accommodation, and additional cellarage or office as the case may be.

The revenue of the Company will consist, First, of rents to be received for the Sale Rooms, the Rooms, Cellars, &c. from which sources the Directors confidently expect a most satisfactory Revenue will be realized.

The undertaking originates with the Directors. There will be no "promotion money" paid to any one either directly or indirectly, and the preliminary expenses will be confined to such as are actually necessary to be incurred.

Prospectuses and Forms of Application for Shares may be had of the Solicitors, or of the Secretary, at the Temporary Offices, 62, Old Broad-street, E.C.

THE AUCTION MART COMPANY (Limited).—Notice is hereby given, that the SHARE LIST of this Company will be CLOSED on WEDNESDAY, the 11th of JANUARY, 1865, for London, and on THURSDAY following, 12th for the Country.—By order, H. J. DOWDAN, Sec. pro tem.

Temporary Office, 62, Old Broad-street, E.C.

PATENT CONCRETE STONE COMPANY, Limited.—The Offices of the Company will be REMOVED on the 31st instant, to more commodious Premises, at No 2, QUEEN STREET PLACE, SOUTHWARK BRIDGE, E.C.

THOMAS PIPER, Secretary.

31, Parliament street, S.W.

Joseph Samuel Lescher, esq.
Stephen Gladstone Lovell.

ASSISTANT SECRETARY—John J. Broomfield.

Insurances against Loss by Fire are effected by the Phœnix Company upon every description of Property, in every part of the world, on the most favourable terms.

The promptitude and liberality with which its engagements are always met, by this Company, are well known; and the importance of its relations with the public may be estimated from the fact that among its establishment it has paid more than Eight Millions and a Half Sterling in discharge of Claims for Losses by Fire.

Insurances with this Company expiring at Christmas must be renewed within fifteen days thereafter, or they will become void.

Receipts of former years may be presented at the Counter, Lombard-street and Charing-cross, and with the respective Agents throughout the United Kingdom.

THE NATIONAL BOILER INSURANCE COMPANY (Limited).

CHIEF OFFICE—145, CHEAPSIDE, LONDON.

BRANCH OFFICE—22, ST. ANN'S SQUARE, MANCHESTER.

Tables of Rates of Insuring Stationary and Marine Steam Boilers can be had on application at the Offices of the Company.

A reduction of 10 per cent. will be made off all Premiums in cases where the Company's Patent Flushing Safety is used.

By order of the Board,
J. W. DANIELL, Secretary

CONTRACT for SEWER TRENCHES.—Notice is hereby given, that the Croydon Local Board of Health are prepared to receive TENDERS from persons desirous of CONTRACTING with them for the EXCAVATION and RE-FILLING of 7,000 lineal yards of TRENCHES for SEWERS, in accordance with the specification prepared by Mr. BALDWIN LATHAM, C.E. their Engineer. The specification may be seen at the Engineer's Offices, in the Town Hall, Croydon, on or after this date. Sealed Tenders, endorsed "Tender for Sewer Trenches," are to be delivered at the Offices of the Local Board, in the Town Hall, Croydon, on or before FOUR o'clock in the afternoon of TUESDAY, the 3rd day of JANUARY, 1865. The Local Board do not bind themselves to accept the lowest or any Tender.

HENRY RICHARDS, Clerk to the Board.

Town Hall, Croydon, December 14, 1864.

PARISH of CHELSEA, in the County of MIDDLESEX.—GRAVEL, &c.—The Vestry of this Parish will meet at the Vestry Hall, King's-road, Chelsea, on TUESDAY, the 3rd day of JANUARY, 1865, at THREE o'clock in the afternoon precisely, to receive TENDERS from persons willing to Contract until the 29th day of September 1865, for the SUPPLY of the Best Clean, Sifted, Pit ROAD GRAVEL, SHINGLE, and 300 GRAVEL RUGGING, to be delivered upon the roads or footpaths, at Kensal New Town, Harrow road, and Kilburn lane, at such times and in such quantities as may be directed. The Vestry do not bind themselves to accept the lowest or any Tender. Sealed Tenders, signed by the proposed Contractor, with the names and description of two sufficient sureties for the performance of his contract, to be delivered to the Clerk, by or before TWELVE o'clock on TUESDAY, the said 3rd day of JANUARY. No Tender will be received or accepted unless made on one of the printed forms, to be obtained at my Office.—By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's road, Chelsea, December, 1864.

PARISH of CHELSEA, in the County of Middlesex—NEW MOUNT SORREL BROKEN GRANITE.—The Vestry of this Parish will meet at the Vestry Hall, King's road, on TUESDAY, the 3rd day of JANUARY, 1865, at THREE o'clock in the afternoon precisely, to receive TENDERS from persons willing to CONTRACT, until the 29th day of SEPTEMBER, 1865, for the supply of the best MOUNT SORREL BROKEN GRANITE, to be delivered on the Harrow and Kensal Roads, at such times and in such quantities as may be directed. The Vestry do not bind themselves to accept the lowest or any Tender. Sealed Tenders, signed by the proposed contractor, with the name and description of two sufficient sureties for the performance of his contract, to be delivered to the Clerk, by or before TWELVE o'clock on TUESDAY, the said 3rd day of JANUARY. No Tender will be received or accepted, unless made on one of the printed forms, to be obtained at my Office.—By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's road, Chelsea, December, 1864.

TO DUSTMEN, BRICKMAKERS, and SCAVENGERS.—The Crown Estate Paving Commissioners hereby give notice that they are ready to receive TENDERS from persons willing to enter into a CONTRACT for the REMOVAL of DUST, DIRT, ASHES, and CINDERS, from the Houses within the districts under their jurisdiction in that respect, for a period of ONE YEAR, from the 25th day of JANUARY, 1865. Specifications and forms of Tender can be obtained upon application to me here. The Tenders, sealed and addressed to the Crown Estate Paving Commissioners, and endorsed "Tender for Dust," are to be delivered here at or before ONE o'clock on WEDNESDAY, the 4th day of JANUARY, 1865.

FRANCIS ADAMS, Clerk to the Commissioners.

1, Whitehall-place, 16th December, 1864.

TO BUILDERS.—TENDERS are required for BUILDING a NEW BAPTIST CHAPEL, in the Canterbury-road, Kilburn. The drawings and specification may be seen at 29, Canterbury-road, between the hours of TEN and TWO. Tenders to be sent in not later than JANUARY 14, 1865, addressed to Rev. T. HALL, 29, Canterbury road, Kilburn. The lowest or any Tender will not necessarily be accepted.

TO BUILDERS.—Persons willing to CONTRACT with the Justices of the County of Kent for the ERECTION of a Second-class POLICE STATION at North-fleet, may inspect plans and specifications at the Office of the County Surveyor, Maidstone, any day (excepting Sunday), between the hours of TEN and FIVE. The work is to be Tendered for agreeably to the form of Tender to be obtained at the County Surveyor's Office, where sealed Tenders, endorsed "Tender for North-fleet Police Station," are to be delivered by TEN o'clock in the forenoon on TUESDAY, the 10th day of JANUARY, 1865; and persons Tendering are to be in attendance at the Courts of Justice, Maidstone, at Half-past TWELVE o'clock on that day. Neither the lowest nor any other Tender will be accepted unless approved of in all particulars, and security will be required for the performance of the Contract.

H. A. WILDES, Clerk of the Peace.

Maidstone, December 23rd, 1864.

[For remainder of Contracts see next Page.

TO WELL-SINKERS, BORERS, and OTHERS.—The Directors of the Northampton Water-Works Company are prepared to receive TENDERS for DEEPENING and REPAIRING their present WELL at Northampton. The work will consist of taking down and re-building about 6 feet of the present well, 8 feet 6 inches diameter; providing and sinking about 60 feet of cast-iron cylinders, 8 feet diameter; deepening the well about 100 feet; steining the same with 18 inch brickwork in cement; and other works at Northampton. The Contractors must be prepared to satisfy the Engineer of their ability to execute the work by reference to other works of the same description and in quicker time, they have executed successfully. The plans, specifications, and Form of Tender, can be seen at the Offices of the Engineers, Messrs. EASTON, AMOS, & SONS, The Grove, Southwark, London, S.E.; also at the Water Company's Offices, 87, Newland, Northampton. Tenders (enclosed in a sealed envelope) endorsed "Tender for New Well," to be sent to the Secretary, 87, Newland, Northampton, on or before the 21st day of JANUARY, 1865. The Directors do not bind themselves to accept the lowest or any Tender.

TO BUILDERS and OTHERS.—TENDERS are required for TAKING DOWN and CLEARING AWAY a MANSION HOUSE, called Southorpe, near Stamford. Application for particulars to be made at my Office, on and after the 26th instant. Tenders to be delivered to me on MONDAY, JANUARY 9, 1865, by SIX o'clock, p.m.

EDWARD BROWNING, Architect, Stamford.

December 17, 1864.

OSWALDTWISTLE LOCAL BOARD, County of Lancaster.—WATER-WORKS CONTRACT.—The Local Board of the District of Oswaldtwistle are prepared to receive TENDERS for the CONSTRUCTION of TWO RESERVOIRS together with the necessary mains and other works, and for the supply of the said district with water. Plans and specification may be seen, and forms of Tender obtained, at my Office in Blackburn. Sealed Tenders, endorsed "Tender for Water-Works," will be received by me on or before the 21st day of JANUARY next. The Board do not bind themselves to accept the lowest or any Tender.

JOHN PICKOP, C.E., Frances street, Blackburn,
Oswaldtwistle, Dec. 22nd, 1864. Clerk to the said Board.

TYLDESLEY with SHAKERLEY LOCAL BOARD WATERWORKS.—T. Bonfounders, Brassfounders, Sluice Valve, and Hydrant Makers.—The Local Board for the District of Tyldesley with Shakerley, in the County Palatine of Lancaster do hereby give notice, that they are prepared to receive TENDERS from parties willing to undertake either of the following Contracts:—CONTRACT No. 1.—For Supplying Cast-iron Water pipes and other Castings.

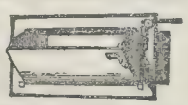
CONTRACT No. 2.—For Supplying Sluice Valves, Hydrants, and other Street Fittings.

Specifications and lists of quantities, with duplicate forms of Tender, may be had on application to Mr. THOMAS HESSLEGRAVE, the Surveyor of the Board, at his Office, in Tyldesley, on payment of 10s.; or on application to J. L. HUNTER, Esq. C.E. the Engineer of the Board, Wigan. Sealed Tenders, endorsed "Tender for Cast iron Pipes, &c." (as the case may be) must be forwarded to the Office of the Local Board, Tyldesley, near Manchester, on or before SATURDAY, the 14th day of JANUARY next. The Local Board do not bind themselves to accept the lowest or any Tender.

THOMAS HESSLEGRAVE, Surveyor.

Tyldesley, near Manchester, December 23, 1864.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of NEW BANKING PREMISES at Ramsgate for the London and County Bank, can inspect the plans and specification at my Offices, on and after THURSDAY, the 5th of JANUARY, 1865. The Tenders to be delivered before ELEVEN o'clock on MONDAY, the 16th of JANUARY, at the London and County Bank, 21, Lombard street, London. The lowest or any Tender will not necessarily be accepted.



FRED. J. FRANCELLON, Architect,
Pinners' Hall, Old Broad-street, London.

TO BUILDERS, or DECORATIVE PAINTERS, PLUMBERS, &c.—This genuine advertisement presents itself to any person wishing to EXTEND a BUSINESS, or enter into a Partnership. The Old-established Connexion, in the Business of Plumber, Painter, Decorator, &c. which has been carried on for seventy-six years, is principally resident gentry of the neighbourhood, within a short distance of London. This offer would be very advantageous to a London firm, or any other person with moderate capital.—Apply, by letter only, to Mr. J. HATFIELD, Builder, 21, Argyll street, Regent-street, W.

TO BE DISPOSED OF, with immediate possession, the STOCK, TOOLS, FIXTURES, GOODWILL, &c. of an old-established CARPENTER'S and JOINER'S BUSINESS, situate in a healthy town about thirty-five miles from London, and within less than half a mile of a railway station. The House and Premises can be had on lease at a moderate rent.—Address, M. A. F. Post-office, Baldock, Herts.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for the admission of Pure Air

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London.

19, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

THE ATTENTION OF ARCHITECTS AND SURVEYORS IS RESPECTFULLY SOLICITED TO
FLEXEN'S PATENT DRAUGHTLESS VENTILATOR,
Now used in various leading establishments in London. It supersedes all others now in use, giving free ventilation, and excluding all draught and dust; requires no alteration of sashes, and effectually producing a cool atmosphere in the most heated apartment. In establishments where a great amount of gas is consumed, or steam is generated, this Ventilator has fully carried out the required purpose. Office, 16, Skinner-street, Snow hill, E.C. where models can be seen, references given, and all information obtained.

PORTABLE ENGINES! PORTABLE ENGINES.—To Contractors, Miners, Colliery Owners, Agriculturists, &c.—Why give extraordinary prices for Portable Steam Engines when you can buy them fitted with all the recent improvements, and everything ready for getting steam up, neatly covered with hair felt, wood, and sheet iron, and mounted on wood wheels, equal to those by any other maker, and tested to 100 lb. per square inch? Several engines now ready for delivery.

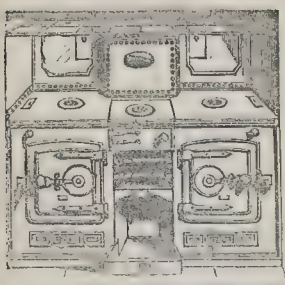
VULCANIZED INDIA-RUBBER WORKS, Goswell-mews, and 2nd, Goswell-road, London, E.C.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country

REDUCED PRICES OF
BRYAN DONKIN & CO.'S
IMPROVED GAS VALVES,
With Wrought-iron Pinions.
From 2 in. to 18 in. price 9s. 6d. to 12s. per in. diameter.
List of prices, with full dimensions of all sizes up to 36 in. to be had on application.
These Valves are all proved on both sides to 30 lb. on the square inch before leaving the works, and are always kept in stock. Valves made with outside racks to order.
Also Screw Water Valves, with gun metal faces.
BRYAN DONKIN & CO. ENGINEERS
Near Grange-road, Bermondsey.

IRON CASTINGS, WROUGHT and CAST-IRON GIRDERS, FLITCHES, and TANKS. Iron Roofing, and every description of Smith and Founders' work. Estimates given.
JAMES HAYWOOD, JUN.
PHŒNIX FOUNDRY AND ENGINEERING WORKS, DERBY



CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS;
SMITH'S PATENT WEATHER-TIGHT WATER BAR; and SMITH'S PATENT WEATHER TIGHT CASEMENT FASTENING for FRENCH WINDOWS:
The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

REDMUND'S PATENT HINGE MANUFACTORY and WAREHOUSE, Wellington Foundry, No. 68, Charles-street, City-road E.C. near the Canal Bridge.
BENJAMIN SLATER
(Late E. GOLLOP), SOLE PROPRIETOR.
A LARGE STOCK of the PATENT HINGES kept ready for delivery, consisting of Floor-springs, Gate-hinges, Rising-hinges, Rising Spring hinges, Not-rising Spring-hinges, Double-acting Spring-hinges Rising and Not-rising Door Back-springs, &c.
Price List and Drawings on application as above.

DAY and GAS LIGHT REFLECTOR MANUFACTURER.—THOMAS FOX, 90, Hatton Garden, E.C. and 88½, Charles-street, Hatton Garden, E.C. A large assortment of Silvered Glass Globes, Lamp Spires, &c. always on hand. All kinds of Bent Glass Silvered.
N.B.—The usual discount to BUILDERS and the TRADE.

E. E. ALLEN'S PATENT DOUBLE EXPANSIVE PORTABLE ENGINES, work at a cost of 3d. to 4d. per day, per horse power.—Contractors may cover the entire cost of engine by saving of fuel in Navvy's garden, besides saving half the wear and tear.—5, Parliament-street, Westminster, S.W.
See Engine at New Foreign Office.—"Results worth recording."—*Builder.*

THE BUILDERS' COMBINED MACHINE for Sawing, Mortising, Tenoning, Grooving, Rabbeting, and Boring, 16l. 10s.; Sawing, &c. 10l.; Mortising, 6l.—J. T. MARKALL, Patentee and Manufacturer, 1, Fieldgate-street Whitechapel-road, London, E.

FENDERS, STOVES, FIRE-IRONS, AND CHIMNEY-PIECES.

Buyers of the above are requested, before finally deciding, to visit

WILLIAM S. BURTON'S SHOW-ROOMS.

They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and General IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments, 3*l.* 15*s.* to 33*l.* 10*s.*; Bronzed Fenders, with standards, 7*s.* to 5*l.* 12*s.*; steel Fenders, 3*l.* 3*s.* to 11*l.*; ditto, with rich ormolu ornaments, from 3*l.* 3*s.* to 18*l.*; Chimney-pieces, from 1*l.* 8*s.* to 100*l.*; Fire-irons, from 2*s.* 3*d.* the set to 4*l.* 4*s.* The Burton and all other Patent Stoves with radiating hearth-plates.

WILLIAM S. BURTON, GENERAL FURNISHING IRONMONGER,

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES,

Sends a Catalogue, gratis, and post-paid. It contains upwards of 500 illustrations of his illimited stock of sterling Silver and Electro-Plate, Nickel Silver, and Britannia Metal Goods, dish-covers, hot-water dishes, stoves, fenders, marble chimney-pieces, kitchen ranges, lamps, gaseliers, tea trays, urns, and kettles, clocks, table cutlery, baths, toilet ware, turnery, iron and brass bedsteads, bedding, bedroom cabinet furniture, &c. with Lists of Prices and Plans of the Twenty large Show-rooms, at

39, OXFORD-STREET, W.; 1, 1A, 2, 3, and 4, NEWMAN-STREET; 4, 5, and 6, PERRY'S-PLACE, and 1, NEWMAN-YARD, LONDON.

VENTILATION.—OVERCROWDING.—Boyle's System of Natural Ventilation ensures a *more* healthy condition of atmosphere in overcrowded than is usually present in thinly-inhabited or empty places. The heat arising from the state of overcrowding is the motive power which works this system with infallible regularity and effect. The smaller, closer, hotter, and more overcrowded a place is, the easier and better can it be ventilated on this system. It is applicable to all places alike, Cottages, Mansions, Public Halls and Buildings, Churches, Hospitals, Factories, Work-rooms, Stables, Cow-houses, Conservatories, and even Mines and Ships. Let no one form a hasty conclusion from the seeming extravagance of this statement. It is a far wiser plan to examine first and conclude afterwards.

"*In one instance under our own eye Mr. Boyle has operated very successfully.*"—Article, "Air in the Corners," *Builder*, 15th October, 1864.

THOS. BOYLE, No. 23, Little St. Andrew-street, Upper St. Martin's-lane, London. Agents, Messrs. COMYN, CHING, & CO., at same address.

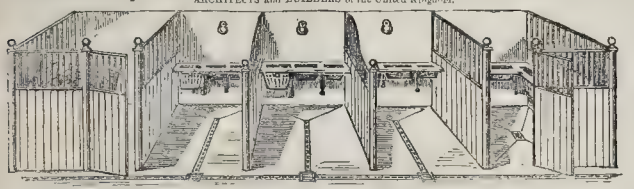
MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

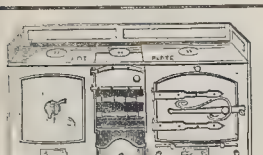


Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS.



These SUPERIOR CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

J. BARTON, having entered upon the extensive Premises, No. 370, Oxford-street, adjoining his Patent Stable Fitting Manufactory, begs to solicit attention to his large and well-selected STOCK of STALL and LOOSE-BOX FITTINGS, HARNESS ROOM REQUISITES, &c.; also to invite inspection of the newly-erected Practical Stable, now on view.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

NUT PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture

New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and Particulars sent on application.

GAS PIPE, Connexions, and Tools.

POST-OFFICE ORDERS PAYABLE AT SHOREDITCH.

WROUGHT IRON WINE BINS.

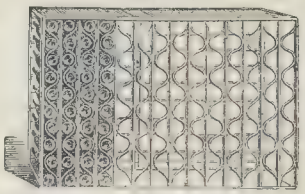
FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been sat isfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.



ALSO THEIR

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents of the Bin.

FARROW & JACKSON,

18, 17, and 16, GREAT TOWER STREET; and 1, HARP LANE, LONDON, E.C.

OF EVERY DESCRIPTION.

GLOVER, BROTHERS,

FOUNDERS, ENGINEERS, AND SMITHS,

No. 168, DRURY LANE, AND WORKS ALSO AT SPA ROAD, BERMONDSEY.

Wrought-Iron Girders, Flitches and Joists, Conservatories, Verandahs, Circular Staircases, Wrought-Iron Doors, Strong Rooms and Iron Houses, Iron Roofing, &c. &c.

A large Stock of Patterns for Building and other Purposes, for the use of which no extra charge is made. Estimates on application.

Wheelwrights and Contractors—1, Dean-street, Oxford-street, and Parker's-row, Bermondsey.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions, China, Glass, and Wood Furniture, of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilators, &c.; and the New Registered Venetian Ventilator, so much admired, 6s. 6d. each.

J. H. BOOBBYER (late STURCH & BOOBBYER), established nearly 100 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.

14, Stanhope-street, Newcastle-street, Strand, London, W.C.

SMOKY CHIMNEYS,

S. DEACON

Respectfully invites the attention of Architects, Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail.

The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage stamp, by

S. DEACON,

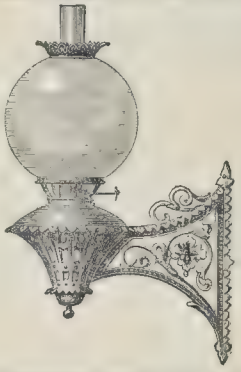
59, ALMA STREET, HOXTON, N.

MANUFACTORY:
HEMSWORTH STREET, SAINT JOHN'S ROAD, HOXTON, LONDON, N.

FRANCIS HAMMOND'S

VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient, simple, and effectual ventilation



The advantages obtained are these:—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR,
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume about 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 19 feet per hour.

Parties wishing to purchase may view the same, and adjust the terms with the Railway Office, Darlington, where any further particulars may be obtained.

Railway Office, Darlington, December 15th, 1864.

VIEILLE MONTAGNE COMPANY'S ROOFING ZINC.

SPECIAL APPOINTED AGENTS.
Messrs. CHARLES DEVAUX & CO. 62, King William-street, City.
Messrs. FREDERICK BRABY & CO. Fitzroy Works, Euston-road.

SPECIAL SUPERINTENDING ARCHITECTS.
JAMES EDMESTON, Esq. 5, Crown-court, Old Broad-street, City.
ROWLAND G. FISHER, Esq. 17, Great George-street, Westminster.

FOR ALL ROOFING ZINC, OR ANY PARTICULARS APPERTAINING THERETO, APPLY TO ANY OF THE ABOVE PARTIES.

THE VIEILLE MONTAGNE ZINC MINING COMPANY are now able to revert with satisfaction to the steps taken by them, about four years ago, to improve the mode of laying zinc roofs, and to prevent the use of thin gauges of sheet zinc, which are unfit for the purpose.

The Vieille Montagne Zinc possesses a well-known reputation for purity and excellence, superior to the production of any other mines, and that Company had acquired, by nearly half a century's practical experience, a complete and thorough knowledge of all the requirements that constitute a well-laid Zinc Roof, the most economical, because it is the most durable mode of covering.

This established fact has mainly contributed to the large sales by this Company on different markets, which amounted, in the year 1863, to the enormous quantity of 52,000 (fifty-two thousand) tons.

The Vieille Montagne Company will continue to send to England Sheet Zinc specially selected, and specially marked "Roofing Zinc." This Sheet Zinc is rolled from spelter of a superior quality, from the Company's own mines, which can be obtained by no other producer or manufacturer of Sheet Zinc, whatever assertions may be made to the contrary. Very many Architects and Engineers of the first position have now executed extensive works with this Zinc upon the proper method, which are perfectly satisfactory, and will prove durable and economical, requiring no repairs for very many years. It is only necessary, in confirmation and as examples, to refer to a few of these works, most of which are easily accessible to inspection, viz.—

Suburban Hotel Company, Hampstead	16	1,500 ,,

Besides a vast number of other Roofs in different parts of England and the Colonies (some of the latter of very considerable magnitude, such as the stations on the Madras Railway (400,000 feet), Cape Town and Wellington Railway (60,000 feet), the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet), &c. &c. absorbing from 1860 to the end of 1864 five thousand tons of Roofing Zinc, corresponding to about seven millions of superficial square feet). The Company strongly recommend that for roofs on boards, no gauge thinner than No. 14 be used, and for roofs without boards, No. 15 or 16; further, as the demand for thick sheets is increasing, they have resolved to prepare also, and stamp, specially for roofing, Nos. 17 and 18, principally for gutters; and they will, through their superintending Architects, supply, gratis, steel-cut ganges notched for roofing numbers only, by which the proper thickness of the sheets may be readily tested.

Plans, Estimates, and all information are to be obtained on application to either of the Company's superintending architects named above, who are especially retained to afford all information without any expense to the applicant.

Stamped ornamental Zinc has been used with good effect, amongst others,—on the Charing Cross Hotel; the Langham Hotel, Regent-street; and at No. 14, Piccadilly.

Zinc, properly laid, has been proved by most extensive and long experience in France, Belgium, Germany, and Italy, to be a most secure, durable, and therefore economical covering, and is now preferred in those countries for roofs to all other materials; nor are there any detrimental effects from any particular climate to be feared, so that care be taken to adhere to the proper mode of laying, and to the proper gauges.

The lightness of the metal makes it most valuable for covering buildings requiring large spans, with comparatively light framing. On a rough calculation, it may be estimated that not less than from forty to fifty millions square feet is the average surface now annually covered with Zinc in the above-mentioned countries alone.

N.B.—A good covering of Zinc, properly laid, is neat in appearance, perfectly water-tight, durable, and not easily put out of order; but, badly laid, will not answer. It costs no more to lay the metal well; and, to encourage the wider employment of a proper system, a Special Discount will, as heretofore, be allowed on all roofs certified by either of the Company's Architects to be properly laid.

FOR THE PURCHASE OF ROOFING ZINC, APPLY DIRECTLY TO EITHER OF THE ABOVE-MENTIONED SPECIAL AGENTS.

Engineering Depot, Palace Wharf, Stangate, Lambeth, S.

The Builder.

VOL. XXII.—No. 1143.

An Eastern Picture: Damascus.

E are standing on the summit of one of a row of hills looking down upon an extensive plain, all aglow in the rays of an evening sun. The range of our vision extends to a distance of twenty miles at least, and it is bounded by a tawny-coloured expanse of sandy desert, here and there relieved by grey mountains in the dim distance. Not a blade of grass is to be seen; the plain and the mountain on which we stand are parched and burnt up by the constant heat of the sun of the East. But most refreshing to the eyes of travellers who have endured eight hours of a transit across the burning Sahara is the billowy sea of foliage rippling and waving almost at our feet,—a sea of dark green some five miles broad by eight or ten in length,—a dark patch upon the yellow sand, without a softening border of verdure, looking as though it had been cut out of some Amazonian forest, and put down in the desert purposely to gladden the heart of the weary traveller.

In the midst of the sea there is a mud-coloured island—a city of flat-roofed houses, with minarets springing up amongst them as though to catch the rays of light ere they depart. Here and there, between the masses of green formed by cypress, poplar, and palm-tree, may be seen silvery lines of light—numerous streams, the secret sources of all this wealth of nature. We descend, anxious to explore the recesses of these forests, and to enter the half-concealed city. Instead of entering immediately, we make a half circuit round its battlemented walls, and approach a ruined Roman gateway situate on the opposite side of the city to that from which we first beheld it.

The gateway consists of a mass of wall, about 90 ft. in length by 50 ft. in height. It is divided into three compartments by narrow pilasters. Each compartment has an archway, that in the centre being 21 ft. wide, the others narrower. They all have pilasters and architraves, with semi-circular arches above, and two of them are built up. We enter the third by a circuitous passage, formed for the better security of the city in case of attack. But where are we? Surely in a city of the dead. As far as we can see before us and on both sides, are ruined houses. All is desolation. As we proceed, we peep into what were formerly the courts of luxurious mansions. Mosaics are still upon the walls. Traces of painting are still to be seen, together with richly-carved wood and stone work, half destroyed. We see churches levelled to the ground, and cottages unroofed. What has caused all this destruction,—water, fire, or earthquake? The fire of fanaticism burning in men's bosoms. We are in the street called Straight, in the Christian quarter of the holy city of Damascus, rightly named Sham,—beautiful without, but within "all death, all rottenness, and bones," where, a few short years ago, hundreds of Christians were massacred for their faith, and thousands had their property stolen and their homes rendered desolate. We pass on to the central quarter, over heaps of rubbish from the ruins. Here the houses are mean enough externally, the walls being plastered with mud, and the windows latticed, and the doorways low and unobtrusive; but when we enter we find the houses the most beautiful in the world. Our hotel, for instance,—an ancient mansion, recently appropriated by Demetri to the accommodation of travellers,—might be passed a hundred times without being noticed. It has no sign. Its outer door opens into a small court; from thence a passage leads into a second court, 80 ft. or 100 ft. square, surrounded by buildings. In the centre of the side opposite the entrance, is a recess, 20 ft. square, with a pointed arch the full height of the house in front of it. It is ceiled with wood covered with arabesque patterns painted in positive colours. All round it there is a low divan, and it has a dado of inlaid marbles. This is the *lewan*, in which visitors are received, common to the mansions of Damascus. On either side of the *lewan* there are guest-chambers. On another side of the court is the *salon* where we dine, and opposite the *lewan* is a still finer building, the plan of which may be best understood by imagining six squares arranged so as to form a block, three squares in length and two in depth. The central division towards the court, or hall, is higher than the rest; those divisions contiguous to it at the sides, and that at the back, open into it, and are separated from it by pointed arches as high as that of the *lewan*. The two other divisions are separated from the rest by walls, with doors and windows in them. The pavement throughout is of marble mosaic, and in the centre of the hall is a fountain, the splashing of whose water is so essential to the Oriental when he wishes to make *kief*. The ceilings are all beautifully diapered, and the walls painted in stripes of red, blue, and white.

The water-supply of Damascus is excellent. The rivers Abana and Pharpar and their numerous streamlets supply every house with water through a tank which is placed in the centre of the court, and surrounded by orange-trees and myrtles. Wherever there is water in a hot country there is vegetation; and where there are trees and pasturage there are inhabitants. For these reasons we can easily imagine how, in the early ages of the world's history, nomad tribes were induced to form a settlement here, and thus founded Damascus, the town of Eliezer, Abraham's steward, and one of the four oldest cities in the world.

Our hotel is but one of the smaller of the magnificent palaces which adorn the town. We afterwards visit the finest, which belonged to one of the first men of the city,—a wretch who hounded on the rabble at the time of the massacre, and was in consequence sent to comfortable banishment in the island of Rhodes. The general features were the same as those of our hotel, except that it had three courts, the third and largest, or harem, being 500 ft. or 600 ft. in length. Here the *lewan* and women's apartments were situate. The decorations throughout were much more gorgeous than those just described, the walls being lined with delicate arabesque patterns, in coloured marbles, set in a white ground. The first court was for servants and slaves, and the second for the accommodation of guests.

We visited also the modern house of a rich Jew, which had one court, also enriched with painting, gilding, and inlaid marbles—but garish and gaudy—not so pleasing in effect as in the older mansions, where the ornamentation is of a freer character, and the colours are toned down by age.

There is no greater contrast between the manners of the inhabitants of the East and West than in the mode in which they build their houses. Popkins, the citizen of London, when he builds his suburban villa, makes it smart and showy outside; he decorates it with compo columns and cornices, or makes it still more attractive by the extravagance of variegated brickwork used without stint, because it is *bizarre*, and therefore fashionable. Abou ben Sakal, merchant of Damascus, on the contrary, lavishes his thousands on the interior. He builds his palace of marble, he ceils it with cedar, and paints it with ultramarine and vermillion; and then plasters the exterior with mud, so that no one would surmise the wealth that was within it. But Popkins is right, and Abou is wrong: one builds for the public,—in the warmth of his benevolence he wishes to show them something tasty; the other builds a splendid den for himself and his harem, and lives in it a sensual, sordid life, careless of all that goes on around him. He builds his house for himself, and he enjoys it in his selfish way. Such men as he it was who instigated the murderers of the Christians. Demetri, who was a survivor, tells us how it all came to pass. One evening he was standing on the terrace of his house, looking down into the street, when he saw a crowd of mere boys rushing from the bazaars to the Christian quarter, with sticks and stones in their hands, crying "Death to the Nusrani!" This was but a little leaven, but on the morrow the whole of the scum of the city rose, and began to pillage, and then, finding there was no resistance, began to slay. They were soon joined by wandering Arabs and Druzes from without, who scented their prey from afar, and flocked by hundreds into the city. The work of destruction was done very systematically. Every day thirty or forty houses were sacked, and their inhabitants—young men or grey beards, women or children—were beaten to death with clubs, stabbed, or torn to pieces on their thresholds. Poor lambs! they offered no resistance: they were Christians, and thought it no loss to be martyrs.

Now, we do not as a rule admire the Eastern Christian; and would much rather do business with a Turk. But in this last act of heroism they beat us,—their superiors in all else. Suppose all those who would confess themselves Christians in Belgravia were sentenced to be butchered, and all in Cheapside were to have their heads chopped off, would all stand true to their colours? How many confessors would there be? There is no doubt but that the assassins were stimulated to exertion by the heads of the chief families. But amidst all this Moslem fanaticism there was one noble heart, that gallant gentleman,—call him saint, or saint, as you will,—Ab del Kader, who sallied forth at the head of his body-guard and rescued hundreds: he for some days fed and sheltered them in his konak; and, when they became too numerous to be accommodated, escorted them to the citadel.

The centre of attraction in Damascus is, of course, the great mosque anciently a Christian church, and before that a Roman temple. It is so surrounded by the bazaars that no part of it can be seen until its court is entered. This mosque being one of the three holiest in the world, was closed to the Christian, until the visit of the Great Opener of holy places in the East—the Prince of Wales. Porter, who was five years in Damascus, and who has given a description of it, derived from a Christian workman employed in repairing it, never entered it. De Saulcy and Schubert had to climb to the roof of the bazaar to get a glimpse of it; nor was Miss Beaufort more fortunate. We know of no published description of the interior, though it is to be hoped we shall have an accurate one before long. The following notes were hurriedly taken in the midst of a scowling, sneering

crowd, and therefore they must be received with due indulgence. The English Consul being at his summer residence in the mountains during this visit, we availed ourselves of the escort of two cavasses from the Prussian Consulate, sent for the protection of one of our party. We passed through the bazaars rapidly, for fear of attracting a crowd, and descended through the book bazaar by a flight of steps to a lower level. Here we passed under a ruined Roman archway, the top of which we afterwards saw from the yard of the mosque, and between two rows of fine marble columns and Corinthian capitals. There had been ten on each side; those that remained were built into the bazaar walls. This was the chief approach to the ancient temple. We then entered an oblong court-yard, on the north side of the mosque, which was the full length of the building, 431 ft., and about half its width. The court has a cloister running round it on the three sides not occupied by the mosque. On the east and west sides it is divided into compartments by square piers. In each compartment there are three semicircular arches springing from marble columns, with Corinthian capitals, and large blocks forming the *abaci*. On the north side the arches are, for the most part, of the horse-shoe form, and they spring from piers. A second story runs round the court, having a recess above each arch, occupied by a two-light window with round arches, and a slender column in the centre.

The mosque itself is an oblong building with three roofs running longitudinally. It is divided into two equal parts by a transept, the side walls of which rise above the ridge of the central roof. In the centre of the transept there is a dome. The side walls of the mosque are divided by piers about 25 ft. in height, from which spring pointed arches. Above each arch are two windows with semicircular arches; the head of the arches and all the windows are filled with patterns in stucco or stone, such as are generally to be seen in the windows of mosques in the East. The transept on the north has three pointed arches, springing from rich marble columns with large *abaci*, and above there is a three-light round-arched window, all circumscribed by a large pointed arch. What we missed most on entering was any distinct arrangement of the interior showing that the building had once been a Christian church. There was neither apse nor indeed any defined chancel. Two ranges of Corinthian columns, ten on each side, with *abaci* making them the same height as the outer piers, reached to the transept, which was separated from the nave and aisles by the large pointed arches. In the wall above the arcade, were openings corresponding with the windows on the north side. The roofs are quite plain, with the beams and other timbers visible. The nave was about a fourth wider than the aisles. On the other side of the transept the arrangement was exactly similar. Both the east and west ends were flat and quite plain.

Pococke says that the altar stood under the dome; but how that could be, unless the eastern part of the church has been lengthened, one cannot well see. Without doubt, the building has undergone great changes. It seems, from the great number of columns surrounding it (there was a colonnade of twenty columns on the west, another of forty-two to the east, and on the south side a quadrangular inclosure of eighty-six columns) to have been originally one of those immense edifices, or collections of edifices, dedicated to the worship of Baal, like that at Balbec, or like Tadmor, in the desert. An inscription discovered some years ago, but subsequently destroyed, stated that it was converted into a church, and dedicated to St. John the Baptist, by Arcadius, the son and successor of Theodosius. Arcadius reigned from A.D. 395 to A.D. 408. To this period may be assigned the arcade and nave walls; but the outer walls and dome were built by the Mahometans, who took Damascus from the Christians in the commencement of the seventh century. They brought rich marble from all parts to rebuild the edifice, and decorated the dome with representations in mosaic of the cities of Mecca, Medina, and Jerusalem, between rows of palm trees. These are still visible. As the Crusaders never succeeded in taking the holy city of El Sham, it has remained in the hands of the Moslem ever since. Before leaving the mosque we mounted to the gallery of a minaret on the north side of the court, and obtained a rough sketch of the side of the mosque in spite of the murmurs of the crowd. We unwillingly came to the conclusion that, though the mosque is a magnificent building, there is but little in the plan or general character of the edifice that indicates its Christian origin; though when careful measured drawings come to be made of it, many details may be brought to light which are not easily to be perceived by the observer who is now able to pay only a hurried visit. In the meantime, the student of Eastern ecclesiology must be content with the plan engraved in Porter's "Damascus," and the interesting remarks that accompany it.

THE FUTURE CAPITAL OF ITALY.

The commissary sent from Turin to determine on the localities for Government offices in Florence, had instructions to the effect that, in every instance, the interests of fine art and public monuments were to be regarded, and their sites undisturbed. We may confidently expect therefore that, amidst the new appropriations to be made and new aspects presented by the future capital, her artistic character will be religiously respected, and nothing bearing the monumental stamp be allowed to suffer prejudice.

Having just visited the sculptors' studii, where two works of really a high character are now being prepared, ordered by public commission for erection in conspicuous places, with worthy addition to the art-adornments of this city, we trust that one more report on this subject may be acceptable to the readers of the *Builder*. After long familiarity with modern Italian sculpture during years of residence at Rome, we cannot but give our suffrages to the merits of those works by Pazzi and Fedi, as among the noblest produced by Italian chisels within any modern date. "Dante,"—a statue about 6 mètres high, to be erected in the piazza before the S. Croce Church, and solemnly inaugurated on occasion of the centenary festival in the great poet's honour, 27th of May, 1865,—is by far the finest treatment of its subject yet produced in the sculpture of this land, and hitherto the most successful work of Signor Pazzi, a native of Ravenna, who is still a young man, intelligent, and ready with obliging frankness to explain his ideas to visitors. He represents the poet with the laurel crown on his head, the volume of the "Comedy Divine" in the right hand, whilst the left holds up the folds of a long flowing mantle; an eagle (symbol of the Imperial supremacy he reared, and demanded as the inalienable right of Rome, or, at least, of the successors to her ancient sway) standing at his feet; the costume strictly historic, and somewhat like that of Franciscan friars, minus the scapular and cowl. In the treatment of the countenance the artist has been guided by the *norma* supplied in a most interesting relic possessed by the Torrigiani family in this city, the genuine mask, or cast, of the original taken after death, a plaster of which, from the Torrigiani Palace, we see in his studio, giving the idea of a physiognomy far more expressive and finely marked than is the traditionary type of Dante's head seen in most of the art-groupings where he is introduced. When Signor Pazzi invited us to ascend the scaffolding in which this statue is now, so to say, encased, we were able to appreciate the mournful yet noble intellectuality of this countenance far better than, in the present stage of his work, is possible whilst we regard it from below; still more could we, from this nearer point of view, perceive the high merit of his conception in the plaster, from the clay model of the head, or smaller scale that serves as original to the assistants labouring on the marble colossus. The blending of a majestic sorrow with a deep-felt but tempered indignation in this head reminding us of Byron's line—

"My heart shall be pour'd over thee and break,"—

is a condensed expression of the "immortal exile's" feeling towards his ungrateful country. Signor Pazzi regrets the necessity imposed upon him of finishing this statue by a given date; and he has yet to execute three reliefs for the fronts of the pedestal, which, we heard with surprise, is to stand higher by one-fifth than the statue itself,—12 Florentine *braccia*. Two of the subjects for these reliefs he has chosen, and judiciously,— the meeting with *Sordello* in the "Paradise," and the colloquy with St. Peter, in which that apostle sublimely denounces the vices and worldliness of his successors in the Papal See, a theme sure to strike the chords of Italian feeling as now wound up for response. In his studio we see two statuettes, presentiments of the various ideas adopted by this artist before evolving that which he has finally worked out in the colossal "Dante;" and we may pay him a sincere compliment in pronouncing decidedly in favour of the last above the previous phases of that idea's development.

In the May of next year will also be ready another colossal work of sculpture, that by Fedi, purchased with commendable spirit and appreciation by subscription among citizens mostly of the artizan class, for an honourable, and, indeed, deserved location in the portico of Orgagna's loggia, to stand beside the "Perseus" of Cellini, and the "Rape of the Sabines" of Giovanni Bologna. We very much regret the choice of such a subject, neither national nor historic, and failing to appeal to any existent sympathy or conviction, as "Pyrrhus sacrificing Polyxena," the sanguinary expiation to the manes of Achilles, about to offer which the warrior is seizing the hapless girl in his arms, trampling upon the body of her youthful brother, and spurning the agonized Hecuba who crouches at his feet, vainly endeavouring to detain her child from his grasp. The only conception or treatment by which such a subject could be elevated into a high or poetic sphere, is that which strikes us as forming the distinctive merits of Fedi's group; a subordinating, namely, of the contrasted passions and vehement action of this scene to effects of dignity and grace in form; still more, the investing of the sanguinary sacrifice with a character of religious duty and solemn obligation, as, indeed, appears finely indicated in the calm, the heroic resolve of Pyrrhus, whose features are moulded on the true type of Greek beauty, distorted by no passion, yet terrible as the God of War himself. In execution this group is admirable, and the hurried movement, the helpless despair of the victim, the anguish of the mother, are alike powerfully conveyed. Fedi's is one of the best filled among studii of sculpture in Florence; the "Genius of Tuscan Civilization" is one of his single figures recently finished for the Prince di Cariguano; but all his other works are far surpassed by the great creation destined for the loggia. One thing that strikes us in modern Tuscan art, both painting and sculpture, is the inferiority manifest in that class of subjects once the especial and triumphantly asserted province of Italian genius—the traditionary religious and devotional. The pictures on sacred subjects in the Exhibition of Modern Art now open are quite below notice, if above mediocrity; and it seems that in this walk Italy has arrived at an epoch of transition: on one hand, manifest decline; on the other, promise and progress.

Engineers have been appointed for the several sections into which the works for enlargement of Florence will be divided. Much activity is now noticeable in the labours for lowering the level and laying out new street-lines along spacious and hitherto unoccupied lots of ground between the gates of S. Gallo and Pinti, at the city's northern limits. It is announced that the amplification in the same direction, beyond the existing line of walls, will be to such extent as to include the church of S. Domenico, beautifully situate on a terrace of the ascent towards Fiesole, and distant a good three-quarters of an hour's walk from the Porta Pinti. The old convent annexed to that church, founded about 1406, is that where Fra Angelico da Fiesole made his novitiate and took vows as a friar; one of those many religious houses suppressed by the French Government in the early years of the present century, now let for lodging to families, but the cloisters tenantless and silent, though still a pleasant scene, their arcades being filled with lemon-trees and flowers, the area within cultivated as a vegetable garden for the Capponi family, now proprietors. From these cloisters we pass into a large vaulted refectory, dim-lighted, and filled with the same fruit-laden trees, where an old gardener draws aside folding shutters to display a veritable treasure of art, the "Crucifixion," a fresco, with life-size figures, the Mother and St. John standing beside the Cross, St. Domenic kneeling below, by Angelico. Poggio Imperiale, the royal villa on a height amidst gardens, which mark a limit of the proposed civic extension on the southern side, is about twelve minutes' walk from the Porta Romana. The report that S. Miniato, with its steep hill, is also to be comprised, seems questionable; but we may believe it probable that another project will be carried out for isolating that fine old church, by throwing down a block of unsightly buildings that now unite it with the adjacent long-deserted monastery, and also con-

verting the spacious esplanade in front into a species of Valhalla, with monuments of the illustrious dead. Another pleasant villa certainly will be included within the future city, that becomes Classic as the imagined scene of the *Decamerone*, to which Rogers refers with so much delight in his "Italy," and which stands beautifully amidst cypresses and other evergreens, on a slope above a cultured valley, towards Fiesole; long a deserted home, for this residence, known as Schifanoia, was bequeathed to the last Grand Duchess by its former owner, a wealthy English lady named Farrel.

A committee has been formed for erecting by subscription a monument to the dramatic poet, Niccolini, at S. Croce, where he was buried with public honours; and it is worth noticing (not for the sake of the amount, but as proof of sympathy from afar,) that 800 francs have been contributed from the Venetian provinces.

Of the ten or eleven journals (most of them daily) now published here, not one occupies itself, *ex professo*, on either Belles Lettres or Fine Arts a deficiency, indeed, that ought to be considered in the new capital of Italy, as neither creditable nor just towards claims of the meritorious classes. But the witty little *Gazzetta del Popolo* was pleased to be sarcastic, the other day, respecting certain subordinate restorations lately effected in the sculptured ornaments of Orgagna's Loggia: the small figures of couchant lions on mensolæ, four of which are placed round the lower part of each pilaster supporting the arcades of that majestic structure; and assuredly the *new* lions that now show their faces in this series, are, as the *Gazzetta* declares, rather like bad imitations of cats than genuine effigies of the lord of the forest.

One of the projects now in discussion is the uniting of all the public libraries of Florence in one great centre, for which has been suggested the present Hospital of S. Maria Nuova, an immense establishment, once a convent, till purchased for charitable appropriation in 1300. The library of the Accademia delle Belle Arti, a valuable though but small collection (about 8,000 volumes), purchased in its nucleus from the heirs of the architect Salvetti, by the young King of Etruria, 1801, to be bestowed on that institution, is public only during the winter months. On the 25th of November were opened the schools of drawing, bas-relief, architecture, perspective, and *ornato*, at this academy, for admission into which experimental examinations must be passed through, or certificates presented by candidates of the completed course of studies in other schools at the Istituto Tecnico. It was in 1339 that this Art Association had its origin as the "Company of St. Luke," aggregated to the "Guild of Physicians and Chemists;" afterwards raised by Cosimo I. to the rank of an academy; and by Peter Leopold endowed with its present ample *locale* in a suppressed hospital, augmented by the addition to its buildings of a suppressed convent, and enriched by its present inestimable collection of Early Christian art under French government. In the time of Peter Leopold, only limited numbers—18, 12, 8, &c.—were admitted into its several schools, as the *alumni* gave proofs of superior claims satisfactory to the board of directors; but a more liberal system, free of such restriction, is that now prevailing, to the regret, we understand, of veterans attached to the old *régime*. The "Society for the Encouragement of Theatric Art in Florence" has lately published three competitions for prize comedies (subjects not determined), one of these *concorsi* being called by the name "Ristori;" and at the same time is invited the concurrence of young amateur Thespians to assist the *alumni* of the "School of Declamation," which gives *quasi* public performances at its theatre in the academy-buildings once a week during winter, in the production of the successful pieces.

We regret to have no tidings respecting the façade of the cathedral, other projects nowabsorbing public attention, and, it may be supposed, public funds likewise; though assuredly this, so important to the dignity of Florence, will not be forgotten. Photographs from the several designs, at sale in the shops of principal streets, constantly remind pedestrians of the great *desideratum*.

CLARING-CROSS HOTEL.—We are asked to mention that all the plaster enrichments inside, the cement pediments with arms in porches outside the building, the carving of panels in porches, and arms, &c., in lodges, were modelled and supplied by Messrs. Mabey & Son.

ART-INDUSTRY AND THE SOCIETY OF ARTS.

IN the paper read at the Society of Arts on the 21st inst., Mr. Davenport, after setting forth the various steps taken by the Society during many years to promote Industrial Education, and the endeavours it is still making, concluded with the following suggestions:—

"At the present moment it is, jointly with the Company of Coach and Coach Harness Makers, about to give patronage to the workmen engaged in that trade who are about to hold an exhibition of the products of their skill and industry. Out of London it has contributed to a prize fund for the promotion of improved design and increased skill and ingenuity on the part of the Whitby jet-workers; and the question at once arises, would it be possible to induce a combined action on the part of the eighty City companies, the Chambers of Commerce, and other Bodies in aid of the industrial education of the youths of the present day, as well as to encourage skilled workmen by the offer and award of prizes in each of their respective industries.

The Society of Arts has already begun the work, both by awarding prizes to skilled workmen and the institution of lectures on the application of science to industry; it will doubtless continue and extend its action in both directions; but to attain real instruction in science, more than lectures are necessary. Classes, under competent professors must be formed, if industries are to be benefited. At the close of the Great Exhibition of 1851, in order to attain more education in technical knowledge, it was said that the effort should be made to educate downwards—to give less classical and more practical education. The Society did not accept that proposition, but, beginning with the working classes, has been endeavouring to educate them upward; and now that its examinations have enabled their education to be tested and the fitness of youths to be advanced into classes where they may acquire precise knowledge as affecting industries, one of the difficulties in the way of the establishment of classes for industrial instruction is got rid of. The certificates of our own examiners, of those awarded at the Oxford Middle Class Examinations, which arose out of our own action, of the London Universities and others, should be the passport to our industrial classes.

If, then, the City Companies could be induced to co-operate with the Society of Arts in establishing a system of instruction and a test of the degree of knowledge acquired by those who are apprenticed by their corporations; if they would assist and co-operate with the Society of Arts, by offering and awarding prizes to the skilled workman, the Society might again create for the benefit of the public, Annual Displays and Exhibitions of the Products of British Industry, to which British manufacturers might send selections from their yearly commercial products, not advertising specimens got up for great exhibitions regardless of cost; the highly-finished and mechanical inventions of each year might also be added, as well as samples of raw produce and imports, or selections from them. To effect the latter object it might be necessary to urge upon Government the propriety of its doing for commerce what it already does for literature, by compelling the deposit in our national library of a copy of each work produced for sale; in like manner it might compel the deposit, when required, of samples of new imports.

Thus we should have an aggregation of the products of Arts, Manufactures, and Commerce, from which to select specimens for a National Trade Museum, which would again form the basis for a continued course of industrial instruction."

At the close of the paper, the Chairman, Mr. William Hawes, having invited discussion,—

Mr. H. Cole, C.B., remarked that there was one paragraph in Mr. Davenport's paper with which he could not agree. That was with regard to the Government compelling the deposit in some national museum of a copy of each manufactured work produced for sale. He thought Mr. Davenport was mistaken in supposing that Government could compel people to make such a deposit. For his own part, he should be sorry to see any such compulsory law as that hinted at. Indeed, he thought it was not creditable in the present day that there should be a law compelling authors to deposit gratuitously copies of their works in the library of the British Museum and other public institutions. It was not an agreeable thing for a public officer, in the exercise of his duties, to be constantly summoning publishers to the police-court for not conforming to the law in this respect. He believed it was detrimental to literature, and he conceived it would be so to manufactures; and further, he felt certain that to build a huge Babel to hold specimens of the character named—good, bad, and indifferent, as the case might be—would be most tiresome and uninteresting to visitors. He would now turn to the Exhibition arranged for inspection [the works of Industrial Art submitted for prizes], and he must congratulate the competitors upon it. Although he had been unable to do more than take a cursory view of the objects, he felt assured that a considerable advance had been made in the quality of the work over that of last year. He had no doubt this idea of inducing artist-workmen to exhibit specimens of their handicraft would fructify. It would go on increasing, as was the case with the Royal Academy, which more than a century ago had started from small beginnings. In the outset of such a work as this, however, no doubt there would be some errors in detail which might require amendment, more especially as to the conditions attaching to some of the prizes offered. He feared that these conditions in some instances had perhaps prevented the sending in of so many specimens as might have been expected. For instance, a dozen casts of the bust of Clytie had been sold to workmen, but one only had been finished in bronze and sent in. This led him to fear that there was some condition connected with that matter which impeded competition. It might be that the bust was not delivered in time for the work to be done in the workmen's overtime, for it should be remembered that these things were executed in the workmen's overtime. He hoped the same bust would be competed for next year, so that the labour of those who had bought the cast this year might not be thrown away. Then again, it might be considered that the works which the council had put forth to be done were not such as, when finished, would be saleable commercial articles. That was, no doubt, partially true, though in their selection the council had endeavoured to bear that principle in mind. He thought, however, he saw among the articles exhibited some which might properly be bought for the South Kensington Museum, and he hoped the Lord President would take that view. As an individual member of the Society, it occurred to him whether, in the selection of objects to be presented for execution in their next programme, it would not be well to take the workmen themselves into consultation, and ascertain which they would suggest as most fitted for the purpose; and he also thought the object might be still further promoted by a little co-operation on the part of those who were interested in special manufactures. He thought the council would do well to receive suggestions from those quarters as to the subjects to be selected for competition. He would only further remark, that though some of these articles now exhibited might not be immediately saleable, yet he believed in many instances they would be the means of producing commissions for the producers of such articles. He might state that at South Kensington wood carvings were wanted; and he saw specimens this evening which led him to think that the persons who executed them might be called on to do something for that national establishment. He was gratified at seeing indications of a new branch of industry springing up, viz., glass mosaics. The heads exhibited there were the first publicly-exhibited specimens of glass mosaics by English artisans he had ever seen. He considered these worthy of great attention, as he was satisfied before many years there would be a very extensive application of glass mosaics for decorative purposes. He had reason to believe that more than one of these specimens had been produced by females. It was a branch of industry in which that sex might be well employed, and he would only throw out the hint to those who might hereafter desire to engage in it, that, as an indispensable preliminary, they should possess a sound knowledge and power of drawing.

Mr. D. Roberton Blaine had listened with great pleasure to the admirable paper; and his single objection to what had been advanced in it was confined to that part which had been alluded to by Mr. Cole, the compulsory deposit of specimens of manufactures at the expense of the manufacturers themselves.

The Chairman, quoting the passage of the paper referred to, said the suggestion only applied to "new imports" of raw materials employed in manufactures.

Mr. Blaine said the suggestion was an admirable one, if it were done at the expense of the Government; otherwise he took exception to it. In the case of the precedent that had been quoted, viz., on the compulsory deposit of copies of literary works in public libraries, he knew it operated in many cases as a great hardship upon authors and publishers, especially in the case of the more expensive works. If they wanted copies of works to be deposited, he thought the Government and the universities ought to pay for them. With regard to the many beautiful works which they saw before them, they afforded illustrations of the rapid advance which was making in art-workmanship in this country. Mr. Blaine named one or two as obviously good. He referred with great satisfaction to the testimony borne by the French artisans who visited the Great Exhibition to the great progress made in this branch of industry by the workmen of this country. That was one great proof of the benefits of international exhibitions. The French people were now pressing upon their Government the importance of following the example of this country in promoting schools of art, because they saw the

wonderful progress which had been made in England since the Government Schools of Art had been established.

Mr. Peter Graham, referring to the selection of the special objects for execution, remarked that he regarded this as a necessary step, in the first instance, as serving for a guide to the competitors as to the class of works on which their skill should be exercised. On future occasions he thought more scope might be allowed, and that workmen might be permitted to bring their original works as proofs of talent in design as well as power of execution. It was due to Mr. Davenport to thank him for several excellent suggestions he had thrown out in his paper. It would be a most desirable thing to obtain the co-operation of the wealthy City companies and guilds: take, for instance, the Goldsmiths' Company: he thought it was rather a reproach to that important company that it had not come forward to encourage by prizes the development of those beautiful arts with which it was identified. It possessed immense wealth; and he did not know how it could better promote the interests of the guild, or do anything more creditable than to offer prizes in every branch of the goldsmith's art. The same remarks applied to other companies. One of the poorest and most obscure of those guilds, the Painter-Stainers, had been the first to set an example in this direction. He had not yet minutely examined the collection of objects before them, but he could see at a glance that there was a great advance upon the display of last year; and, no doubt, if it was carried on in a right spirit, they would see improvement year by year, till the art-workmen of England were equal in execution to those of any other country in the world.

Mr. Winkworth said that he thought his friends Mr. Cole and Mr. Blaine had occupied too much time in discussing a point which was not important to the immediate object of the paper, and respecting which they had not quite apprehended Mr. Davenport's precise meaning. He had not, as they supposed, approved the policy, amounting to confiscation, of compelling authors to deposit copies of their works at the British Museum, the Universities, and other public institutions; but, assuming that it was to continue a law of the land, might it not be usefully extended, in the way suggested in his paper, to the promotion of art-manufacture education? Mr. Davenport had favoured them with a well-digested historical epitome of the action of the Society in the direction of industrial education, and in so doing could not fail to pay a tribute of recognition to the services Mr. Harry Chester had rendered to the cause of adult education in all its branches, by suggesting and initiating a system of competition which had bornemost gratifying fruit, and the benefits of which were being daily extended. That which he had organized might be introduced into a sphere of education which should give to the artisan a kind of technical knowledge, of which English workmen were for the most part ignorant or with which they were only partially acquainted. He had in his paper suggested several new directions, as, for instance, lectures and classes, conducted by professors, by which instruction in art and science, so far as they bore on skilled industry, might be properly communicated; and one original way in which this might be encouraged, the action of the trade guilds and companies, might be invoked, as in the case of the Painter-Stainers' Company and others. To this he (Mr. Winkworth) cordially assented; but Mr. Davenport should not indulge the hope that the suggestion would meet with universal acquiescence, for it must not be forgotten that many of those corporations had outlived the trades for the promotion of which they were ostensibly established. Others, again, as the Fishmongers' and Spectacle-makers', did not seem to afford scope for the offer of prizes for new discoveries or appliances in their particular branches of trade. The bulk of the members of many of the City companies had, in fact, no idea of the crafts they were apprenticed to learn, and the secrets of which they were sworn not to divulge. Others, again, had no funds that could be legally diverted to objects external to their own. But, on the other hand, the City companies were in the aggregate wealthy and patriotic; and, whether their own specialities afforded scope or not for the offer of prizes to elicit talent in the cultivation of them, they would no doubt, if suitably approached, be found willing to contribute of their abundance towards objects so legitimate and praiseworthy as Mr. Davenport in his paper had so luminously pointed out. He doubted whether, as the articles in and around the room which had attracted so much attention—and to some extent admiration also—were sent in competition for prizes, it was judicious or fair to anticipate the awards of the adjudicators hereafter to be appointed, by specially noticing certain specimens of art in the room which, in the opinion of the speaker, Mr. Blaine, were beautifully designed and executed.

Mr. Godwin could not allow the last observation to pass without comment, as it seemed to him the claims and defects of the various objects exhibited could not be discussed too much, since this would aid in leading to a fair adjudication. He confessed he did not take quite the same satisfactory view of the articles exhibited which the gentlemen who preceded him had done. That the collection was much better than on the previous occasion there could be no question; but that it came up to the inducements held out by the Council of the Society he was unable to say. Premiums to the extent of nearly 600*l.* were offered by the Society for objects in all branches of art-industry; and though there were many excellent works in the collection, he was afraid, when the majority came to be critically examined, a small number only would be found entitled to high commendation. The inference to be drawn was, that there was yet something more to be done than the mere offering of prizes. They had to labour to induce a greater appreciation of the necessity of art-education. Looking at the means now afforded to working men and to those above them, advance was comparatively easy. He had been frequently called upon by old workmen, journeymen carpenters, bricklayers, and plasterers, for advice as to what they could do for their sons, in order to get them out of the fixed drudgery in which they themselves had been compelled to labour for so many years. His first simple advice was, and he wished the hint might find its way into the workshops of this country,—let them learn drawing. There were schools of design throughout the metropolis, and in nearly every large town. If it was necessary, the parents must make a little sacrifice to enable their children to do this. Sacrifices had to be made by all classes. In so doing, they would at once enable their children to rise above their own position. Their course was now easy compared with what it was formerly: schools of design were plentiful; competitions were open; there were the examinations and prizes of the Society of Arts; and there was a wide field open for the development of the fine arts for decorative purposes, domestic and ecclesiastical. The moment a man showed ability he was sure to be taken by the hand, and to raise himself a step beyond the position in which his father was toiling. They wanted in addition, however, some little effort on the part of manufacturers and from the large builders. He thought the system of apprenticeship had been too much neglected. It should be urged upon the large builders and others that they should aid their men in pushing forward their sons; that they should take the sons into their establishments, and enable them to gain a superior position in their trade. It was a lamentable fact, that notwithstanding what had been already done, the great body of building artisans of the present day were inferior in skill as a class to the artisans of seventy years ago. They could not get the same proportion of good bricklayers, or an equal number of carpenters with the same amount of geometrical knowledge as formerly. The system of contract work had led to a demand for quantity rather than quality. The absorption of various trades into one person's hands, in the shape of contractors, had destroyed emulation, and stood in the way of the small masters. As an instance, he referred to the fine plastering which was to be seen in some of the older houses in London. There were not many men now to be found to do this work. It therefore behoved this Society to go on in its course of stimulating the education of the artisan. At the late Exhibition of the Architectural Museum, only five specimens of wood-carving were sent in for competition for prizes up to 20*l.*, and none of these had been considered by the Council (though he thought differently himself) entitled to receive a prize. That showed how small the response had been there; and it was small on the present occasion, taking into consideration the large sum offered in premiums by the Society of Arts. The notion had been entertained by himself and others that it would be well to invite the skilled artisans of London to a conference in that room, in order that they might state why they had not competed more largely, and under what circumstances they would compete. Such a proceeding would put them in possession of facts which would enable them to obtain larger results. What was sought for by these competitions was the encouragement of a more intimate union between the fine arts and manufactures—the wedding of Venus and Vulcan. Speaking of the latter, he was sorry to note how small was the response as regarded hammered iron and brass work. It was ridiculous that there should be only three small specimens of this description of work sent in in response to the appeal that had been made. He was sure all present would thank Mr. Davenport for his paper. He was not certain that they could look to the great City companies for more than pecuniary aid. The competitors would require to be assured from the beginning that those who were to be the judges of their work had some practical acquaintance with it. Companies were not qualified themselves to be the adjudicators of the prizes; and the workmen would not have confidence in their judgment. With regard to lectures, they were important and valuable, but they would not alone make good artisans or good art-workmen. There must be actual practice in the studio and workshop. He again urged the importance of a right system of apprenticeship.

Mr. B. Waterhouse Hawkins would venture to support the suggestion made by Mr. Cole, and repeated by Mr. Graham, viz., giving a little more liberty in the conditions of the competition, to the extent that while certain photographs and models might be selected as the type of the work to be performed, the workmen should be at liberty to enlarge upon the original design, that it might be employed in the decoration of some article of utility, so that the person who succeeded in that direction might find his reward in having produced an article which in itself would be saleable, and not a mere abstract work of art. In the production of these works, it must be remembered that the artisan occupied his time after the ordinary hours of labour, and hence he thought the time allowed was scarcely sufficient. The greater part of the work could only be performed during the evenings in summer time. He was inclined to think that by giving a longer time they would have a larger collection of works sent in.

Mr. Thomas Jones, with reference to the co-operation of the City companies, remarked that, so far from the Goldsmiths' Company assisting in the production of works of art, their practice in testing the purity of the metal employed, and sent to them for that purpose, did much injury to them. Works of excellent truthfulness and perfection of form sent there to receive the certificate of the company that the material was of a given standard, were, from the manner in which they were treated, unnecessarily disfigured, and rendered unfit for sale until they had a second time passed through the hands of the workman. It would be a great benefit if this Society could become the means of inducing that distinguished company to treat the works of art confided to them a little more carefully. It had been stated that the Painter-Stainers' Company had been the first in the movement of promoting competition of the character under discussion this evening. He, however, believed it was the Loriners' Company to which that honour belonged. Unfortunately, however, the effort was discontinued, in consequence of a feeling on the part of some of the members of that guild that the funds ought not to be diverted to the rewarding of persons outside their own pale.

Mr. P. L. Simmonds cordially approved of the suggestion of Mr. Davenport, that raw materials of commerce should be deposited with the Society, for the purpose of scientific examination and report. There was at present no convenient public place of deposit where such articles could be seen and examined. He knew many new oil-seeds, fibres, gums, paper materials, &c., were received by brokers and merchants in this great commercial port from time to time, which were either entirely overlooked or but little appreciated, and yet many of these might become most important for manufacturing use.

Mr. Philip Palmer said the object of the co-operation of the City companies had been introduced by him at the first meeting of the session. He would follow up what he then said by adding, that, in the observations he submitted, he did not mean that companies should institute separate competitions or separate exhibitions, but that they should render their assistance to the competitions of this Society. In this respect he apprehended there would be no great difficulty in obtaining the co-operation of such companies:

for instance, the Mercers' Company might contribute prizes in connexion with textile fabrics; the Grocers' Company might render their assistance in the matter of colonial productions, as suggested by the observations of the last speaker; the Spectacle-makers' operations might, he apprehended, be extended to the whole range of optical instruments. He agreed with Mr. Godwin that it would be a great advantage to all branches of trade that a proper apprenticeship system should be established.

Mr. Joseph Ash stated his belief that the small exhibition of wood carvings at the Architectural Museum, alluded to by Mr. Godwin, arose from the almost entire absence of practical working men in the Council of that Institution, who acted as the adjudicators of the prizes. He thought it of the utmost importance that the competitors in such competitions as these should have confidence that the merits of their works would be decided by a competent tribunal of practical men.

Mr. George Lock claimed to be the originator of the scheme for prizes in wood-carving which had called forth the present competition in that department; and he begged permission to say a few words on points which had been suggested by this and the preceding display. He agreed with the last speaker, that the paucity of specimens at the exhibition of the Architectural Museum was in a great measure due to the cause which had just been pointed out; and he suggested that in these exhibitions it should be a condition, that the jurors appointed to decide on the merits of the competitors should include a fair proportion of practical men in each branch of the subjects. He felt if that were not done these competitions would suffer. With respect to the subjects selected by the council for the wood carvings, he believed there were no cause for complaint, inasmuch as in addition to the models and photographs issued, there was in the programme this year a series of prizes offered for original works in wood carving, no design or model being prescribed. Complaint had been made on the part of a few employers, who were not themselves art-workmen, with regard to the indefinite period for which the articles were required to be left in charge of the Society. Some tradesmen considered it an inconvenience to lose a portion of their stock for a lengthened period, and he thought it a matter worthy of consideration previously to the next competition. Another point he would suggest was a more extended publicity being given to these competitions; and with that view he suggested that they should be advertised in those newspapers which were mostly read by working men. The mere announcement in the Society's *Journal* was not sufficient, as that publication was not seen by working men. He had been told by one of the promoters of the North London Exhibition, that not one of the fifty persons who acted with him had heard of this intended competition. He concurred in the suggestion that the competitors should to a certain extent be consulted as to the subjects which should be selected as models on which they should exercise their skill. Mr. Lock then alluded to the proceedings of the Society in respect of its competition of a similar character to this in the latter part of the preceding century, when the sculptors Banks, Nollekens, and Bacon were among those receiving rewards. The last-mentioned artist succeeded in carrying off several valuable prizes, and the advantage of the system to him in after-life was acknowledged in a letter to the then Council of the Society.* In conclusion, Mr. Lock expressed a hope that the Council would consider the desirability of exhibiting ancient works of art in connexion with this display of the articles sent in competition for prizes. He believed that such a course would give additional interest, and would be of great value to the competitors and art-workmen generally.

Mr. H. Hale said one reason why the response on the part of the wood-carvers had not been more extensive was to be found in the fact that that class of workmen had been so much occupied by the pressure of business of their employers during the last year, that they had no leisure to prepare objects for this exhibition.

The Chairman said, the time having arrived for closing the discussion, he thought Mr. Davenport might congratulate himself on his paper having elicited one of the best and most useful discussions of the session. There were, however, one or two observations, especially those of Mr. Lock, which required some notice from him as Chairman of the Council. Mr. Lock had stated that complaints had been made in some quarters of the length of time the specimens were kept in the Society's charge, and that whilst such specimens were kept out of stock they might become unsaleable. Now, with regard to articles taken out of a tradesman's stock, if that were known to be the case they would not be admitted to competition, for it was not the object of the Society in these competitions that persons should compete who were able to keep works in stock, and employ others to do the work. The great object was to do for the art-workman in his special handicraft that which had already been done in another direction in testing the knowledge of candidates by the examinations instituted by the Society. The Society sought to stimulate the art-workman by giving opportunities for testing his skill, and by placing before him models and photographs of the best examples in each branch of industrial art. With respect to the character of the subjects and the conditions of the competition, he might state that out of the ninety-eight articles sent in, thirty-four were in connexion with that division of the programme in which no restriction was laid down as to choice of subject, and for which no examples were prescribed. The competitors were free to do that which they thought best suited to their individual talents and powers. He could not help alluding to the beautiful carving of the head of a child behind him, in illustration of this statement. No model or photograph was furnished for that beautiful work. Having referred to some other works exhibited, the Chairman went on to remark upon the co-operation of the City companies in this work. He said it was a difficult but an interesting question. Taking the twelve leading companies in their order of seniority—the Mercers and Drapers might be asked to offer prizes for the finest productions of the loom in all the branches of textile fabrics. Again, the Fishmongers' Company might be brought into the field. The most beautiful of old china was replete with forms of animals in all sorts of relief. That company might offer prizes for the best designs in earthenware or china exhibiting the best drawings of the denizens of the seas and rivers of this country. Of the Goldsmiths' Company he need say no more, now that it was to be hoped that, instead of converting watch-cases into cocked hats, they would test the quality of the gold, and allow the beautiful work of the lathe or the tool to be returned to the owner uninjured, and offer prizes for the best specimens of chasing or of ornamental jewelry. The Vintners' Company, again, might, in like manner, do their share in this good work, and encourage the artistic embellishment of metal-work, by offering prizes for ornamental designs, in which the beautiful stem, leaves, and tendrils of the vine might be most elegantly introduced, and with which many of the most beautiful ancient bronzes were ornamented. In this way something might be done by the great majority of the City companies; but it could only be effected by great attention and labour on the part of the Council, and whether they would have time to enter upon it during this year he could not at present say. Another observation required remark, viz., that relating to want of sufficient publicity being given to the rewards offered by the Society. He believed Mr. Lock did not know what had been done by the Council, who had distributed bills containing their programme very freely among the principal workshops; and to prove that the workmen were aware of the competition, he would state that nearly 600 copies of the photographs and engravings had been bought by the workmen at the Society's house; and further, with respect to the insufficiency of the time allowed, he would add that the notices were issued in February for works to be delivered here in the November following. Then, with respect to the time the articles were delivered, and the period which elapsed between the exhibition and the adjudication of the prizes last year, he must say that the works were not sent in till June, and they could not name a day for the distribution of the prizes until the Prince of Wales became the president, and appointed a day for that purpose; and he believed the recipients of the awards were more gratified at the honour of receiving them from the hands of his Royal Highness, than disappointed on account of the time they had to wait for them. On the point referred to by Mr. Godwin, who spoke from his own knowledge, which was very extensive, that the workmen of the present day were not as a class equal in skill to those of seventy or eighty years ago, he thought that remark required some qualification. They might not be able to get plasterers to do the splendid work which they saw in some of the old city halls. It was a description of work not executed now, because the most beautiful forms of ornamentation were produced more quickly, and they could not afford the time for it. But if they tested the skill of the workmen as a whole,—in the precious metals, in plate, in china painting, or the works of the loom, they knew that the French artists had expressed their surprise at the wonderful progress made in this country.

Mr. Godwin said the remark he had made applied merely to building operatives.

The Chairman said, then he would carry his remarks no further, but he would ask the meeting to thank Mr. Davenport for his very interesting paper, and to congratulate him on the interesting discussion which had followed the reading of that paper.

The vote of thanks having been passed,

Mr. Davenport, in acknowledging the vote of thanks said, in reply to the observations made by Mr. Cole and Mr. Blaine, that the idea which he intended to express was this:—If art, manufactures, and literature are beneficially promoted by the protection which the Government of the country gives to the author, the artist, the designer, the manufacturer, and the mechanic, by means of the copyright laws, the Registration of Designs Act, and the patent laws,—in each of which cases, where a monopoly is granted, a copy of the design or specification of the article to be protected is deposited for the information of the public in some duly appointed repository,—might not the Government, with equal justice and advantage, be asked to give to the person who discovered, in a foreign country, products fitted for and applicable to industries, be enabled to obtain a right of import from such country of the product which he had discovered, and of which he was the first and the true importer; and in consideration of such right being granted he might be required to deposit samples of the product, which could be deposited in a national trade museum.

THE BOARD OF TRADE *v.* LLOYD'S PROVING HOUSE, AT POPLAR.

It was only a short time ago that a serious accident took place on Ludgate-hill, through the giving way of one of the chains used in hoisting a girder. The insecurity of, and yet necessity for, chains are fully understood by practical men, who would thus look with satisfaction on an extension of the Bill passed last session for testing the chain-cable of ships, to all kinds of chain. Of course the *sine qua non* of any operation of the kind is accuracy, and we thus inserted a communication some time ago, from Mr. F. A. Paget, C.E., on the forms of testing machines necessary for the attainment of such accuracy. We understood that the Government regulations for the many different testing machines now being established throughout the country, carry out the opinions this gentlemen publicly expressed some eight months ago, and before the Bill was carried; and he has also been requested by the Board of Trade to report on the Government requirements, in company with Sir W. G. Armstrong, Mr. W. Fairbairn, Mr. John Penn, and Mr. Hick, of Bolton. One of the most unfortunately constructed machines has been found to be that of Lloyd's, at Poplar. Not merely is the pull of the hydraulic press wrongly measured, but the chains were tested *after* having been painted, and they are also tested in such enormous lengths as 75 fathoms, or 450 ft. Lloyd's Committee have given way upon the two first points, but upon the third they appear to intend to make a stand. We have been given to understand that the engineer of Lloyd's has made a report which disagrees with

* The following is a copy of the letter sent by Bacon to the Society, on presenting his original statues of Mars and Venus to that body, both being life-size:—

"Session 1769-70.

The honour you have done me in your acceptance of my statues of Mars and Venus affords me an opportunity, which I gladly embrace, of acknowledging the many obligations I owe to the Society.

It was your approbation which stimulated, and your encouragement which enabled me to pursue, those studies which a disadvantageous situation had otherwise made difficult, if not impossible. Believe me, gentlemen, I never think of the Society without gratitude, and without the highest idea of the principles on which it is formed, and which justly place it among the institutions that do honour to human nature, raise the glory of a nation, and promote the general good of mankind."

He had shortly before received the gold medal of the Society, and from Reynolds the first gold medal the Royal Academy awarded for sculpture.

that of the Inspectors of the Board of Trade in respect to testing such long lengths as 75 fathoms. This report has been sent to the Board of Trade, accompanied by a letter from Lloyd's Committee, requesting the Board of Trade to appoint two other engineers to examine the question. We understand, however, that Government have refused to alter their published regulations, as they state that their requirements have only been settled after taking the best advice. The Board of Trade, however, offer to refer the report of Lloyd's engineer to the same engineers who have previously been consulted on the question, viz., Sir W. G. Armstrong, Mr. W. Fairbairn, Mr. J. Penn, Mr. J. Hick, and Mr. F. A. Paget. We greatly regret to see Lloyd's in collision with the Board of Trade, but we hope that, in this case also, the spark of truth will be elicited from the shock of discussion.

PARIS.

Two new Jewish synagogues are to be erected in Paris; the two already existing in the Rue de Lamartine and in the Rue Notre Dame de Nazareth having been found inadequate to accommodate the Israelites in the town. The new buildings are to stand, one in the Rue de la Victoire, another in the populous quarter of the Marais, in the Place Royale, on the site of the ancient Mairie of the eighth arrondissement. This ancient hotel was formerly the residence of many illustrious personages, the last being the Baron de Breteuil, Ministre de la Maison of Louis XVI., and Laurent de Villedeuil, Intendant-général of Rouen. The town council of Paris has consented to furnish half the sum necessary for these new places of worship on condition that the community interested furnish the other half. This having been subscribed at a public meeting, held the 13th instant, it is expected that the works will begin in April next.

New abattoirs are being erected at La Villette; and a cattle-market, replacing those of Sceaux and Poissy, is to be annexed to it. A decree of the 11th inst. authorizes the town of Paris to contract for the building of a new cattle-market in the nineteenth arrondissement, and to connect it, by a branch line, with the circular railway. The market is to be held for a tenure of fifty years.

In order to commemorate the heroic defence of Paris in 1814, by Maréchal Moncey, the municipal authorities have determined to erect a monument at the ancient Barrière de Clichy. Several distinguished sculptors, including Cavelier, Clagmann, Aimé Millet, Vital de Bray, and Maillet, have been appealed to in order to represent in marble or stone the episode.

By command of the Emperor of the French, on the 16th inst., the Minister of Public Instruction received, at the Imperial Library, from the hands of M. Léon Duval, the heart of Voltaire, inclosed in a gilt metal case bearing these words: "The heart of Voltaire, deceased in Paris XXX May MDCCLXXVIII." It will remain for the present in the department of the medals, until the works are completed of the department of manuscripts and printed works, where it will be placed in conjunction with the statue of Voltaire, by Houdon, and the complete collection of his medals, correspondence, manuscripts, and printed works.

THE CIRCULAR RAILWAY OF PARIS.

The adjudication of the section of the circular railway of Paris, from the Javel Viaduct to the Route de Châtillon, a length of 2 miles 1,700 yards, on the left bank (south) of the Seine, took place on the 26th. The line, traversing the Seine by the double bridge of Point-du-Jour, continues on a viaduct, after having crossed the Quai de Javel by a stone arch, 65 ft. 7½ in. span. After continuing for 50 or 60 yards, the viaduct ends on an embankment of a height varying from 20 ft. to 33 ft. Opposite the Porte de Sèvres, a bridge 39 ft. 4 in. span, under the line, is to serve for the communication between Issy and Grenelle. Here will be a passenger station, and farther on a goods shed. At the extremity of the Rue de Sèvres there is another arch of 39 ft. 4 in. under the rail, and for the passage of the Rue Notre Dame three arches will be left in the embankment, each 32 ft. 10 in. high, the centre one being of 65 ft. 7½ in. span. Between the Rue du Hameau and the Grande Rue de Vaugirard the line is carried on a viaduct of fourteen arches, twelve of which are of 29 ft. 6 in. span, one of 45 ft. 11 in. for the Rue du Hameau, and one of 62 ft. 4 in. over the Rue de Vaugirard. Beyond this, the ground rising abruptly, the line enters into cutting as far as the Rue de la Poterne, and between these points the Vaugirard Station is to be established. A little before arriving at the Rue de la Poterne the first tunnel of this section commences, and, in length, 357½ yards, is continued through ancient quarries, thus presenting extraordinary difficulties. The masonry, to support the line through these caverns, is to consist of massive piers built up from the solid rock, and united by arches. Under the Impasse des Péricheux, these piers will have to be carried up through two stages or floors of quarries, in order to give the necessary basis for the railway, the intervening floors not being sufficiently solid to bear the weight. Beyond the tunnel the railway will continue in cutting across the plateau of Plaisance. The Rue Turbigo will cross the cutting by a bridge, 39 ft. 4 in. wide, and 59 ft. span. Here a loop siding will effect a junction with the Chemin de Fer de l'Ouest, which passes over that described above, on a viaduct, and the stations of the two lines will be placed in immediate correspondence. Farther on the circular railway is crossed by the Rues de Vanves and Des Plantes, and at the Rue de Chatillon it will join into the rest of the line now in course of construction.

THE NEW ANATOMICAL MUSEUM IN BERLIN.

Owing to the great increase in the number of medical students at the University of Berlin, and also because the anatomical curiosities have multiplied much of late years, a new and large museum, that should combine accommodation both for the exhibition and for the study of anatomical objects, became a real necessity. On the occasion of the fiftieth anniversary of the Frederick William University, on October 15th, 1860, the King, at that time Prince Regent, promised them this new building, at the same time granting them a site in the park of the Royal Veterinary College. Mr. Albert Cremer, architect, was commissioned to prepare the plans, and the building was forthwith commenced. It consists, in the main, of a front and two wings, at right angles, and in advance of the centre. The hollow of this square faces the south; whilst the theatre and preparing-rooms are at the back, thus receiving a north light. The centre block contains hall, vestibule, cloak-room, porter's room, a large dissecting-room, and a flight of stairs leading to the first-floor, which contains the auditorium, or theatre. The right wing contains examination and work rooms, and stores of chemicals on the ground-floor; and collections of chemical and physical objects on the first-floor. The left wing is one large dissecting-room on the ground-floor, the ceiling of which is carried by ten cast-iron columns supporting a groined brick vaulting. Over this is the exhibition of dry specimens. Besides these, there are also microscopical work-rooms, apartments for the director and the operators, &c. The basement is arranged as dead-rooms, ice, wood, and coal-cellars, sculleries, washhouses, &c. Every resource which would assist in the proper ventilation and cleanliness of a building of this kind has been applied. All the walls and ceilings of the dissecting-rooms are painted in oil; whilst the floors are asphalted and laid to falls for carrying off the water, which is laid on in every room; and thus a hose fixed to the hydrant will thoroughly cleanse all surfaces likely to become infected. Subjects will be raised from the basement to the upper stories by means of an hydraulic lift, to be worked by the Berlin Waterworks Company, known here as the "Englische Compagnie." The character and style of this building are plain and unpretending; but the internal arrangement contains much, especially in a sanitary point of view, that might be adopted by us with advantage in the erection of our hospitals and asylums.

Early Masonic Remains.—In a report of the Tin Hill Mine, St. Anstell, Cornwall, furnished by an agent, to the *Mining Journal*, he announces the discovery of a stone coffin, or walled grave, in the form of a coffin, about 7 ft. long, 20 in. deep, 15 in. wide at the end, and 2 ft. 6 in. at the breast. In the coffin there are about four gallons of ashes and a few cinders, and in the ashes he found a seal of yellow metal, in good preservation, with the Masonic arms engraved in the stone.

THE NEW "GLOBE" OFFICE, TORONTO, CANADA.

The original plan of this building, which has been erected as a testimonial to the Hon. George Brown, by his political friends, was drawn by Mr. Alfred Brunel, but the architect is Mr. Kauffman, who completed the design and carried on the works. Mr. Kauffman, who was educated in the profession on the continent of Europe, has, during a lengthened residence in Canada, had great experience in the erection of large edifices of various kinds. In the construction of the *Globe* Office, white pressed brick and Ohio stone have been used. It has a frontage on King-street, the main thoroughfare of the city, of 34 ft., and is three stories high. In style it is modern, and adapted to the necessities of the climate. On the ground-floor is the publishing office. Entrance is gained to it by a door on the right-hand side. On the opposite side, its counterpart, is another door, at the foot of the main staircase. Between the doors are two large arched windows, of plate-glass. They are surrounded with stone-work, and rest upon a panelled soffit of the same material. The second story is lighted by a large arched window, divided into three compartments, reaching to the floor, and two of smaller dimensions are on each side. From the centre window admission is gained to a stone balcony, with sculptured front. The third story is lighted by five semicircular windows, also arched, and, like all the rest in the front, corbelled, and resting upon a strong course of stone. The slanting roof is furnished with a cornice, semicircular in the centre, on the highest point of which is a globe, from which springs a flagstaff. The cornices of the whole building are of galvanized iron, bracketed. The contractors for the excavation, mason, cut-stone, brick, and plaster work, was Mr. James Worthington; for the carpenter's, joiner's, roofer's, painter's and glazier's, tinsmith's, and smith and founder's work, Mr. John Plenderleith; for the plumbing, Messrs. Cumming & Wells; for the gas-fitting, Mr. Ritchie; for the steam-heating, Mr. D. S. Keith; for the office furniture, Messrs. Jacques & Hay. The sub-contractors were,—Mr. Gibson, for the plastering; Mr. Ringham, for the galvanized iron and tinsmith work; Mr. Forbes, for the roofing; Mr. Labor, for the smith and founder's work; Mr. Thompson, for the painting and glazing; Mr. Gatshore, of Dundas Foundry, the boiler; and Hamilton & Son, of Toronto, built the engine.

COMPETITIONS.

I propose a question vital to the profession. Can anything be done to stop the present system—I had almost said disgraceful system—of competitions? My own idea is, that no good can be done until the profession, *as a body*, resolve upon united action. It is quite in vain for one or two individual members now and then to throw into the gap, as it were, a sand-bag or two, to be swept away by the torrent; and so the breach daily widens, and eventually all the best interests of the profession will be swept away.

Nothing short of a long, strong, pull-altogether will ever do any real service. Weekly the tempting advertisements appear, and, sure enough, there are ever found those who are willing to compete for *the chance of a premium*, which, were they certain of it, would not represent what they should honestly have for their labour. They still compete, and take no warning by the fate of those disappointed ones who rush to the pages of the *Builder* with their grievous story of insult and injury sustained in the battle of competition. Who can estimate the money value of the brain-labour thus annually wasted? Unless something definite be done, the competition mania will become so general that a *bonâ-fide* private commission for any important work will be quite a rarity, and confined to a very select and favoured few.

Personally, I have no objection to fair, honestly-conducted competition within proper limits. I am not complaining of injustice done to myself; for, although I have practised some years, and have executed many public and private works, I never yet engaged in a competition, so that I am not writing under the smart of defeat; but I do really feel for the position of those who may come after me, when the profession shall have degenerated into a mere selfish race for a most unworthy prize. What will be the professional *studies* when any boy, now educating and training

for it, shall enter upon the race? If he can obtain honourable and remunerative employment by industry and skill, well; but if he is to work his brain in the toilsome task of preparing drawings whose merit is to be judged by a green-grocer or a tailor, alas! alas! it were better for me now to turn the current of his thoughts into the commercial channel, where one-half the effort will more surely produce a tenfold chance of competency.

As I before stated, it rests entirely with the members themselves to prevent the ruin of their calling. Will the *heads* of the profession help us? I fear, perchance, that they will be immovable, and not care for their shivering brethren, whilst they themselves can say, "Aha! *I* am warm." But this should not be so, for in time, if the value of professional services is to continue to degenerate, it will at last reach even the heads themselves, and there will be no sound part in the whole body.

Now, to be practical. I beg, with much deference to the opinion of others, to suggest one fundamental rule to guide us in all competitions; that is, that we enter upon no such unless it be guaranteed that the successful competitor shall be employed to carry out the work at the usual and customary commission of 5 per cent. If the brethren of our craft would adhere to this simple rule, we should soon weed out a great lot of most thankless and sham *jobs* offered to our notice; and, in announcing the name of any successful competitor, it should at the same time be distinctly stated whether this condition was complied with, so that we should know who are the persons who are willing to give their services for such unworthy reward as a mere premium only. If this could be done a great point would be gained, and we should not hear quite so much of architects' plans being *amended* and carried out by local builders, nor should we have to lament the acceptance of such wretched terms as some members of the profession, who, having the hope of a commission within their grasp, in their eagerness to "clutch it" (yes; "clutch it," that's the word), forget everything that is due to themselves, and to the profession to which they belong.

Our noble art ought to beget and keep alive in us nobility of soul; and while we run we ought to keep our heads well up, nor stoop to any mean or tarnished prize. J. B.

ANNUAL GENERAL MEETING OF THE INSTITUTION OF CIVIL ENGINEERS.

THE General Meeting was held December 20, Mr. John Fowler, V.P., in the chair. In presenting an account of the proceedings during the past twelve months, the Council reported, that the characteristic feature of steady progressive development was never more fully exemplified in any similar period since the first establishment of the Institution. The meetings had proved very attractive, the discussions had been well sustained, the library was fast becoming rich in all professional and scientific works of this and other countries, the number of members and associates had greatly increased, and the financial condition was very satisfactory. The importance to engineers of being connected with the Institution was felt more and more every day; and although the time had not yet arrived, when it was considered imperative for every one practising the profession to have received the diploma of the Institution, yet in general opinion it might fairly be said, that that position had been attained. On these grounds, therefore, it was more than ever essential, that the qualifications of all candidates for admission should be most scrupulously examined; and that the members should satisfy themselves, before signing any proposition paper, that the person so recommended, possessed such character, practice, and experience, as to entitle him to the distinction he sought.

The tabular statement of the transfers, elections, deceases, and resignations, showed that the number of elections had been 93, of deceases 25, of resignations 6, and of erasures 7, leaving an effective increase of 55, and making the total number of members of all classes on the books on the 30th of November last, 1,095. This was an increase of nearly 5·3 per cent. in the past twelve months.

The abstract of the receipts and expenditure for the year ending the 30th of November last, as prepared by the auditors, showed that the payments during the twelve months had amounted to 2,955*l.* against the receipts from all sources of 4,414*l.*; and that the amount obtained from subscriptions and fees alone, without including the dividends upon investments and the sums derived from other sources, had exceeded the disbursements by about 150*l.*

The propriety of establishing a Benevolent Fund in connexion with the profession received the serious consideration of the Council. Private inquiries among a few of the members of the Institution having shown that such a fund, if properly managed and adequately supported, could not fail to be productive of immense good, it was determined to appeal to the general body, and the result had been such a response as fully to justify the course which had been pursued. Already from 224 contributors, donations to the amount of 21,884*l.*, and annual subscriptions to the extent of 487*l.* had been promised.

If the object of the profession of a civil engineer be, as described in the charter of incorporation of the Institution, "the art of directing the great sources of power in nature for the use and convenience of man," it might fairly be asked, what other profession played so large a part in developing the material resources of the world, and in facilitating the intercourse between nations which tended to promote peace and goodwill. It should then be the constant endeavour to make the Institution the depository of the accumulated knowledge of all the members; and all should strive so to sustain and consolidate the Institution, that it might continue truly and faithfully to represent the important interests committed to the care of the civil engineer.

After the reading of the Report, a Telford Medal and a Telford Premium of Books were presented to Mr. W. Lloyd; a Telford Medal to M. Pernolet; a Telford Medal and the Manby Premium, in Books, to Mr. G. H. Phipps; Telford Premiums of Books to Messrs. J. D. Redman, W. Parkes, T. Sopwith, jun., J. M. Heppel, and G. R. Burnell; and Watt Medals to Messrs. T. Sopwith, jun., W. Bridges Adams, and J. Cross.

The following gentlemen were elected to fill the several offices on the Council for the ensuing year:—John F. M'Clean, President; J. Fowler, C. H. Gregory, T. Hawksley, and J. S. Russell, Vice-Presidents: Sir William Armstrong, W. H. Barlow, N. Beardmore, J. Cubitt, T. E. Harrison, G. W. Hemans, J. Murray, G. R. Stephenson, C. Vignoles, and J. Whitworth, Members; and John Aird, jun., and A. Ogilvie, Associates.

HEAD-QUARTERS OF 1st SURREY RIFLES.

THE foundation-stone of the head-quarters of the 1st Surrey Rifle Corps has been laid by Col. M'Murdo, in presence of a large concourse of spectators, in the Brunswick-road, Camberwell New-road. The present head-quarters of the corps, at Hanover Park, Peckham, are to be destroyed by the London, Chatham, and Dover Railway Company. Four acres of ground having been secured in the Brunswick-road, not far from Camberwell Park, Mr. J. T. Lepard, of the Adelphi, honorary architect, and an officer of the regiment, prepared the plans and specifications of the various buildings necessary, and under his direction they will be erected. The head-quarters will contain "mess-rooms," for refreshment, &c., an armoury, lavatories for the use of the men after cartridge practice, and dress-rooms. They will also contain a residence for the sergeant-major and canteen-keeper, officers' quarters, and committee-rooms. In the same building a concert-room, 66 ft. long by 25 ft. broad, will form a hall of reception for friends of the corps. The drill-shed is to be 150 ft. in length by 50 ft. in breadth. A gallery for visitors will be constructed at one end, accessible from the main building, and so arranged as to afford a view of the parades, whether in or out of doors. The buildings will be of coloured brick, with stone facings. The estimated cost is 5,000*l.* Mr. W. Winder is the contractor.

THE BRADFIELD DAM, SHEFFIELD.

MESSRS. SIMPSON, Hawksley, Bateman, Fowler, and Harrison, the engineers appointed by the water company, dissent from the opinion of Mr. Rawlinson and Mr. Beardmore as to the cause which led to the rupture of the embankment. They state that there was no fracture of the pipes, and that the embankment was composed of materials which would not have slipped if the base on which it rested had been immovable. They say:—"After a full consideration of the collateral circumstances, we are unanimously of opinion that the accident was occasioned by a landslip, which occurred in the ground immediately on the east side of the embankment, and which extended beneath a portion of its outer slope, involving in its consequences the ruin of that portion of the bank, and producing the catastrophe which followed." The document is prefaced by a correspondence with the Home Office, in regard to the resumption of work on the Agden Reservoir, which was stopped by the directors immediately after the accident at Bradfield. The reply from the Home Office says:—"Sir George Grey does not see what additional information could be obtained by a further investigation made at the instance of the Government. The directors, with this information in their possession, having now decided, as you inform Sir G. Grey, that they are justified in proceeding with the Agden Embankment, Sir George Grey can only remind them that he has no power to interfere with their decision; and that if the works are proceeded with it must be upon the undivided responsibility of the company, and without any sanction, expressed or implied, on the part of her Majesty's Government."

"ACOUSTIC" POTTERY.

BENIORD CHURCH, NORTHAMPTONSHIRE.

WE mentioned recently the completion of various works in this church, executed under the superintendence of Messrs. Wadmore & Baker, architects. In repairing the church some curious "acoustic" pottery was discovered over the sedilia in the north side of the chancel, one of the vases being nearly perfect, and the forms of others to be clearly traced in the mortar in which they had been bedded. They are about 8 ft. above the level of the pavement, and are formed of unglazed pottery, about 9 in. deep, 6½ in. diameter at the mouth, 10½ in. in the middle, and 9 in. at the bottom. They appear to have been perfect until about fifteen years since, when they were removed or broken, and the openings filled up by a local builder, and covered with stucco. No traces of pottery could be discovered over the sedilia on the south side, but the masonry had evidently been disturbed,—a window of more recent date introduced, partially occupying the space. As an interesting archæological discovery, it was considered not desirable to re-stucco the walls; the joints of the masonry have, therefore, been pointed, and the pottery is left in the state in which it was found. We have engraved a representation of the appearance it presents, from a drawing obligingly made for us by Messrs. Wadmore & Baker.

DESIGN FOR A LABOURER'S COTTAGE.

IT will be remembered that premiums presented by Mr. Bailey Denton were offered by the Society of Arts, for the best design for a labourer's cottage, under certain conditions. One premium was offered to all comers, and a second to the members of the Architectural Association. To those sent in by the latter body no premium was awarded. From amongst the designs sent in by the general public, the premium was awarded to one by Mr. John Birch, of which we present illustrations, including elevations, plans, and sections. These will fully explain the arrangement. The plan, we may say, shows on the right-hand side the ground-floor, and on the left-hand side the chamber floor.

We take from the specification some passages which explain the designer's intentions:—

The several walls are built with good, sound, hard, kiln-burnt, stock bricks. The roofs are covered with countess slating, or well-burnt plain tiles laid to close gauge. The gutter and flushings to chimney, &c., of lead. All the timber to be of the best Dantzic, Riga, or Memel fir; the battens of the best St. Petersburg. All the internal finishings (excepting ground-floor), to be of best white deal, carefully selected, free from knots, &c., and thoroughly dry.

With respect to the scantlings and construction generally, the memorandum of the Inclosure Commissioners (as applied by them to agricultural buildings under the several Improvement Acts), has been adhered to.

The estimated cost of the pair of cottages is 203*l.*, which includes the buildings, well, drains, cesspool, tanks, &c., fixtures and fittings, and every requisite necessary to render them complete and fit for occupation.

Should any of our readers carry the design into execution, we shall be glad to hear how this estimate is borne out.

LABOURERS' COTTAGES.

DESIGN BY MR. JOHN BIRCH TO WHICH PRIZE WAS AWARDED BY THE SOCIETY OF ARTS.

MONUMENT TO VISCOUNTESS CANNING: CALCUTTA.

MR. G. G. SCOTT, ARCHITECT. MR. PHILIP, SCULPTOR.

MONUMENT TO VISCOUNTESS CANNING.

THE monument to the Viscountess Canning, of which we give a representation, will shortly be despatched to Calcutta, where it will be placed over the square mound which now marks the spot where the remains of the deceased lady repose, in the garden of the Government House.

The monument is entirely of Sicilian marble, inlaid with various other marbles, in geometric forms, upon the flat of the body of the tomb, where are also inlaid the arms of the Canning and Stuart de Rothesay families. Around the edge of this part of the tomb is a sort of cable pattern. The sides are ornamented with pateræ, five at each end, and nine on each side. Upon the centre of this base or body, is a ledger, richly moulded on the edge, in foliated pattern, delicately rendered; upon this is a *dos d'ane* shaped slab, having a cross,—along the middle, inlaid also, -and bearing below the arms a Viscountess's coronet and shield. The edge of this slab carries in letters of gold the following inscription:—"Sacred to the memory of Charlotte Elizabeth, eldest daughter of Lord Stuart de Rothesay, born at Paris, 31st March, 1817; died at Calcutta, 18th November, 1861; wife of Charles John Viscount and Earl Canning, first Viceroy of India." From the head of this slab rises a handsome headstone, capped with a cross. The sides of this stone are decorated with a twisted column, and the back is rich with ornament. The height is about 15 ft., of the base nearly 4 ft. The length is 15 ft., and breadth about 9 ft. The design was by Mr. G. G. Scott: the sculptor was Mr. J. B. Philip.

The epitaph is as follows:—

"Honours and praises written on a tomb are at best a vain glory, but that her charity, humility, meekness, and watchful faith in her Saviour will, for that Saviour's sake, be accepted of God, and be to her a glory everlasting, is the firm trust of those who knew her best, and most dearly loved her in life, and who cherish the memory of her

Departed.
The above words were written,
November 22, 1861,
BY EARL CANNING,
Who survived his
Wife but seven
months.

He left India on the 18th March, died in London on the 17th June, and was buried in Westminster Abbey, on the 21st June, 1862."

"ACOUSTIC" POTTERY IN DENFORD CHURCH, NORTHAMPTONSHIRE.

MOSAICS FOR EXTERNAL DECORATION.

Every one interested in the subject of coloured mosaics for external decoration would be glad to read the letter of Dr. Salviati in your journal. I venture to think that we only differ in technical terms. I recommended glass mosaic to be used for external decoration. By that term Dr. Salviati evidently supposed me to mean thick pieces of ordinary coloured glass, which, when set in a wall, have a semi-transparent effect. Nothing was further from my mind when I used the term glass mosaic. I meant what he evidently means by his term "glass enamel"—pieces of coloured opaque glass, such as was used by the ancients. I believe that the term "glass mosaic" is generally used in England to express this opaque material, and the term "glass tesseræ" to express the semi-transparent material. This latter, in my opinion, is unworthy the artist's consideration.

Dr. Salviati has also referred to that part of my letter which recommends the use of pieces averaging two square inches for figure subjects, and he says that supposing the mosaic to be the representative of the picture, we should not have pieces of this size, for the reason that there are not two square inches of one continuous tint in the human body, and the pieces alluded to, if used at all, must have one tint throughout. This argument is entirely founded on the supposition that the mosaic is the representative of the picture. But should the mosaic be the representative of the picture? I have the strongest conviction that it should not; and I now beg to offer my reasons for this conviction. If my reasoning be wrong, I sincerely hope to be corrected.

It will, I suppose, be generally admitted that the whole of that art we denominate the Beautiful may be divided into two arts, viz., creative art and imitative art. Any art which is not a direct representation of Nature we call (for want of a better word) creative; and any art which represents Nature as we naturally see her, we call imitative. The primary object of the mosaic art evidently is to beautify a surface; and the question is, should that surface be beautified by the direct or indirect copying of Nature?

One essential feature of imitative, or what for the beautifying of a surface we generally term pictorial art, is, that the surface upon which we work always becomes lost; and one essential feature of creative art is, that the surface is always maintained.

The delicate handling of the painter's brush, and his infinite variety of tints and shades, render him capable of representing Nature in a most faithful manner, and cause him to convey an idea to the mind of the beholder that he is not looking on a flat surface, however truly he may know that he is. The innumerable tints of the human flesh the painter can softly melt into each other, as in Nature; and not a harsh line is to be seen in the whole composition. The mosaic picture, on the contrary, is crowded with harsh lines, because every tint is distinctly separated from every other tint. What is the result of this? That the surface on which we are looking is not lost; yet, because the subject is treated pictorially in light and shade, with its lines of perspective, the surface is not wholly maintained. The art is neither purely imitative nor purely creative, but something between the two. Everything is done to convey to the mind of the beholder that the work is a representation of delicate, lovely nature; and yet the harsh lines scattered throughout will ever take away that pleasing idea. The consequence is, that the work must fail to satisfy.

But the mosaic artist who believes in pictorial representation may go further than this, and appear to answer our objection about the harsh lines in a conclusive manner. He may say,—"I can do away with these harsh cement lines, by bringing the different mosaic pieces into such unison that the naked eye will not detect them." What is the result of this? That we no longer believe it is a mosaic, but a painting. This is the mosaic being the representative of the picture with a vengeance! How evident it is, and yet how slow persons are to see it, that when an art comes to this, it completely destroys itself. To the ordinary observer (and do we not work for ordinary observers?) the mosaic passes for a painting, and the mosaic artist gets no credit for his work; nor, indeed, does he deserve the credit, when our senses are so imposed upon.

The above argument holds good, not only in the mosaic art, but in many other arts at the present day, which seem to have for their object the committing of suicide, and the deception of the beholder. The Gobelins tapestry work is a striking instance of this; and so are those insipid paintings on glass which the Germans produce.

The treatment desirable for glass mosaic on walls is the same as for coloured glass in windows. The cement lines of opaque glass mosaic may be justly compared to the lead-lines of transparent glass mosaic. The German, who believes in pictorial art for glass, tries to hide these necessary lines, and, like the mosaic artist alluded to, may be successful in his attempt; but his art would appear the more absurd of the two, because, on account of the light shining through portions of his work, the surface cannot be lost as in a mosaic, and therefore he can never be wholly successful in his attempt at pictorial representation.

The only true way to get over the difficulty of harsh lines in both of these arts is to do what our great Mediæval artists did,—honestly to acknowledge that the lines must exist, and to draw our subject conventionally, in order to allow for them. This conventional art is the basis of the work of most of our English glass-painters. There is, no doubt, a great difficulty in drawing well conventionally, living, as we do, in such a world of imitative art; but for that very reason everything should be done to encourage those who would study the conventional.

To return to the mosaic art. I think enough has been said to show reason why it should be treated in a conventional manner, and therefore why we may, as in transparent glass, use pieces of a large size, and paint on them. If the price of the work will admit of it, of course we should use pieces of the smallest size; only let us take care always to make the subject flat and conventional, and not round and natural.

J. T. Lyon.

SANITARY ARRANGEMENTS IN INDIA.

In your issue of the 21st of May, 1864, is a short communication signed by "Charles S. Hill," purporting to give data of the climate of India, as showing that the cause of defective sanitary arrangements in that country is not attributable to deficient water-supply; a deficiency to which, by the way, I did not allude, either directly or by inference, in my former letter, but to the defective supply provided for the Indian barracks as asserted and re-asserted by Miss Nightingale and other reliable authorities and reporters on the subject.

What, I would like to ask, are Mr. Hill's data worth? First, leaving out the incredible statements about Cherrapoonjee and "several other places," let us take Singapore, which, in the first place, is *not* in India, but in Siam, and is moreover situate on several islands; and islands, as a rule, are noted for the regularity of their rain-fall,—excepting Ascension, where no rain whatever falls. Then Bombay may be placed with Singapore, as it also is situate on islands; but what about the country around Bombay? Is it not an elevated table-land or mountainous district, which description of country is not a fair criterion of India in general? Then Calcutta is instanced, and the rain-fall is set down at 75 in. annually; whereas it is only found to have averaged 65 in. for six successive years. Let Mr. Hill take the following data into consideration, and then he will perhaps come to the conclusion that there really is a deficiency of water-supply in great portions of India. I will take an immense tract of land in the north of India; say the Punjab, Delhi, and Oude. In the Punjab, the average rain-fall during the years 1855-6 was 15·18 in. In Delhi the climate is characterized by aridity, and the district is supplied with water by a large aqueduct and by wells sunk to an immense depth. In Oude, the annual rain-fall is very irregular, varying from 70 in. to 30 in., extending over a period of from four to two months, after which, in September, the climate becomes unhealthy from the rapid exsiccation of the watercourses and marshes; while in the province of Sindh the annual fall of rain does not exceed 8 in. It is needless to pursue this subject further, but instances could be multiplied to show the great uncertainty of water-supply both in India and Australia. The climate of the northern provinces of India is not unlike that of many parts of Australia, comparing their meteorological observations.

Brisbane, Queensland.

THE SIZE OF GREAT CHURCHES.

Some letters in the *Times* and the *Builder* about two months ago, asserting the claims of various churches to be the largest or the longest, showed that there is great difficulty in obtaining accurate information on the subject; and any one who tries to get it will soon become still more sensible of the difficulty. Most local histories and architectural books, even those expressly on the cathedrals, abound more in epithets than figures: the figures that are given are often discordant, and, therefore, some of them necessarily wrong; and so many others are proved to be wrong in other ways, that it is impossible to know which to trust, except from authors of known accuracy, who have measured for themselves, and perhaps where they all agree. Printed plans in books are still less to be trusted without figures, as they frequently differ from known dimensions, and are sometimes scandalously wrong either by their own scale or any other you can invent for them.

I have, however, done my best to balance the evidence of the different books, and to get plans and measures of all our largest churches, sufficient to enable me to make out a comparative table of them, down to the size of the smallest cathedrals, and one below. If any other are entitled to a place in the list, I shall be thankful for plans of them, however rough, with accurate internal dimensions. It certainly includes all the very large ones, for the sake of which it was undertaken. And what was called the great London churches do not come near it: 8,000 ft. of area, or room for 1,000 people on the floor, seems to be quite their maximum. Having been enabled to make out the catalogue by the kindness of various clergymen, architects, and others, whom I have asked for information, I cannot do less than offer it to the public; and as nothing of the kind is to be found elsewhere, it can hardly fail to be interesting, if not useful, to the readers of the *Builder*. After what I said just now, it is almost needless to add that absolute accuracy is unattainable; and though I have no doubt the figures are substantially correct, I dare say some of them admit of still more correction.

The first column is the area inclosed within the walls, in square feet; and the second the greatest internal length in any one straight line, in feet. The measures are taken as usual (so far as I can secure it) above any plinths, and not on the floor only; and they include all towers, vestries, chapels, and other appendages, which are architecturally part of the church and open to it, or easily capable of being so. Thus the galilees of Durham and Ely are included, and Henry VII.'s Chapel as part of Westminster Abbey, and all similar projections, however low or narrow. Indeed, York and Lincoln alone, of all the churches down to Ripon, carry their full width and height through their entire length. Ely without its galilee, which is practically only a porch, shows the same unbroken length of body as Lincoln, and more than Winchester or Canterbury. The galilee gives it the greatest visible internal length of any, as that of Winchester is not visible from any one place.

I exclude porches and chapter-houses, with their approaches; and the Consistory Court of York Minster and the Lady chapel or Trinity Church of Ely, which is as distinct as any chapter-house; and, *à fortiori*, that of St. Alban's, which is still more cut off, and is a school; and the tower of St. Michael's, Coventry, which is not, and cannot be, open to the church. If those chapels and the chapter-houses were added, it would add 107 ft. to the length of St. Alban's, which already has the longest nave, 4,600 ft. to the area of Ely, 5,500 ft. to that of York, and proportionately less to the other fourteen cathedrals marked C, which still have complete chapter-houses, including Southwell Minster, whose chapter-house is just half the diameter of the York one.

The desire of everybody to make his church look as large as possible on paper, has led to the practice of comparing churches by what is called their area covered; and that is taken to mean all the space that would be bounded by a wall outside all the buttresses, which makes the area depend on the depth of buttresses, and sometimes includes several thousand feet of grass not covered by the church at all. This mode of measuring would give King's College Chapel and Amiens Cathedral credit for just as much area if the spaces between the buttresses were left outside, instead of being inclosed into the church. The importance of the distinction will appear from the two areas I give for King's;

and still more from this:—Cologne Cathedral has hitherto had credit for being the largest Northern Gothic church; whereas, in fact (according to Mr. Fergusson's plans and figures, which, he says, I may rely on), Cologne contains a rather less area than Amiens, and 4,500 ft. less than York. Old St. Paul's, according to the plan and scale in Dugdale (which falls far short of the dimensions recorded on an old tablet), contains one-eighth more than York, though it was 10 ft. narrower; but it was about 600 ft. long, and the transept 300 ft.; the nave vault is said to have been 100 ft. high, and the "new choir" (probably above the crypt and steps) 88 ft.

The third column is the general width across the nave and its aisles; of which Chichester, Manchester, Coventry, Kendal, and Taunton have four for the whole or part of their length, and Oxford to its choir, and Leeds three throughout. The nave and two first aisles of Chichester are only 63 ft. wide, which I mention with reference to the height. Boston, with its long chancel of 88 ft., and a few of the smaller churches, have no chancel aisles; but the choirs of the cathedral and abbey churches, and some others also, are so generally of the same width as the naves, that it is not worth while to distinguish them. The choir of Ripon is 19 ft. narrower than its wide unvaulted nave, and York 6 ft.; while those of Winchester and Canterbury are a little wider than their naves. With the single exception of Lincoln, the width of the nave and its two aisles in such churches is practically double that of the nave alone, measured between, not the faces, but the centres of the pillars. At Lincoln the clear width of the nave is half the entire width, which is the cause of that nave looking so low, though it is quite the full height according to the rule which I shall state presently. In unvaulted parish churches no rule is observed, either for the height of roofs or the width of aisles, except that, in all old cross churches, the choir or chancel is almost invariably the same height outside as the nave, and the transepts also, except where there has been some alteration of a clerestory.

The fourth column gives the height of all the nave vaults, and of some ceilings and open roofs besides. And it plainly shows what the real rule for height was, viz., that it was to be practically equal to the entire width. And as the clear width of the nave varies inversely with the thickness of the pillars, and sometimes a little more besides; it is also evident that the height bears no such definite relation to the clear width as has been sometimes looked for. It would have been better if it did, and if the height had been always twice and a half the clear width, as it is at Salisbury, Winchester, Canterbury, Norwich, Beverley, and Chichester, and was (or more) in Old St. Paul's. Of the first twenty-two churches in the list (putting the Gothic St. Paul's for the Italian) only Worcester and Lichfield, and in a less proportion Durham, fall materially short of the rule I have stated throughout their whole length. Westminster alone exceeds it greatly, being 103 ft. high. Of course choirs raised by steps are no real exception; and though the nave of York is certainly too low for its enormous width, yet the rule holds no less in that great choir, which is 100 ft. wide and 101 ft. high, than in the comparatively small vaults of Christ Church (Hants), Sherborne, and Redcliffe; and even in King's Chapel the height is exactly the same as the entire width, notwithstanding its peculiar construction and the vault being as wide as that of York, which is not of stone. The aisle vaults are generally half as high as the nave, except at Bristol, where they are all of the same height, as in the Temple Church. People not acquainted with architecture probably have no idea that stone vaults never rise higher than a flat wooden roof or ceiling, and indeed seldom quite so high.

The fifth column is the length of the transept, or the great or west transept where there are two, as at Lincoln, Salisbury, Durham, Canterbury, Worcester, Wells, Exeter, Beverley, Rochester, and Southwell. The only transepts with two aisles are York, Winchester, Ely, Wells, Beverley, Redcliffe, St. Paul's, old and new; and the small church of Patrington, in Yorkshire, which was built for vaulting; besides the north transept of Westminster and the south transept of Chester, which is strangely the longest of them all, though its north transept is very small. Beverley alone has a double-aisled great transept and a small one, with an eastern aisle besides. The others with eastern aisles are both the great and small transepts of Lincoln, Salisbury, Canterbury, Hereford, St. David's and St. Mary's, Beverley; and the great ones of Durham, Peterborough, Lichfield, and Ripon. None have west aisles only.

Bridlington is only the nave of a church on a larger scale generally than Beverley Minster, and about the same length. Bristol, Carlisle, Llandaff, and Hereford, have lost all or part of their naves, and Selby its south transept. I give them as they are.

The highest spires, &c., are Salisbury, 404 ft.; St. Paul's, 356 ft.; Coventry, 320 ft.; Norwich, 313 ft.; Louth, 294 ft.; Grantham, 274 ft. Chichester was 271 ft.; Newark not known accurately; Lichfield, 252 ft.; Wakefield, 247 ft.; Trinity Church, Coventry, 237 ft.; and several others (not of this list) are said to be about the same height. People will measure spires to the top of the weathercock; and so it is only fair to give them all so. Boston tower is 268 ft.; Lincoln, 262 ft.; Canterbury, 229 ft.; Gloucester, and the two of Westminster, 225 ft.; Ely and Durham, 215 ft.; the three of York, and the two west towers of Lincoln and Beverley are, and Worcester probably will be, about 200 ft.; the queer lantern of Newcastle, 192 ft.; All Saints', Derby, 180 ft.; Doncaster, 170 ft.; Wells, 165 ft.; Bath and Ludlow, 162 ft.; Taunton and St. Cuthbert's, Wells, 150 ft. I know of no others of that height; and it is not worth while to go lower or add further details.

THOROUGHFARES.

ALLOW me two suggestions, with a view to lessen obstructions in the streets of London.

1. As to Park-lane:—To continue either Park-street or South Audley street into Piccadilly. This would also have the advantage of opening and increasing the healthiness of May Fair.*

2. To take down, carefully, Temple Bar, and re-erect it, in its present form, on the south side of Fleet-street, where it might make one of the approaches to the Temple. This would preserve an old memorial, and leave it still, but more emphatically, Temple Bar. J. D.

* This has been suggested before, and is a desirable improvement; but, if effected, it would not supersede the necessity of widening Park-lane, or getting fresh approach to it westerly, as by Hamilton-place.—ED.

WARMING RAILWAY CARRIAGES.

TRIALS were made a few days ago, in Prussia, of a new method of warming railway carriages by steam. The boiler for the purpose is placed in the luggage-van, and the steam passes through tubes into wooden cylinders in the *coupé* of each carriage. Safety-valves are provided to carry off the excess of pressure, which is limited to $\frac{1}{4}$ of an atmosphere (about $3\frac{3}{4}$ lb.), and a lever is placed in the carriage, so that the temperature can be regulated according to the will of the occupants. The experiments, it is said, succeeded perfectly.

THE GENERAL BUILDERS' ASSOCIATION.

CARPENTERS' AND JOINERS' STRIKE.

SIR,—I shall be glad if you will permit the following to appear in your earliest impression, in order that the press and public at large may thoroughly understand the relative positions of masters and men in the Midland counties.

Before doing so, however, I must ask you for a patient hearing; and I trust the present strike will afford opportunity for the subject of capital and labour being so thoroughly discussed and ventilated that some means will be adopted by arbitration or otherwise that all future strikes may be adjusted, so that the fearful distress occasioned by them amongst the operatives, and the great inconvenience and loss to the contractors and public, will be done away with. You are aware that for some years past a praiseworthy effort has existed amongst the operatives to improve their social condition, increased, to a certain extent, by associating themselves in benefit societies or unions, the original motives of which were to provide funds for the sick and aged members, as also at death, and possessing in addition many other advantages for the benefit of the operatives. Latterly, however, the good intention of these societies has been perverted, and they now become, instead, the chief sources of support during strikes in the various trades, or, as the operatives say, "to vindicate free labour against the tyranny of capital."

But, Mr. Editor, the reverse is the fact. These unions have become so powerful, that they attempt to usurp the rights of capital, and not only to dictate to the masters the terms of labour, but endeavour to deprive them from having a voice in their portion of the agreement, and frequently dictate what men shall be employed, and the amount of labour executed, usually taking advantage of a contractor when his year's contracts are made, and the work commenced.

You will say, why do not the masters prevent this dictation? The simple fact is, that during the period in which the men have availed themselves of combination in union to a very powerful and dangerous extent, the masters have remained inactive, and have individually combated each strike, or turn-out, or difficulty, as it has arisen, feeling unable, in the disorganized state of themselves, to do otherwise than succumb, in the best way they could, to the demands made upon them. The builders of the midland counties have happily now considered these things, and have resolved in all future strikes to act in union as do the men.

To this end simply has the Association been established, and not to interfere with the freedom of action amongst the operatives, as set forth by the press.

The masters feel the growing power of union amongst the operatives, and consider themselves justified in resisting further inroads upon them.

The "discharge note" (the cause of the present strike) is one amongst other rules laid down by the Association. The members simply wish to know the antecedents of the men (and not their character); although I feel sure honest, industrious men will be glad to avail themselves of a character which the masters will never refuse.

The masters have decided not to employ any workmen on strike, for they feel that by so doing they contribute power to the unions and weakness to themselves; for doubtless you are aware that as soon as a strike commences all the young men seek work in other towns, and send weekly contributions to support the few that are left in the town where the strike exists. Therefore the masters were powerless until union was established among them. I can quite understand that the operatives are averse to the union among masters, because they will henceforth have to combat against their own

weapons. I shall rejoice to see every master in England join an association, and earnestly entreat the immediate co-operation of all builders and contractors with this Society, so as to establish a general bond of union. The only thing that should regulate capital and labour should be supply and demand, the latter generally being in favour of the operative, and no doubt his wages and other requirements will be, from time to time, advanced. I shall give you on a future occasion a few of the numerous instances of interference and annoyance, illustrating the treatment of masters by men; you will then see still further why immediate combination is so requisite for the protection, not only of the masters' interests, but of those of the public also. Alfred Stinton, Secretary.

THE "DISCHARGE NOTE."

Sir,—I venture respectfully to say that it is not the "Discharge Note" that has given the offence, but the fact that some 350 builders in this district (Birmingham) have formed an association for their mutual benefit and protection.

The men have combined for the purpose of regulating the rates of wages, hours of labour, whom they will work with, and how the work shall be done; and, in fact, with the exception of making arrangements for the various works, and finding the needful, the men, on all large jobs and in the larger towns, are completely masters.

With this fact before them, the builders saw no other remedy than meeting the men on their own ground, by combination and adopting a bond between themselves that could be put in operation if needful. At the present moment there may not "appear to be any cause for the movement on the part of the builders;" but the same remark will apply with equal force to the existing workmen's trade unions, in their too frequent action and unexpected demands.

Without claiming for builders a higher character for honourable dealing than other men, I submit that the men could not possibly be so much the subject of "spite" or "caprice" as many unfortunate contractors have been by the usurped power of trade unions.

No sane man will deny the right of a master to inquire into the antecedents of any workman he may be about to employ. The discharge note is therefore, in my view, simply a more business-like and systematic mode of ascertaining these matters. If a workman should be of a character likely to disturb the peace of my workshops, I have a right to know it, and therefore to refuse him work. This might teach such that honest labour would be better than meddlesome conduct, and infusing strife where satisfaction would otherwise exist. Workmen's wages would improve, if circumstances justified it, on the unalterable law of supply and demand, without the too frequent ignorant interference of men who only want the money without giving an equivalent for it. The workmen have an undoubted right to combine for the protection of labour; and, on the same ground, the builders have a right to combine for the protection of capital, which is all they seek to do in the present movement; and if the workmen complain of the masters' combination, and its effect in checking the aggressive demands of the men, let them first give up their unreasonable interference with the rights of capital, of which masters have just cause of complaint. A Builder.

Sir,—I was much surprised to observe, on reading your article entitled "The Building Strikes" (in last week's number), the encouragement and advocacy therein given to workmen in resisting the introduction of the "discharge note." I cannot understand why master builders should be accused of tyranny, in their endeavours to obtain that which every other trade or profession enjoys, and which every one soliciting employment knows to be a *sine qua non* to his preferment, viz., testimonials, and reference as to character and suitability from his recent employers. The "discharge note" is nothing more than this, and is designed simply to protect the masters from the unjust tyranny of the workmen, to which they have been too long subject. Hitherto masters have had no protection against their workmen on strike,—the men well knowing that if their demands were not acceded to, they had only to go to the next town (in consequence of the abundance of work in the country) and at once obtain employment,—the men in all probability neither asking for nor receiving that for which they had struck in the neighbouring town. The masters throughout England must unite in one powerful society, and resist the further tyranny and dictation of their men, or ruin must be the inevitable result.

John Barry, Contractor.

THE ENGINE-DRIVER'S CHRISTMAS-DAY.

Above him floats the drifting steam,
Around him flies the parted snow:
While, flashing in the wintry gleam,
The piston glances to and fro.

No track of path, no blade of green,
O'er all the wide expanse appears;
The frosty air is cold and keen,
And whistles fiercely in his ears.

He heard, this morning, ere 'twas light,
The bells of the great city ringing,
The tidings of the holy night
With joyous voices round them flinging.

He heard the carol far away,
Nor murmur'd that the joyful strain
Waked others to a holiday,
But call'd him to his work again.

He thinks how all the bells would ring,
In his old village church at home;
And how the waits were wont to sing,
As they from house to house would roam.

And in the roaring of the wheels
He hears their echo evermore:
The changes of the gladsome peals,
The waits beside the cottage-door.

The well-known scenes before him rise,
The snow-clad church, the village train,
All stand in thought before his eyes,
As if he were a boy again.

Before the whistle's piercing scream
The stillness of the landscape broke;
Before the roaring of the steam
The cavern's slumbering echoes woke:

Before the iron way was laid,
By field and hamlet, tree and tower,
Or people thought to be convey'd
To town at "forty miles an hour."

Ah! yes—those times are past and gone.
One glance around—the dream is fled:
The snow is o'er his pathway hone—
The steam-cloud floating o'er his head.

He eats his Christmas dinner there,
Beside the roaring engine fire,
Contented with his humble fare,
And never seeks or asks for higher.

That bunch of holly, green and bright,
Beside the shining boiler-dome,
He means shall decorate ere night
The whitewash'd chimney of his home.

For so each village home was gay
At Christmas, when he was a boy;
And he would make the festive day
Still to his children speak of joy.

Before them spreads no village scene—
The housetops bound their narrow view;
But they will love the bit of green
More than their father used to do.

How they will run his steps to meet,
With sparkling eyes and voices merry,
And prize it in that dingy street,
And number o'er each scarlet berry!

And when the day is almost done,
And the dim light is nearly spent,
And the stars twinkle, one by one,
In the clear frosty firmament;

When in the steam-cloud overhead
Bright sparks drift in the rushing wind,
When lighted are the front lamps red,
And the bright tail-light gleams behind;

How cheerful is the ruddy glow
By the red furnace shed around;
Kindling with light the winter snow,
And flashing on the frozen ground!

Yet brighter, to his eye, at night,
His humble cottage fire shall burn,
What time his children, with delight,
Run forth to greet his safe return.

When the closed door, the candle lit,
Leave nought of snow and storm to dread;
Then round their humble board they sit,
By careful housewife neatly spread.

When the bright holly hangs display'd,
To ornament the chimney wide,
Which all day in the wind had sway'd
The boiler's polish'd dome beside.

When in the cheerful faggot's blaze,
The children gathering round his chair,
He tells of bygone Christmas days,
Then closes this with praise and prayer.

For he may have a thankful heart,
Although he could not join the throngs
Who pour'd from city, lane, and mart,
To meet in prayer and joyful songs.

And he may serve who strives to hold
On his plain course of duty right:
Was not the heavenly message told
To those who "watch'd their flocks by night"?

So shall he sleep in thankful cheer,
And scarce the thought his rest may spoil,
That "Christmas comes but once a year,"
And is for him a day of toil.

CORK CATHEDRAL.

Dear Mr. Editor,—I have much pleasure in replying to Mr. Hardman's question respecting the destination of the old fragments of St. Fin Bar's Cathedral, at Cork. The following clause of the specification will, I think, show him that the subject has already received careful consideration:—

"Any pieces of ancient carving, &c., found in pulling down the church, to belong to the dean and chapter, and to be fixed by the contractor wherever directed by the architect."

As regards the present western doorway, according to Mr. R. Caulfield, who has taken great pains with the history of the building, the said doorway does not belong to the Cathedral at all, but has been brought from the Dominican Abbey of St. Mary-in-the-Isle. Certain it is that the material is red sandstone, while all the rest of the church is white limestone.

Doubtless many remains of the old building will be found in the walls and foundations; and I think I may say, on the part of the dean and chapter, that every care will be taken to build them up in the walls of the new structure, and thus preserve them for posterity.

W. Burges.

THE CLOSENESS OF SHREWSBURY.

Sir,—A short time ago you made some very just remarks on the sanitary condition of Shrewsbury. The illiberal spirit evinced by some of the burgesses would scarcely be believed in other places. About five weeks since, observing a house to be let, I applied to the owner, Mr. ——, who asked references, and I gave most unexceptionable ones; but when he found I was not a Shrewsbury man, he declined to accept me as a tenant, although I offered one year's rent in advance. Every week since then the house has been advertised in the local papers at 1*l.* less rent than I offered. The owner's conduct seemed so strange, that I called and asked him if he would make me a suit of clothes. He said, yes. I asked if that would be proper, as I was "not to the manner born." He answered, that was different, but if strangers were let houses, the town would be overrun, and the natives ruined and robbed of their living!

H. R. Evatt, Assurance Superintendent,
Salop.

CROOKED CHIMNEYS AND HOW TO SWEEP THEM.

I see that your correspondent, "An old J.P.," protests against the use of soot-doors on account of their disfiguring the rooms; but if soot-doors are placed where they should be, viz., in the external face, they need be no disfigurement. The soot-door forming the ground of a sunk stone panel should be made to fit accurately, and to fasten with a thumb-spring. The soot-door being placed over the top of the grate, previously to sweeping, he should have a piece of sheet-iron or thin wood made to fit tight between the jambs of the chimney-piece in front of the grate to prevent the falling soot drifting into the room; and a soot-box should be passed through the aperture or soot-door outside, just over the top of the grate, so that when the chimney is swept, the box is removed, and the soot with it, without the sweeper coming into the room at all. This arrangement is also applicable to flues that are not in the external walls; for the back of the grate is often in some unimportant room where a soot-door might be placed of an ornamental character. Every building of this kind should have an apparatus for sweeping it,—but not with a holly-bush, as recommended by "A Young Architect," as you would have to be continually climbing to the top of the house, breaking the slates or tiles, and doing infinite damage to the flue by raking off the pargetting and mortar out of the vertical joints in the brickwork by the repeated scratching of the boughs. The method I should recommend is to have an iron rod securely fixed to the top of the chimney, with a brass pulley in the top of it, about a foot above the top of the flue, and from this pulley have an endless copper-wire rope always hanging down the flue, with a ring at the bottom of it level with the soot-door. The brush to be a large stout indiarubber ball, about 12 in. or 14 in. diameter, inflated with air, and lined with a soft leather covering, studded with short steel bristles, about $\frac{1}{16}$ in. long; the ball to be

hooked on the ring, and, by pulling the wire-rope, the ball goes up; and by pulling the reverse side, you bring it down again, and put by until wanted again. The box being taken out, and the soot with it, and the door refixed, the sweeping is done. An apparatus of this kind would sweep almost any flue, however crooked, as the ball when it came in contact with the bends and flats would give way on those parts hardest pressed, and adapt itself to the form of the flue, always pressing closest on those parts of the flue that require the most sweeping; and the steel bristles would more effectually scrub the soot off than could be possibly done by a scraper or machine. HENRY PRICE.

METROPOLITAN BOARD OF WORKS.

Thames Embankment.

At the last week's meeting of the Board, a report was presented from the Thames Embankment Committee in reference to Contract No. I. The committee reported that Mr. Furness had attended before them; explained the course which he proposed to take in reference to the future execution of the works; and expressed his confident anticipations of proceeding with much greater rapidity than hitherto. He stated that the necessary arrangements will occupy about a fortnight from this time, after which he will be in a position to construct the requisite cofferdam at the rate of 100 ft. per week, and to complete the works within the time limited by the contract. The committee had instructed the engineer to report, at the expiration of a fortnight, the progress made in carrying out the proposed arrangements, and request authority to report from time to time on the state of the works. The report was approved.

The Committee also reported that they had arrived at the conclusion that the monthly advances to be made to the contractors for the Thames Embankment Works shall be as follows, viz., 90 per cent. on the work executed in accordance with the contract, 90 per cent. on materials brought upon the works, and 75 per cent. on the plant. This report was finally agreed to.

In reference to a letter of complaint from Mr. Thomas Scott, Mr. Bazalgette explained that he did not say, as alleged, that Mr. Gilbert Scott was not using Mr. T. Scott's granite. He had written to Mr. Cubitt to know if he had selected Mr. Scott's Downshire granite for the piers of the new Blackfriars Bridge, and he stated in reply that he had not yet decided on the granite to be used for the new Blackfriars Bridge piers.

Mr. Bidgood apologized to Mr. Scott for the trifling error he had made.

Mr. Doulton called attention to the Act of last session authorising the construction of the Metropolitan Railway in the line of the Thames Embankment, and moved that a letter be addressed to the directors urging them to take the necessary steps for so carrying out their undertaking as to avoid interference with the Board's works after their completion. The motion was agreed to.

Estimated Expenditure for 1865.

The estimate of expenditure for 1865 was presented to the Board, making the total sum required 130,501*l.* 6*s.* 4*d.*

Mr. Dalton called attention to the fact that in the past year the ratepayers had to pay 3¼*d.* in the pound, whereas in 1865 the rate would be only 2¼*d.* in the pound. He moved that the estimate be agreed to. The consideration of the matter, however, was adjourned until Friday (yesterday).

RUTHIN CHURCH, &c.

SIR,—You have lately mentioned that, in alterations at Llangollen Church, the carved ceilings would be preserved. Will you allow me to mention that there is, I doubt not, not having seen the interior at Llangollen (whose patron saint, Collen, has such a very long genealogy), a still more beautiful one,—at least, for one of its two aisles,—in the not distant church of Ruthin, in same county. This building was probably longer, as the present chancel is (or was) very short; and the tower at the east end of the north aisle. It has also a noted ring of six bells, especially the tenor; was formerly collegiate; and its incumbent is, perhaps, nearly the only parochial one now styled "warden."

It is rather singular that there are other town churches in Wales with two large aisles only, generally of almost exactly the same dimensions. The only similar instances I know of in England (though there are, perhaps, some large village ones in Cumberland, or in adjoining county, and also some in Guernsey), are St. Helen's, Bishopsgate, Truro, and St. Paul's, Bedford. D.

BRITISH ARCHÆOLOGICAL ASSOCIATION.

ON December 14th, Dr. James Copland, V.P., in the chair, Mr. Bidder exhibited a bronze statuette of Mars, said to have been found in London. It was considered of Etruscan fabric, and resembled an example brought from Mr. Cuming's collection obtained in Italy in 1854. Dr. Kendrick gave an account of a Roman brine pan (perfect) in the Warrington Museum, found at Nantwich, Cheshire. It is of lead, and obtained with portions of others 10 ft. below the surface. One fragment has the word *DEVE* inscribed,—the ancient name of Chester. The pan appears to have been cast in its present form, and is an interesting object.

Mr. Carmichael called attention to a legend in Irish characters on the base of a cross found in a bank through which the House of Friars Carse is approached. This and other objects are thought to have been brought many years ago by a former owner from Dumfriesshire. The inscription reads "ORA PRO ANIMA," followed by the name "COMERGHIE DE JA. . H."

Dr. Palmer, of Newbury, local secretary for Berkshire, gave an account of the progress of researches being carried on at Silchester, by direction of the Duke of Wellington, under the supervision of the Rev. J. G. Joyce. Excavations have displayed the course of the roads, position of the houses, tesselated pavements, &c. A diary is kept of every article obtained, and plans made of the buildings.

Many other exhibitions were made, and Mr. Irvine addressed a letter to the Association, urging their continued attention to the preservation of the ancient and interesting church of Okeford Fitz-Payne, in Dorset, threatened with demolition.

CHURCH-BUILDING NEWS.

Lyminster (*Sussex*).—The church here, which is now being restored, has a chancel 45 ft. long, being three times its width; a nave 63 ft., being also exactly three times its width; and a north aisle, separated from the nave by an interesting arcade of four bays of Transition from Norman to Early English period. The doorway at west end of nave is of the same character. This was the external door before the tower at west end of nave was built. This is of rather later date, the belfry stage having been erected still later, as also the porch. Just above the nave (circular) piers, heads of windows have been opened, and now remain so: these were the original small Norman ones in the north wall, before the aisle was added. There is also a Norman font, a Norman window, and blocked up round-headed doorway in south wall of nave. The plaster ceilings have been removed, the timbers of roofs being now visible. The galleries are now down. New lancet windows have been added to aisle, which was before lighted by dormer windows in the roof; and the whole length of aisle, 64 ft., with its most interesting old roof, has been opened to the church, 10 ft. at east end and 16 ft. at the west having previously, with one bay of the arcade, been blocked off for various purposes. The seats, pulpit, flooring, &c., will be new, and the whole, inside and out (except chancel), will be entirely restored, if sufficient funds can be obtained to proceed with the tower and porch, which are not included in the contract. Mr. George Truefitt is the architect, and Mr. Bushby, of Littlehampton, the builder.

Standon, near Ware.—On Friday, the 23rd inst., the restored church of St. Mary, Standon, Herts, was opened, the Lord Bishop of Rochester preaching on the occasion. The structure is one of great interest; the chancel, with remarkable chancel arch, Early English; and the nave decorated. The latter has been restored at the cost of the parishioners and the friends of the Rev. C. Puller, the vicar; and the chancel at the cost of his Grace the Duke of Wellington; Messrs. G. & H. Godwin being the architects. After service a luncheon was given by the parishioners, Mr. Abel Smith, M.P., presiding, supported by the bishop, Mr. Wigram, Mr. Puller, Mr. Hanbury, and about 200 friends. The chancel is elevated some ten or twelve steps above the nave, and has at the east end a fine triplet window filled with stained glass, a memorial of the late Mr. Puller, M.P., subscribed for by the county. We shall give an interior view of the church before long.

Bisley.—The inhabitants of this parish and their friends have succeeded in their endeavours to get up a subscription for two new bells, which have been added to the parish church tower, making a peal of eight. The peal was opened by the ringers of Stroud Church, under the superintendence of Mr. H. Marmont, of Stroud. They rang some touches of grandsire triples, composed by Mr. Marmont for the occasion. A dinner was provided at the Red Lion Inn, to which about forty of the gentry and subscribers, besides the ringers, sat down.

Saltash (*Cornwall*).—A correspondent of the *Church Times*, under the signature of "Clericus," complains of the way in which St. Nicholas's Church, Saltash, is to be restored. He says:—"I regret that the plans which have been adopted, and the arrangements in contemplation, are by no means in accordance with correct principles. For instance, the choir, as I understand, are to be placed somewhere in the north aisle, and the beautiful old tower arch is still to remain blocked up with lath and plaster, and the basement of the tower is to be converted into a vestry, for what reason I cannot possibly imagine, there being every convenience for a vestry in the south side of the chancel, where the original priest's door still remains."

Burton-under-Needwood (*Staffordshire*). The parish church has been re-opened. The first stone of the new and greatly-enlarged aisles of the nave was laid by Mrs. Hardy, of Dunstall Hall, on Whit-Monday in the present year, and since then the works have been pushed forward by Messrs. Elliott & Lilley, of Ashby-de-la-Zouch, under the direction of Messrs. Stevens & Robinson, of Derby, architects. The chief features of the work now done are these: All the high pews have been swept away, and the galleries, of course, fell with the aisles, which they had long choked up and darkened. The organ is now placed in the chancel. The brickwork which filled up the tower-arch and entirely hid the west window has been taken away, and the window restored. A new doorway has been placed in the tower-wall, and the tower thus becomes the principal porch of the church. A porch has been built to the new north aisle; a new doorway has been put into the south aisle of the chancel; a new chancel arch has been erected; and the whole area of the church refloored, and the passages repaved. The multiplied coats of whitewash have been scraped off, and wherever stone existed it is now shown, and where it did not exist the walls have been plastered. The floor of the nave has been sunk 9 in., and thus an increased elevation is given to the chancel, and height to the pillars and arches supporting the clerestory. Something remains to be done. The chancel, though swept clear of the pews, is only temporarily seated with benches, all within the communion-rails and the rails themselves remaining as before. The windows, too, in the south chancel aisle, are merely patched up, and stand in need of a thorough restoration; and the same may be said of the clerestory windows.

Patrick Brompton (*Yorkshire*). — For some months past the church here, which is dedicated to St. Patrick, has been undergoing a restoration, and it has been re-opened. The work was placed in the hands of Mr. G. F. Jones, of York, architect, who proposed that the whole of the church should be re-roofed and re-seated; that the floor and the whole of the stonework should be restored; that an entirely new porch should be erected; and that the tower, which was too small for the proposed restoration, having originally been one attached to a much smaller church, should be enlarged and made proportionate with the remainder of the edifice. The church consists of the tower, nave, aisles, chancel, and the south porch. The chancel is of the Decorative period, with two-light windows on the sides, and a large east window, of five lights, with flowing tracery. The windows of the aisles are of a similar character, and there have been three new ones placed in, one on the north side and two on the west. As the funds for the restoration of the tower were insufficient to rebuild it entirely, the architect has encased the whole or greater portion of it in new work; and, with the addition of buttresses, and raising it to about 90 ft. in height, it now bears proportion with the renovated appearance of the church. It has an embattled parapet, ornamented by eight crocketed pinnacles, behind which a pyramidal roof rises, 25 ft. The belfry windows are in unison with the style of the others of the church, and in the lower stage of the tower is a two-light window, opening into the church, which has been filled with stained glass. A new tower arch has been introduced, which has mural tablets on each side. The roofs of the church are

all high-pitched and open, and boarded in panels, the ribs springing from corbels in the nave and aisles, and from carved wooden brackets in the chancel. The porch and the font are the special gift of Mr. Jonathan Rigg. The porch incloses the old south door, which is in character with the arcade inside. The font is of Caen stone, carved, with marble shafts, and monograms inlaid in marble on the sides. There is a stained-glass window put into the south side of the aisle, to the memory of the married daughter of the incumbent and her husband, both deceased. The ashlar work of the chancel and walls has been brought out by removing the old whitewash. The edifice has been warmed by two of Rimington's stoves. Externally the stone-work has merely been repaired where it was defective, and new tracery inserted into the windows. New crosses have also been added to the east gables and over the porch. The external doors are all of oak, but some of the old ornamental iron-work has been re-used. The old bells, which are three in number, have been rehung in the tower. The church-yard has been extended and inclosed in a new wall supplied with oaken gates and stone pillars. The edifice will now accommodate three hundred. The wood-carving has been carried out by Mr. Jones, of York; the stone-carving by Mr. Cole, of York; and Mr. Palliser, of Northallerton, has been the general builder.

Richmond (Yorkshire).—Trinity Church, which has been undergoing restoration, has been formally opened. This church was built about the middle of the twelfth century, and consisted of a chancel and a nave, with north and south aisles. The chancel and south aisle, however, have been allowed to fall into ruin. The north aisle was walled off from the nave and used as a consistory court. The first step towards the restoration was to alter the present short chancel, which was done in 1859. The work now completed comprises the rebuilding of the north aisle, and the re-seating and general re-fitting of the church. The seats in the aisle are all longitudinal, facing south, and are slightly raised towards the back. A memorial window of stained glass has been inserted in the west window of the aisle, by the family of the Rev. James Tate. The east window of the chancel was filled some time ago with stained glass, by Mr. Alderman Cooke. All the windows of the chancel are filled with plain glass, excepting the above. Messrs. Austin & Johnson, of Newcastle, were the architects.

Dewsbury.—The Bishop of Ripon has announced that an anonymous person has offered 300*l.* towards the erection of a new church in Dewsbury, on condition that an equal sum be raised in three months towards the same purpose; and that the church accommodate 400 adults.

DISSENTING CHURCH-BUILDING NEWS.

Bristol.—Grenville Wesleyan Chapel, after having undergone considerable alterations and improvements, has been re-opened for Divine worship. The schoolroom has been enlarged to double its original size, so that it will now accommodate 350 children. A heating apparatus—which also heats the chapel—has been erected in it. Two new class-rooms, each about 15 ft. by 10 ft., have been built adjoining the schoolroom. One of the principal improvements in the chapel itself is the removal of the pulpit, or rather the erection of a new platform pulpit, with a winding staircase on each side of it, erected against the wall at the top of the chapel. This alteration alone has provided space on which six additional pews have been erected. The colour of the pulpit is white, with gilt mouldings, and shields painted blue. The reredos behind the pulpit has been raised, and the entrance-doors of the chapel are covered with blue cloth. All the seats are of grained oak. Ventilators have been inserted in the ceiling, and many of the mouldings have been gilded. Mr. Sweetland, of Bath, has erected a new organ. The total cost of the alterations and renovations is rather over 700*l.* The architect was Mr. Hancorn, of Newport (Mon.). Mr. Nipper, of Stoke's Croft, was the general contractor, the sub-contractor for painting being Mr. Fedden.

Islington (Birmingham to).—The new Wesleyan Chapel which has been in course of erection in St. Martin's-street, Islington, for some time past, has been opened. The new chapel has been erected to supersede the old one in St. Martin's-street, which had become too small for the large and increasing congregation. The design was furnished by Mr. J. H. Chamberlain; and the builders were Messrs. Webb. At the eastern end is a stained window, by Messrs. Hardman & Co., after a design by Mr. S. Evans. The cost of the building is 6,200*l.*, inclusive of the site, which cost 1,275*l.*

Cheadle.—The new Wesleyan Chapel, Kingsley, has been opened. The building, which has been erected on the site of the old edifice, is of modern style, with Corinthian windows. It is built of polished red brick with stone dressings, the stone, which is nearly white, having been obtained from Hollington quarry. The contractors were Mr. H. Wyring, of Cheadle, for the building, and Mr. G. Plant, of Kingsley, for the woodwork. The chapel is capable of accommodating 300 persons. It has cost about 200*l.*

Liverpool.—The foundation-stone of a new chapel, in connexion with the Congregational Church, has been laid, in Green-lane, near the Old Swan. The building about to be erected will be in the Early Decorated style. In the front there will be three bays, divided by nine pinnacle and crocketed buttresses. The church will be constructed of white brick, with dressings of Bath stone. The galleries will be constructed so as to prevent undue crowding at the entrances. Accommodation will be provided for 750 persons in the main portion of the building; while the side galleries can be made to accommodate 300. The cost of the building is estimated at 3,000*l.*

PROVINCIAL NEWS.

Cardiff.—According to the plans of the new dock scheme, after passing the outer gates, vessels will enter a basin 700 ft. long by 500 ft. wide, vastly larger than either of the existing basins. The area of the basin of the East Dock is two acres: that of the basin in the new dock is to be eight acres. Penarth basin has only 60 ft. width of entrance, and both the East and West Docks are inferior in this respect. The new basin, however, will have an entrance width of 80 ft., and will be furnished with two twin tips, by which the largest ocean-going steamers can be coaled in one, or, at most, two, tides. The depth of water in the basin and dock will be 36 ft. at high-water ordinary spring tides. The basin will be built of solid masonry, with perpendicular walls. The dock-walls, however, will be sloped inside. Thus the width of the coping of the dock will be 700 ft.; but that at the base will be but 500 ft.: this will give a superficial area of 49 acres at the coping level, and of 34 acres at the base of the walls. The area of the present East Dock is 46 acres, so that practically the new dock and basin will be about equal to the East Dock in size, though greatly superior in depth, as well as having fourfold advantage in the size of its basin. The new dock differs from the existing ones in receiving no water from the land. It is to be wholly a tidal dock, although the notice mentions the Taff as among the sources from which water may be drawn; but this refers only to such water descending the bed of the Taff to its mouth as may be borne back into the dock by the incoming tidal waves.

Manchester.—The over-crowded state of the present exchange, says the local *Courier*, has induced the directors to promote a plan for the erection of a building superior in every respect to the present one. The block of property comprising Newall's-buildings, and bounded by Bank-street, Cross-street, Ducie-place, and Market-street, has been secured for the purpose. The intended room will be more than half as large again as the existing one, and will afford accommodation equal to the Hamburg Exchange, which is said to be the largest in Europe. Active progress has already been made in the necessary measures for carrying out this undertaking.

Newcastle-upon-Tyne.—At a recent meeting of the magistrates of Newcastle, Mr. Moffatt, of Edinburgh, was appointed architect for a new lunatic asylum, to be erected, for Newcastle, near to Coxlodge.

ACCIDENTS.

In the Hemingford-road, near the Brecknock Tavern, Camden-road, a very large scaffold at some buildings that are in the course of erection there fell, severely injuring five men who were at work on it for Mr. Wilmott, the builder. The men were at work on the top story, a distance of about 32 ft. from the turf, when one of the "ledgers" broke, and precipitated the whole to the ground.——An Artesian well has been in course of construction at St. George's Brewery, Kidderminster, and much trouble and expense have been caused by the breaking of the augur used to bore the hole. Lately Mr. Southan, well-sinker, has been employed, and good progress has been made till two of the men employed were, it is feared, fatally injured by the falling of a couple of bricks on to their heads from above. It appears that the accident was caused by the bucket used to carry the earth from the bottom of the well striking the sides and thus loosening the bricks. —— One of three double houses just built in Hillary-street, Leeds, fell in through the collapse of the outer wall next to the site of some other houses about to be erected by Mr. Winn, of Little London. The excavation for the foundations of these had almost been completed, and it is said to be likely that the removal of the soil, and the recent fall of heavy rain, had the effect of diminishing the stability of the adjoining building. It is not admitted, however, by Mr. Winn that the earthwork had been removed to the depth usual for the purpose. The houses which fell in were three stories high, exclusive of the basement. The front walls were no more than one brick thick, and the interior walls only of half that solidity.——A frightful accident has occurred at Hartlepool. A number of workmen were engaged in raising the segment of a large fly-wheel at new rolling-mills in course of erection there, when the crane fell over. One man was killed on the spot, another was so injured that he died in a few hours, and six others were more or less seriously injured.

THEATRICAL.

We shall have to speak of some particularly good scenes for the Christmas entertainments at *Covent Garden*, *Her Majesty's Theatre*, and the *Princess's*.

At the *Haymarket*, Mr. Sothern's admirable acting,—genuine and excellent acting,—in "David Garrick;" his eccentricities in "Dundreary Married;" and a bright little extravaganza, "Princess Spring-time" (not *over*-clever, by the way), are filling the house. The extravaganza enables Miss Keeley to sing one or two songs very charmingly, and includes one pretty-enough scene, by O'Connor, called a Beautiful Island. Mr. Byron, by whom the extravaganza is written, is evidently too much called on at Christmas.

Paris.—Photographs before us, obligingly sent us by the architect, show that the construction of the new opera-house is advanced so that the different parts of the building, as regards their destination, may now be distinguished. The stage is visible, and the portion of the house reserved for the public is raised as high as the first tier of boxes. Workmen are engaged at present in raising the columns, each of a single stone, which are to decorate the grand *loggia*. The entire of the ground-floor, the entrance, the lobby, and the side galleries are distinguishable. The staircase for subscribers is reached through the refreshment-room. The ceiling of the saloon is of iron, fixed in stone, and above the first tier of boxes may be seen the hollow tubes by which the house is to be heated and ventilated.

On the 21st inst., the 225th anniversary of the birth of Racine, the *Vaudeville* Paris theatre gave a special representation in honour of that celebrated man. After a prologue in which one of Racine's poems was skilfully inserted, there was a comedy, in one act, *Racine à Uzès*, by Edouard Fournier, who had made a special voyage to Uzès in order to render this piece of dramatic biography as completely life-like as possible.

Vienna.—It is stated that the theatres in Vienna have been closely examined, with reference to risk of fire and general security and comfort. The commission found various causes for complaint, and, among other things, ordered the following:—"That there should be no lights in the green-rooms lower than 8 ft. from the ground; that all lights should be protected by glass or wire; and that there should be a raised ledge of 3 in. in the front of the boxes to prevent opera-glasses, &c., falling over."

Palermo.—The authorities at Palermo have announced a competition for a new theatre, to contain 3,000 spectators, and for which the sum of 100,000*l.* has been voted. Five premiums are offered, varying in amounts from 25,000 francs to 2,000 francs, and all the world is invited to compete.

Books Received.

"The British Almanac and Companion" (Knight & Co., Fleet-street) maintains its position as one of the indispensables of the writing-table. Amongst the contents of the Companion are papers on "Railways in their Social Relations," "The Physical Constitution and Functions of the Sun," "The Health of the British Army in India," "Working Men's Clubs," and its usual chapter on "Architecture and Public Improvements." —— "Gutch's Literary and Scientific Register and Almanack for 1865" (Stevens, Strand), contains information about everything, selected with much skill.——The interesting insurance facts which are embodied in "The Royal Insurance Company's Book-almanac for 1865" are well worth the perusal of policy-holders. The curious details here shown as to the rate of mortality at various ages, and the unsparing dissection of the position of the Company's life business generally, render this little work noticeable among those of its class. It would seem that the periodical disclosure of the Royal's condition has, so far from impeding its progress, resulted in a great development of its business.——Let us mention, and we do so not merely willingly but with strong desire to assist in spreading abroad the "British Workman" and the "Band of Hope Review," that these publications continue to be carried on with vigour and discrimination. Some of the illustrations given are excellent, and, if the price be considered, marvellous.——"Young England" (Tweedie, Strand). The third volume of this miscellany, now completed, contains much wholesome information calculated to interest boys, especially on Natural History.

Miscellanea.

TUNNEL UNDER THE LIFFEY.—A tunnel is about to be constructed under the River Liffey, at Dublin.

KIRKCUDBRIGHT, SCOTLAND.—A new county prison and court-house have been commenced here. The offers for the portion forming the prison were opened last week, and Mr. M'Candlish, the contractor, has commenced operations. Mr. Rhind, of Edinburgh, is the architect.

SCOTTISH NATIONAL MEMORIAL.—We understand that the whole of the designs contributed to the competition for the Scottish National Memorial of H.R.H. the Prince Consort have now been arranged in the Eastern Division of the National Gallery, and that the Committee of advice nominated by Her Majesty held their first meeting there for the purpose of inspection, on Saturday, the 24th. The total number of designs is fifty-three. The models occupy one octagon of the Gallery and the drawings another.

MEMORIALS.—The foundation-stone of the Welsh memorial dedicated to "Albert the Good" was laid on Wednesday, the 14th of December, being the anniversary of the Prince's birthday. The site selected is on the summit of the Castle hill, at Tenby, a promontory of mountain limestone jutting out into Carmarthen Bay. It rises to about 70 ft. above highwater-mark. The foundation-stone is a block of native marble. The architect of the memorial is Mr. H. M. Finch, and the sculptor Mr. J. E. Thomas; but why the vellum inscription, which contains all the names of committee-men, secretaries, treasurers, principal subscribers, overlooks the architect's name, it would be difficult, we dare say, for the self-asserting "committee" to explain, except that their consciousness of their own swelling importance in the matter completely obliterated all recollection of one so comparatively insignificant in their eyes. They have had the wonderful condescension, however, to name the sculptor, —after their "noble selves."——A proposal has been made to erect a memorial of that true nobleman, the late Earl of Carlisle. The project seems likely to be very popular. It has been suggested that an obelisk on the summit of Slingsby Banks, some two miles from Castle Howard and six miles from Malton, would make a companion erection to that placed by the third Earl at the south end of the avenue, to commemorate the victories of Marlborough, and would be a conspicuous object over the greater part of North Yorkshire.

STEAM OMNIBUSES.—An omnibus drawn by a locomotive, instead of horses, is now running at Chantenay, in the South of France. It can be turned and stopped with ease; and both inside and outside passengers travel by it without fear.

LANDLORD AND TENANT.—A lease "for the term of twenty-one years, determinable nevertheless in seven or fourteen years, if the said parties hereto shall so think fit," can only be determined at the end of seven or fourteen years, if *both* parties agree to it. This was the holding of the Court of Exchequer in the case of *Fowell* v. *Tranter*.

A FIRE-EXTINGUISHER.—An apothecary at Nantes has just discovered by accident that liquid ammonia will put out fires. The result, remarks *Galignani*, is easy to explain on scientific principles; for ammonia, which consists of 82 parts of nitrogen and 18 of hydrogen, is easily decomposed by heat; and the nitrogen thus set free in the midst of a conflagration must infallibly put out the flames.

ANOTHER DEATH FROM LEAD POISONING.—A man employed at lead smelting works, in Bethnal-green, died the other day—as the coroner's jury found—"from paralysis, from lead poisoning acting upon a weak constitution." Among the witnesses examined at the inquest was Mr. Grace, a white lead manufacturer, who said that some of his workpeople had been employed at his works forty years. Nevertheless, the business was unhealthy; but a great deal depended on the *employés* themselves. If they were cleanly, washed carefully, and took opening medicine, which was provided for them, they could to a great extent obviate the effects of the lead.

THE PRICE OF LAND IN SCOTLAND.—We (*Elgin Courant*) understand that Mr. E. Horsman, M.P., the present lessee of the Glenfeshie shootings, has purchased the fine little property of Alvie from the trustees of the late Mr. Baillie, of Kingussie. The purchase price, we hear, is 20,000*l*. Taking the present rental, 500*l*., as a criterion, we would say Mr. Horsman has paid for his whistle; but the property is susceptible of much improvement, and may, with a moderate outlay, be made a tolerably good and at the same time a most desirable investment. It is not many years since the late Mr. Baillie purchased from the late Duke of Gordon the above property (on which he never expended a single shilling) for 6,500*l*.

STOURBRIDGE SCHOOL OF ART.—The annual meeting of this school was held in the Corn Exchange. Lord Lyttelton presided. The report of the council congratulated the friends of the school upon the progress made by the students, the increase in their number, and their generally regular attendance; and upon the favourable state of the finances. The income from the Government had not decreased in consequence of the payments being made upon results instead of the master's certificate, as heretofore. The excess of income over expenditure, to the 30th of September, had been 15*l*. 0*s*. 8*d*. Although the mortgage debt had been reduced to the extent of 60*l*., it still, however, amounted to 640*l*. Mr. Bowen the head master's report stated that the Central School had been attended by 145 students, and the progress made had been satisfactory. Four medals had been awarded to students' works at the examination held in London in March last. Upon the last examination of the school, in November, the large number of twenty-two pupils passed. The children of public schools, under the supervision and instruction of the master, numbered 562—an increase of 76 over last year. Of these, 99 had been selected to compete for prizes in the elementary grades, and 61 had passed.

RAILWAY MATTERS.—The railway companies have, we are informed, been given to understand that they must adopt some means to establish a communication between passengers and the guards of trains, or the Government itself will prescribe a method for effecting that object. Acting upon this intimation, the railway companies are said to have appointed a committee of their managers to consider the best method of establishing the required communication.——The traffic receipts of railways in the United Kingdom amounted, for the week ending the 10th of December, on 11,732 miles, to 605,391*l*., and for the corresponding week of last year, on 11,395 miles, to 572,827*l*., showing an increase of 337 miles, and of 32,564*l*. in the receipts.

WATER SUPPLY: TOWNS, SOUTH DEVON. The corporation of this borough, including Bridgetown, have decided to carry out a system of water supply, and have called in Mr. Edward Appleton, of Torquay, to prepare the scheme and superintend the execution of the works, which are to be proceeded with at once.

LUDGATE-HILL RAILWAY STATION.—The temporary station of the Metropolitan Extension Railway at Ludgate-hill has been opened. This temporary structure, 300 ft. long, is built entirely of timber, and is entered from Bridge-street by way of Union-street and Water-lane. The exit is in Earl-street. It is not expected that the permanent station, which is nearer Ludgate-hill, will be completed before March or April. It will be, in almost all particulars, a counterpart of the station on the south side of the bridge. The chief difference will be in all the offices occupying a space below, instead of above. The architect of the new station at Ludgate-hill is Mr. John Taylor, jun., who designed the corresponding structure in the Blackfriars-road. The contractors are Messrs. Peto & Betts, for whom Messrs. Lucas Brothers have executed the main work of the building. The engineer is Mr. Cubitt.

IMPORTANT TO JOINERS: A WAGES QUESTION.—At the Public-office, Birmingham, a joiner sued Mr. Joseph Hardwick, builder, for 12*s*. 1½*d*., being wages alleged to be due for a half week's work done. The case was one which would decide a good many others of a similar kind. The complainant struck work without notice, on account of a certain resolution agreed upon by the masters, and Luke up in the shops. The wages due for the half-week that he had worked, were refused, on the ground that he had not worked out the week. The question was whether the men were engaged by the week or by the hour. The bench decided that, though they did not always give reasons for their decisions, they could not help saying in this case that they felt strongly that when an hour and a half was remitted on Saturday, it might be reasonably concluded that the sacrifice made was to be spread over the whole of the week, and that a week's wages were not fairly due until the long days, as well as the short ones, were worked out. They therefore dismissed the complainant's claim.

THE MAGNESIUM LIGHT.—A lamp for the purpose of burning the wire is said to have been invented by Mr. A. Grant, who is endeavouring to bring his design to practical perfection. Mr. Grant seeks to make magnesium cheaper still than the best stearine, and states that by burning a strip of zinc in conjunction with two strips of magnesium he is able to reduce the cost of the light by two-thirds. He even ventures to predict that magnesium will become as cheap as zinc, and that in course of time it will be possible to illuminate a street a mile long, at the rate of a halfpenny per hour! It is not a small thing to be able to record that photography is no longer dependent upon the action of the sun. The value of magnesium as an illuminator for the purpose of "signalling," is too obvious to escape immediate recognition. The portable nature of the contrivance, and its perfect immunity from risk of explosion, together with some other evident advantages, render its vivid light all the more practically valuable. Parisians, we are told, are going to make it figure on the stage, and have sent orders for some of Mr. Grant's lamps to illuminate their painted scenery.

GAS.—A cheap Gas Consumers' Company, we hear, is being started for the supply of London with gas at 2*s*. 9*d*. per 1,000 cubic feet, and announcements of reduction by the old companies have begun to be made.——At a recent meeting of the Birmingham Gas Consumers' Company, the secretary stated that since the movement was commenced for the formation of the company, several reductions in the price of gas had been made by the two gas companies, the average of which was about 21 per cent. below the price usually charged. And in addition to this reduction in price, they would be, and were, supplied with gas 40 per cent. better in illuminating power than before.——The supply of gas at Walsall is by the town commissioners: they have just announced a further reduction in price to an average of 2*s*. 6*d*. per 1,000; the street lamps 2*s*. 6*d*. per 1,000.——In Cork the Gas Consumers' Company have reduced the price of their gas to 4*s*. per 1,000 cubic feet; and for street lamps, 3*l*. each, to be lighted the whole year round. The company is paying 8 per cent. The original capital of the company was 40,000*l*.

Taking it Coolly.—On the Midland Railway Company's new line, between Whaleybridge and Buxton, at a place called Bugsworth, one of the sides of a deep sand cutting at the mouth of a tunnel suddenly gave way lately, killing one man and imprisoning eleven others and four horses in the tunnel. A number of men were set to work to remove the fall of sand, and the night had far advanced before they had effected their object. To their surprise they found that the eleven navvies had been steadily going on with their work in the tunnel all the time! The men had held a consultation, at which they came to the conclusion that proper steps would be taken to liberate them; and, as they could do nothing towards it themselves, they might as well pursue their ordinary tasks. From 200,000 to 300,000 tons of earth had fallen at the mouth of the tunnel.

The Wolverhampton and Leamington Surveyorships.—Mr. Anthony Morgan having given notice to the Leamington Board of Health of his resignation of the surveyorship and his appointment to that of Wolverhampton, the Leamington Board have passed a resolution expressive of their "approval of the satisfactory manner in which he has at all times discharged the various duties connected with the office of Surveyor to this Board, as also of the ability he has displayed as engineer of the extensive and important works connected with the river improvements, the sewage, and other public works carried on by him." The Board also expressed a wish to be allowed to avail themselves of Mr. Morgan's advice, should it be requisite to consult him at any time on the subject of the engineering works carried out by him in the town. Some discussion ensued as to whether steps should be taken at once to appoint a successor to Mr. Morgan, and it was ultimately decided to refer the subject to the highways committee.

Reduction of Wages in the Iron Trade.—The South Staffordshire iron trade have declared a reduction in the rate of puddlers' and millmen's wages, which they allege is rendered necessary by the present position of the iron trade. The selling price of manufactured iron, they urge, was reduced to the extent of 1*l.* per ton in June last, as some members of the trade thought unwisely; but the puddlers' and millmen's wages were not lowered in a corresponding ratio. The practice of the trade has always been to pay workmen's wages at the rate of 1s. per pound sterling on the price of finished iron; and while the men in this district have been and still are receiving the rate of wages for iron at 10*l.* 10s. per ton, the rates ruling in the market for finished iron are said to be in reality only 8*l.* 10s. Fourteen days' notice were to be given on the 31st instant for a general reduction of 1s. per ton in puddlers', and 10 per cent. in millmen's wages, through all the district.

Charcoal Fires.—Dr. Lankester has held an inquest at Kentish-town on the body of Mr. Ebenezer Walker, aged forty-one years, a master builder. Mrs. Anne Walker, widow of the deceased, said that on Sunday night last, at eleven o'clock, her husband, in order to warm the bedroom, placed a charcoal stove in it. He closed the register of the stove to prevent a draught. About twelve o'clock they went to bed, and soon fell asleep. She usually rose at seven; but on the Monday morning she did not wake till twelve in the day, then feeling very drowsy and ill. She turned and looked at her husband, who appeared to be asleep, but she found he was dead. Mr. Daniel Slyman, surgeon, said the cause of death was suffocation, arising from the foul air from the charcoal fire, there being in the room no means by which it could escape. The coroner said the cause of death was very plain, and Mrs. Walker might consider herself fortunate that she did not share the same fate as her husband. It was singular that a builder should not know the danger of placing a charcoal stove in a bedroom with no vent for the foul air. In great halls, where the supply of air was large, they were serviceable, but in bedrooms they were most dangerous. At this season builders used artificial means for drying purposes; but he hoped the fatal results arising from the use of charcoal in confined places would be borne in mind, and no life placed in jeopardy. The jury returned a verdict of "Death from accidental causes, arising from the mortal effects of suffocation by the fumes of a charcoal stove." We have often given warning of the peril to life arising from the use of such stoves in dwellings.

The Harrington Inundation.—In settling claims for damage occasioned by the late flood, Messrs. Bain, Blair, & Patterson, of the New Iron-works at Harrington, have acted, it is said, with becoming promptitude. The *Whitehaven News*, in speaking of this inundation, says:—"Nothing can be plainer than that a grave engineering blunder has been committed; and if no public inquiry into the causes of the catastrophe is to be held,—if the reservoir is to be re-constructed on the same principles,—then all we can say is that, in the presence of a constant danger, the inhabitants of Harrington are the most stoical or the most easily pacified of people. The reservoir at Harrington was from the design of Mr. Alexander Simpson, civil engineer, of Glasgow, but the works were carried out under the superintendence of the firm for whom the water was required. . . . In the bywash lay the error. This, even if completed according to the plans proposed, would, according to Mr. Kendall and other residents, have been totally inadequate to have carried off the surplus water in a rainy season."

Wimbledon Common.—The proposed Bill for the protection and improvement of Wimbledon Common has been printed. The Act constitutes Lord Spencer protector of the park, authorizing him to set aside a portion of the common, coloured pink on the plan, and enclose it with fences, so as, however, not to interrupt the view from the villas around, and to make walks, drives, and rides in the park, level obstructions, &c., and appoint gate-keepers and park-keepers. The park to be open at six o'clock in the morning, or at sunrise, if after six, and not to be closed till sunset. The park may be used for any purpose of practical public utility or interest, with the consent of the Home Secretary, when money can be claimed for entrance; but political meetings, open-air preachings, and meetings of clubs or benefit societies, are prohibited. Protector to have power of making regulations as to permitting refreshments to be sold in the park, and the like, for regulating quarries and pits used by the parishes, and for excluding gipsies and tramps. Provision is made for compensating those who had common rights. The map shows that only a strip of land is to be sold.

Non-Liability for Negligence of Fellow-Servants engaged in a common Employment.—In the case of Lovegrove *v.* The London, Brighton, and South Coast Railway Company, the plaintiff, a labourer, was employed by the company to dig ballast from a pit; and after filling trucks with ballast, to push the trucks along a temporary tramway to the main line, along which they were carried to their destination. The tramway was laid by plate-layers, and the plaintiff had nothing to do with its construction. Owing to the negligent manner in which the tramway was laid, a truck which the plaintiff was pushing ran off the line, and the plaintiff was hurt. This action having been brought by him against the company, it was held that the injury which he had sustained was caused by the negligence of a fellow-servant engaged in a common occupation with him, and that he could not recover damages from the company, no default on their part having been shown. The Court of Common Pleas, in which this action was brought, decided at the same time a similar question, in the case of Gallagher *v.* Piper, holding that the action could not be maintained.

Steel Wire-rope.—Some important experiments have been made with galvanized steel wire-ropes at the Dock Testing Works, Birkenhead. The testing was at the instance of Messrs. Jones, Quiggin, & Co., the iron shipbuilders, who are building a monster composite ship, the largest ever built in the Mersey. Being naturally anxious to have everything of the best and strongest for this vessel, they determined that the strength of all her materials should be thoroughly tested. For this purpose surplus pieces were cut from the wire rigging now in course of being manufactured for the vessel at Messrs. Garnock, Bibby, & Co.'s ropeworks. The testing showed the following extraordinary results:—4½-in. steel wire-rope, 57 tons 1 cwt., the Admiralty test for charcoal wire of this size being 24 tons 8 cwts.; 3¼-in. steel wire-rope, 24 tons 6 cwts., Admiralty test for charcoal wire of this size 13 tons 10 cwts.; 2⅝-in. steel wire-rope, 19 tons 6 cwts., Admiralty test for charcoal wire of this size, 8 tons 11 cwts. The experiments were under the inspection of Mr. M'Donald, superintendent of the Birkenhead Testing Works. *Mechanic's Mag.*

Tin.—The standards for tin ores were reduced 2*l.* per ton during the past week, and are now as follows:—Common, 89s. to 90s.; fine, 91s. to 92s. The reduction of 4*l.* in less than a fortnight has had a most depressive effect on Cornish tin-mining, and business is extremely dull.

Barmbro' Church, Yorkshire.—The new window in the chancel of this church has just been reglazed with stained glass. The tracery and two side compartments are filled with diapered glass, to harmonize with the two south windows in the chancel. The centre compartment represents our Lord delivering the charge to St. Peter, and placed below, in antique characters, "Feed my sheep, feed my lambs." To the left is the figure of a female at prayer, surmounted by an angel. On the right of the centre compartment is the figure of St. John writing his book of the Revelation. This is also surmounted by an angel. The window was executed by Messrs. Drury & Smith, of Sheffield. Other improvements have been completed at the cost of those of whom the window of which we have spoken is a memorial.

Petroleum, Paraffine, or Mineral Oil.—With the object of testing the merits and capabilities of this substance as fuel, experiments on an extensive scale have been lately made at Woolwich Dockyard. The plan under trial is simply to burn the petroleum through a porous material, which is placed in an iron chamber, dipped into a water-vessel, also of iron. The oil admitted into the chamber soddens the porous material, and rises by capillary attraction. The surface then catches fire and burns rapidly as long as the oil is supplied. The effect of the flame is said to be so great, that with the small apparatus, which is only 2 ft. superficial area, and affixed to a boiler, the oil has been utilized so as to be equal for steam purposes to five tons of coal. The objection to the use of this oil beyond its cost, seems to be the fear of explosion. A curious property of petroleum is said to have been discovered by Dr. Decaisne, of Antwerp, who announces that it instantaneously destroys that parasitical insect of the *Acarus* family which produces the human skin disease called itch; that all that is requisite is simply to apply the oil without even rubbing; and that the mere vapour of the oil will disinfect clothes tainted with the virus. If all this be true, doubtless there are other skin diseases thus curable; for more than one skin disease originates in parasitical causes. It may also turn out to be useful in gardens.

Mormonite Church Architecture.—The following description of the projected Mormon temple and tabernacle, is given by a correspondent of the St. Louis *Republican*, writing from Great Salt Lake City:—"That which strikes every observer of the temple is the very remarkable solidity of the stonework. It appears to be laid there to remain a thousand years, furnishing an unyielding support to the building that is to rest upon it. The style of architecture is somewhat novel. The front view shows three towers, the centre more elevated than those at the side. The rear end presents a view of three towers also, the side walls being strengthened with powerful abutments covered with pinnacles. The walls are lofty, and the entire air of the building, as represented in the view I saw, is imposing. There is no excess of ornament. All is substantial, dignified, and impressive. The building is not for the use of the congregations of the people, but for the priestly ordinances of the church. The people in their assemblages will meet in another building in the rear—the tabernacle. This is projected on a large scale, and on a very peculiar design. It is to be an oval building. I was told that the interior would correspond to the shape of an egg. At present fifty-two massive abutments of solid masonry, 10 ft. by 4 ft., show the exterior line of the structure. From the top of these abutments the oval roof will spring. The floor will be oval downwards, seated with rising seats as an amphitheatre. There will be no close-built walls. As the building is intended for vast congregations, ventilation and light are looked to, and the building will be nearly all windows and doors. It is 225 ft. deep by 175 ft. wide, and is calculated to hold 10,000 people. Here the teachers and others will enlighten the people, and their united souls will go up. The cost of these buildings must be immense; but all is contributed by the members of the Mormon church in labour and money.

ST. OSWALD'S, KIRK SANDALL.—A stained glass window has been placed in Kirk Sandall Church by the Rev. J. G. Gibbs, the curate, who recently took an interest in the restoration of this ancient edifice. During the progress of the restoration a small window of the early Norman church was discovered, and it is this window Mr. Gibbs has filled with stained glass. St. Oswald, the patron saint of the church, whose figure is represented, was king of Northumbria, and he was slain in the battle against the Pagan king of Mercia, A.D. 642. St. Oswald appears in regal attire, standing beneath a simple canopy. On his shoulder is perched the raven of which such wondrous tales are told. Messrs. Clayton & Bell, of London, were the artists.

TENDERS.

For the erection of drill-shed and head-quarters for the First Surrey Rifle Volunteer Corps, at Camberwell. Mr. J. T. Lepard, architect. Quantities supplied by Messrs. Lansdowne.

No. 1 Estimate.

Alldred & Doulton	£4,533 15 0

Newcastle-upon-Tyne: W. KAYE, Blackett-street.

WEALE'S ENGINEER'S POCKET-BOOK, 1865.

Now ready, roan tuck, gilt edges, price 6s. (postage 4d.)

THE ENGINEER'S, ARCHITECT'S, and CONTRACTOR'S POCKET-BOOK (LOCKWOOD'S, formerly WEALE'S) for 1865. Considerably improved, with many additions and several new plates. Besides the usual rule-of-thumb formation, rules, formulæ, tables, etc. etc. will be found a Diary of Events and Data, a General Calendar, a Gas-engineer's Calendar and Honory, Obituary of Eminent Engineers, etc. 1864-5, List of Members of the Institute of Civil Engineers, and of the Royal Institute of British Architects; Tables for the Reciprocal Conversion of British Weights and Measures into the Decimal or Metric System, etc. etc.

LOCKWOOD & CO. 7, Stationers' Hall-court, E.C.

WEALE'S BUILDER'S PRICE BOOK, 1865.

Now ready, 12mo strongly bound in cloth, price 4s. (postage 4d.)

THE BUILDER'S and CONTRACTOR'S PRICE BOOK (LOCKWOOD'S, formerly WEALE'S) for 1865, revised by G. R. BURNELL, Esq. C.E. This book is the universally recognized arbitrator in the settlement of disputed accounts. Not being printed from stereotype plates year after year, as is the case with other books of the kind, errors are not perpetuated, and the opportunity is taken in every reprint to introduce current prices and other desirable improvements. The present issue has been most thoroughly revised. Every line and figure has been carefully considered and compared with existing price lists.

LOCKWOOD & CO. 7, Stationers' Hall-court, E.C.

New Edition, price 4s. bound in cloth.

LAXTON'S PRICE BOOK for 1865, for ARCHITECTS, ENGINEERS, BUILDERS, CONTRACTORS, SURVEYORS, &c. (established 1846), containing, with a variety of new and useful matter, more than 50,000 Prices, embracing all the various trades connected with the operations of the Architect, Engineer, Builder, Contractor, and Surveyor; together with 10,000 useful and important Memoranda relating to the same. A so full Descriptions of various Stones for Building from the Quarries of England, Scotland, and Wales. Instructions for estimating and Contracting. Calculations and Sketches of Cast and Wrought Iron Girders, Columns, the METROPOLITAN BUILDINGS ACT, &c. &c. The whole carefully revised and corrected to this date.

SIMPKIN, MARSHALL, & CO. Stationers' Hall-court, E.C.

And all Booksellers in Town and Country.

Just published, in royal 32mo. roan, price 5s.

WANTED, a BUILDER'S CLERK, to TAKE CHARGE of a SET of BOOKS, also to ASSIST in ESTIMATING and MEASURING UP WORKS. One reference indispensable.—Address, L. E. Office of "The Builder."

TO BUILDERS' CLERKS.

WANTED, in the Office of a Builder and Contractor, in a provincial town, an efficient and experienced person, of exceptionable character, to undertake the principal of the Office as BOOKKEEPER and GENERAL ACCOUNTANT. He must have filled a similar SITUATION in a first-class firm, and produce satisfactory testimonials.—Address, stating salary required, A. D. Office of "The Builder."

TO ENGINEERS' ASSISTANTS.

WANTED, on a Railway Work, a thoroughly competent ASSISTANT to the Engineer.—Apply, by letter only, to C. L. care of Mr. Robert Lamb, Architect, 3, High North terrace, Darlington, stating age, qualifications, credentials, references, and terms.

WANTED, in a Builder's Office, a YOUNG MAN, aged 18 to 20, to Book Time and Materials, and make himself generally useful.—Apply, by letter only, to G. R. 13, St. Mary at Hill, E.C.

TO GILDERS, PAPERHANGERS, AND PAINTERS.

WANTED, a good WORKMAN, to whom constant employment will be given.—Apply to PILKINGTON & SCOTT, Decorative Painters, Lincoln.—N.B. None but steady and sober men need apply.—Reference required.

WANTED, for a Constancy, a Good THREE-BRANCH HAND. None but a good plumber need apply.—Address, J. X. K. Office of "The Builder."

TO BUILDERS' FOREMEN AND CLERKS OF WORKS

WANTED, a competent WALKING FOREMAN, to TAKE ACCOUNT of the MATERIALS, &c. required for the several works. Must be a good measurer of joiners' work, and a good accountant.—Address, stating age, salary required, &c. to F. B. M. Office of "The Builder."

WANTED, a SHOP FOREMAN.—He must be a steady, respectable man, thoroughly qualified to set out and overlook the execution of first-class Joiners' Work. Situation constant.—Apply, by letter, stating age, testimonials, and salary required, to F. C. Messrs. Ash & Flint's, Stationers, Wellington-street, London Bridge, S.E.

WORKING FOREMAN WANTED.—He must be a good and quick Joiner, sober, reliable, industrious, and competent when required to take charge of works. To such the situation would be permanent.—Address, stating age, previous engagements, and wages required, BELL, Office of "The Builder."

TO SURVEYORS

WANTED, at the end of January next, a few SURVEYORS, for SURVEYING and GETTING UP PLANS for RAILWAY and WATER WORKS abroad.—Apply by letter, R. M. care of Messrs. Hy. Adams & Co. Newspaper and Advertising Agents, 8, Parliament-street, Whitehall, S.W.

WANTED, EMPLOYMENT, by a first-class GRAINER and MARBLER, by Piecework.—Address, A. I. 53, Charrington-street, Oakley Square, N.W.

TO BUILDERS

WANTED, by an experienced Man, a RE-ENGAGEMENT as SHOP or GENERAL FOREMAN. Thoroughly understands his business. Twelve years in London. Has just finished a large Job in the country for one of the leading firms. No objection to the country. First-class references.—Address, M.B. Office of "The Builder."

WANTED, a SITUATION as BUILDER'S CLERK. Good bookkeeper, and has a thorough knowledge of the business.—Address, Y. Z. 36, Huntingdon-street, Barnsbury.

TO BUILDERS, CONTRACTORS, AND OTHERS.

WANTED, by an energetic Young Man, an ENGAGEMENT as General Practical ASSISTANT. Is a good draughtsman, well up in accounts, understands surveying and taking levels, and is competent to take the management of works. Satisfactory references as to ability and character.—Address, D. M. W. Post-office, Church street, Hackney. No objection to the country.

TO NOBLEMEN, LANDED PROPRIETORS, AND OTHERS

WANTED, by a thoroughly Practical Man, a SITUATION as MANAGER of a Brick and Tile Manufactory. Good references.—Address, prepaid, S. W. Post office, Yetminster, near Sherborne, Dorset.

TO BUILDERS, PLUMBERS, &c.

WANTED, by a Young Man, Constant EMPLOYMENT as a good PLUMBER, GAS-FITTER, and ZINC WORKER. Has no objection to fill up his time in Painting. Good references if required.—Address, J. S. Office of "The Builder."

WANTED, by a good JOINER, a SITUATION as WORKING SHOP FOREMAN.—Address, J. BLYTHE, Office of "The Builder."

WANTED, by a thoroughly practical Man, who has just completed a Job in the country, a RE-ENGAGEMENT, as GENERAL or WORKING FOREMAN, or to Take the entire Charge of a Job. Carpenter and joiner by trade. Prepares detail and other drawings, &c. Referee from last employer as to surveyor.—Address, A. B. at Mr. Watt's Library, 44, Adam-street, Vauxhall Bridge road, S.W.

TO MASTER PLUMBERS AND BUILDERS.

WANTED, by a practical PLUMBER, a JOB or SITUATION. Thoroughly understands his business in all its branches. No objection to help up time with plain painting or glazing. Town or country. References if required.—Address, E. B. No. 6, St. James-street, Clerkenwell, E.C.

WANTED, a SITUATION as FOREMAN of JOINERS. Can set out practical drawings, get out estimates, and measure up work.—Address, R. W. J. 72, Westbourne-street, Pimlico, S.W.

WANTED, by the Advertiser, a SITUATION as IMPROVER in a good Builder's Shop. Has been in the trade three years.—Address, W. GIFFORD, No. 5, Green-walk, near Blackfriars-road, S.

TO ARCHITECTS, &c.

WANTED, by a Young Man, a SITUATION in an eminent ARCHITECT'S OFFICE in London. He has had upwards of three years' practical experience in a first-rate office in a provincial town. Improvement is more an object than a large salary.—Address, W. J. H. Post-office, Rotherham, Yorkshire.

TO ARCHITECTS AND CONTRACTORS, &c.

THE Advertiser, aged 28, a first-class DRAUGHTSMAN, QUANTITY-TAKER, and MEASURER, will be happy to render ASSISTANCE, in town or country, either two or three days a week, or for a few hours daily. Terms 1*s*. per hour. Highest references, &c.—Address, A. B. Z. Post-Office, 107, Fleet-street, E.C.

TO ARCHITECTS AND ENGINEERS

THE Advertiser, who is a First-Class DRAUGHTSMAN, can Take Out Quantities, Measure off Work, and is well up in Land Surveying, is open to an ENGAGEMENT. Would not object to a situation as Clerk of Works, in which capacity he has acted previously.—For particulars, address, J. W. H. 73, Great Jackson street, Hulme, Manchester.

TO ARCHITECTS, SURVEYORS, &c.

THE Advertiser is desirous of a RE-ENGAGEMENT. A permanency preferred. Understands levelling and surveying, Parliamentary or otherwise, is conversant with drainage and has knowledge of taking off quantities, and is a careful draughtsman and colourist.—Address, KENT, 11, Lacey-terrace, Penton-place, Kennington, S.

TO ARCHITECTS, &c.

TEMPORARY ASSISTANCE rendered in PREPARING WORKING, DETAIL, and COMPETITION DRAWINGS, by an Assistant well versed in Gothic Architecture. Terms moderate.—App.y to E. L. 49, Norfolk-street, Strand.

TO BUILDERS.

TEMPORARY ASSISTANCE with Christmas Accounts, by an experienced Builder's Clerk.—Address, N. Post-office, Kennington-park, S.

PREMIUM to Engineers, Surveyors, Contractors, and Others.—A Graduate of a University and qualified Civil and Mechanical Engineer, wishes to have some EXPERIENCE under a well-known Engineer or Contractor, whose testimonial would be of value. A premium would be given.—Address, CIVIL ENGINEER, 151, Cheapside, E.C.

A CARPENTER and JOINER is in WANT of EMPLOYMENT. Aged 28. Day or piecework. References if required.—Address, B. T. Office of "The Builder."

TO BUILDERS AND ARCHITECTS.

A GENTLEMAN is wishing to make arrangements with a Competent Party for the ERECTION of a large BUILDING. A good Rent amply guaranteed till purchase-money is paid.—Address, C. A. B. at H. Crockford's, 38, Berners-street, Oxford-street.

TO BUILDERS, &c.

A YOUNG MAN, aged 30, is in want of a JOB. Is a good practical PLUMBER. Would have no objection to fill up his time at Painting or Glazing, if required.—Address, E. C. Plumber, 6, Bedford-terrace, Hornsey-road, Holloway.

TO ARCHITECTS.

A GOOD DRAUGHTSMAN WANTS an ENGAGEMENT, in London.—Address, G. A. H. Office of "The Builder."

A DRAUGHTSMAN, of considerable experience, is open to an ENGAGEMENT.—Address, REX, care of Mr. Lock, Stationer, 220, Gray's-inn-road.

A RESPECTABLE MAN requires a SITUATION as CLERK or FOREMAN to a Builder or House Decorator. Is thoroughly conversant with the Painting Business. A Joiner by trade.—Address, A. B. 5, St. Leonard street, Belgrave-road, Pimlico.

A GOOD LAND SURVEYOR, LEVELLER, and DRAUGHTSMAN, well up in Town Surveys, wishes to meet with EMPLOYMENT.—Address, D. 1, Brockley Villas, Brockley-road, New Cross, S.E.

AS CLERK, and to Assist in Collecting Accounts, &c.—A Young Man is in WANT of a SITUATION in a Builder's Office. Is thoroughly acquainted with the office routine, books, &c. Unexceptionable references.—Address, X. Y. at Mr. Rhind's, Stationer, Little Sussex-place, Hyde Park-square, W.

TO ARCHITECTS.

Temporary Offices—62, Old Broad-street, E.C.

ABRIDGED PROSPECTUS

This Company is formed for the purpose of erecting in the City of London a Public Auction Mart for the sale of landed estates and other property, now absolutely necessary in consequence of the late Auction Mart recently situate in Bartholomew-close, City, having been converted to other purposes and the insufficient accommodation afforded to the public elsewhere.

The Directors have secured on favourable terms an extensive freehold site in Tokenhouse yard, next to the offices of the General Credit Company, having a frontage of upwards of 100 feet. The site is admirably adapted to the requirements of the undertaking, not only from its central position, but from the great advantage it possesses in being free from the noise and disturbance of a leading thoroughfare.

The Directors propose to erect on the site of the existing houses, a handsome and substantial building, containing on the ground and first floors several large and smaller Sale Rooms; on the second and third floors, which are to be approached by a separate entrance, numerous Rooms and other accommodation, which can either be used as Sale Rooms, or for arbitrations, or let for offices. The basement will contain suitable refreshment accommodation and additional cellarage or offices to be also let off.

The revenue of the Company will consist:—First, of rents to be received from the auctioneers for the use of the Sale Rooms, the demand for which is continually increasing. Secondly, from rent to be received in respect of the Refreshment Department; and thirdly, the rents to be received for the Offices, Arbitration Rooms, Cellars, &c. from which sources the Directors confidently expect a most satisfactory dividend will be realised.

The undertaking originates with the Directors. There will be no "promotion money" paid to any one either directly or indirectly, and the preliminary expenses will be confined to such as are actually necessary to be incurred.

Prospectuses and Forms of Application for Shares may be had of the Solicitors; or of the Secretary, at the Temporary Offices, 62, Old Broad-street, E.C.

THE AUCTION MART COMPANY (Limited).—Notice is hereby given, that the SHARE LIST of this Company will be CLOSED on WEDNESDAY, the 4th of JANUARY, 1865, for London, and on the following SATURDAY for the County. By order, H. J. DOWDEN, Sec. pro tem.

Temporary Office, 62, Old Broad-street, E.C.

NORWICH UNION FIRE OFFICE.—

THE BONUS YEAR.

THREE-FIFTHS of the Profits of the Company are periodically distributed as a Bonus to parties insuring, who have thus from time to time received from the Society sums amounting in the aggregate to nearly 440,000*l.*

A FURTHER BONUS of 29,027*l.* has been declared in respect of Premiums paid prior to Michaelmas, 1863, and will be paid by deduction from the current Premium, on the renewal of existing Insurances.

EXAMPLES OF PREMIUMS REDUCED BY THIS BONUS.

No. of Policy.	Sum Insured.	Annual Premium.	Reduced Premium for 1864.
	£	£ s. d.	£ s. d.
441,411	92,340	222 4 4	120 2 2
450,136	12,000	63 0 0	35 0 0
484,173	9,800	51 14 0	19 16 8
500,376	5,000	7 10 0	4 6 4

THE RATES OF PREMIUM ARE IN NO CASE HIGHER than those charged by the other principal offices giving no Bonus to their Insurers.

No charge is made for the Policy or Stamp when the Insurance exceeds 200*l.* or for Insurances transferred from other Offices.

The Business of the Company exceeds seventy Millions, and, owing to the liberality with which its engagements have been performed, is rapidly increasing. The duty paid to Government for the year 1863 was £41,852. 11s. 9*d.*; the amount insured on Farming Stock was 10,263,272*l.*

The Norwich Union Fire Office is the LARGEST OFFICE making a return to its Insurers.

For Prospectuses, apply to the Society's Offices, 29, Fleet-street, E.C.; and Surrey street, Norwich.

SECRETARY—George William Lovell.

ASSISTANT SECRETARY—John J. Brownfield.

Insurances against Loss by Fire are effected by the Phœnix Company upon every description of Property, in every part of the world, on the most favourable terms.

The promptitude and liberality with which its engagements are always met by this Company are well known; and the importance of its relations with the public may be estimated from the fact that since its establishment it has paid more than Eight Millions and a Half Sterling in discharge of Claims for Losses by Fire.

Insurances with this Company expiring at Christmas must be renewed within fifteen days thereafter, or they will become void.

Receipts are now ready at the principal Offices, Lombard-street and Charing-cross, and with the respective Agents throughout the United Kingdom.

THE NATIONAL BOILER INSURANCE COMPANY (Limited),

CHIEF OFFICES—18, CHANCERY LANE, LONDON.

BRANCH OFFICE—22, ST. ANN'S SQUARE, MANCHESTER.

Tables of Rates for Insuring Steam and Marine Steam Boilers can be had on application at the Offices of the Company.

A reduction of 10 per cent. will be made off all Premiums in cases where the Company's Patent Fluid Gauge is used.

By order of the Board,

J. W. DANIELL, Secretary.

WHEELS.—KING'S CROSS PATENT WHEEL COMPANY (Limited) Carriage, Omnibus, Waggon, Cart, and Road Wheels of every description made of the best materials and workmanship, on the shortest notice, for home use or exportation. LIFE DEPARTMENT.—Under the provisions of an Act of Parliament, the Company now offers to new Insurers EIGHTY PER CENT. OF THE PROFITS, AT QUINQUENNIAL DIVISIONS, OR A LOW RATE OF PREMIUM without participation of Profits.

Since the establishment of the Company in 1821, the sum total of Profits allotted to the Assured has exceeded in Cash value 500,000*l.* which represents an Indent Reversionary Bonus of £11 per cent.

After the Division of Profits at Christmas 1859, the Life Assurances in Force, with existing Bonuses thereon, amounted to upwards of 4,730,000 M. the Income from the Life Branch 96,000*l.* per annum, and the Life Assurance Fund, independent of the Capital, exceeded 1,618,000*l.*

FIRE DEPARTMENT.—Insurances are effected upon every description of property, at home and abroad, on moderate rates.

No expense is incurred in effecting a New Insurance beyond the payment of the Annual Premium and Duty, when the Premium amounts to 5*s.*

Claims liberally and promptly settled.

Notice is hereby given, that Fire Policies which expire at Christmas must be renewed within fifteen days at the Office, or with Mr SAMS, No. 1, St. James's-street, corner of Pall-mall, or with the Company's Agents throughout the Kingdom; otherwise they become void.

Applications for Prospectuses and Agencies to be made to the Secretary.

PATENT CONCRETE STONE COMPANY, Limited. The Offices of this Company will be REMOVED on the 31st instant, to more commodious Premises, at No 2, QUEEN STREET PLACE, SOUTHWARK BRIDGE, E.C.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

TERRA COTTA and Fine STONEWARE POTTERY, warranted to stand Frost.

JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has since early harvest at his manufactory the manufacture of TERRA COTTA and FINE STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.

A Medal at the International Exhibition was awarded, in Class 10, Section C. Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."

Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Crosses, Ironstone, Vases, Statues, Brackets, Consoles, Garden Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c. &c.

Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.

MINTON, HOLLINS, & CO. Stoke-upon-Trent, beg to inform architects, the gentry, and others, that in consequence of the increasing demand for their Encaustic and Mosaic Pavements, and with the view of facilitating the execution of orders, they have opened an additional Show-room, at their Establishment, No. 39, Compton-street, London, where experienced draughtsmen will be constantly in attendance, to afford all information required.

DRAWINGS and ESTIMATES, on the receipt of plans, will also be promptly furnished, on application at the Manufactory, Stoke-upon-Trent.

MINTON & CO. take the present opportunity of stating that they have always in stock a large and varied assortment of tiles, suitable for flower boxes, stoves, and other ornamental purposes.

JOHN ARCHBUTT & SONS, 291, Westminster-bridge-road, Lambeth, near Astley's Theatre.

AWNINGS FOR FOUNDATION STONES.

CARY & PRIER,

DE BEAUVOIR FACTORY, SOUTHGATE ROAD, N.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Stamping for Driving bands, Lubricators, &c. fully justifies the strong recommend drops they have every where received. Their durability and strength, permanent contact, slip and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, solids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 9*in.* to 36 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta Percha Articles, such as Fishing Rods, Pump Backets, Fire-buckets, Beams, Union-joints, Flasks, Bottles, Bowls, Tobacco Trays, Chair-rings, Gas-tube Lutters, Tobacco Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country.

THE GUTTA-PERCHA COMPANY, PATENTEES, WHARF ROAD, CITY ROAD, LONDON.

ROBINS & CO.

To whom the Prize Medal was awarded in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all purposes to which cement is applicable. Orders received at Great Scotland-yard, Whitehall, and at the Works.

PURE HYDRAULIC LIME, Manufactured from the best HALKIN MOUNTAIN LIMESTONE, same as supplied for the construction of the Liverpool and Birkenhead Docks.

The HOLYWELL LIMESTONE COMPANY are prepared to deliver the above, in lump or ground, packed in bags, into waggons, at the Holywell Station of the Chester and Holyhead Railway, or on board vessels at Greenfield Wharf, Chester River.

Prices and particulars furnished on application to Mr. EVAN EVANS, Manager, Pary's Mine Works, Holywell, Flintshire.

The Company guarantee the quality of the Lime to be equal to that used by the Engineer of the Liverpool and Birkenhead Docks.

Agents wanted. No applications attended to without a banker's reference.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, and in barrels and bags. The Limestone can be had in full cargoes, also their Cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to E. & W. AARON, Agents, 56, South John-street, Liverpool

ROMAN, PORTLAND, PARIAN, and KEENE'S CEMENTS.

See Advertisement first Saturday in the Month, or on application.
87, BISHOPSGATE STREET WITHOUT, LONDON, E.C.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London Atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether all under the name of "Improved Zinc Paint," or as the manufacturers of Pure Zinc Paint do, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS. Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

LITTLE CASTERTON FREESTONE.
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD,
The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, is much used for water works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE is used largely by London Builders.

CAEN and AUBIGNY STONE.
FOUCARD, BROTHERS,
STONE MERCHANTS and QUARRYMEN.
Cargoes shipped to order from Caen to any port. Contracts taken for any quantities.
Office—10, Three Crown-square, Southwark.

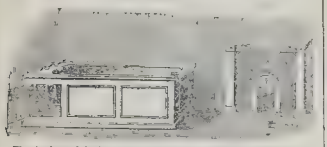
READE & HEWITT'S PATENT PNEUMATIC PAN and SELF-ACTING WATER CLOSETS, RAILWAY URINAL, and SILVER FLUSHING APPARATUS.
The simplest, strongest, and cheapest Closets manufactured, acting efficiently with or without supply Cistern, and at high or low pressure. Especially adapted for railway stations, offices, public buildings, workshops, and any situations where subjected to severe usage. Prevents waste of water, saves piping, cranks, wires, service-box, and all the complicated apparatus of self-acting closets.
The Self-acting Pneumatic Flushing Vessel flushes ranges of urinals regularly at intervals, the time between the discharges being regulated by a simple tap, thus saving an immense quantity of water, which ordinarily runs to waste.

Best Pan Closet, complete £2 12 6
Best Self-acting Closet, complete 2 15 0
Railway Urinal Flushing Vessel, complete 3 3 0
LIVERPOOL, CANNING CHAMBERS, 4, SOUTH JOHN STREET.
An Agent is required for the sale of the above in London.



J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, sufficient flushing is obtained. Any number can be worked by one cistern. Any of the valves can be easily, and without trouble, repaired. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application, or sent free, by the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

J. TYLOR & SONS' PATENT BATH APPARATUS.

The bath and boiler may be fixed in the same or separate rooms anywhere below the level of cold-water cistern. Open or close fire at pleasure. No brickwork setting for boiler required.

Estimates given from architects' drawings, or by inspection of buildings.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to

DOULTON & WATTS, LAMBETH POTTERY,

LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE D STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,

Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for cider cellars at the Royal Agricultural Society's House in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, and like to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully requested to send their orders DIRECT to the FACTORY, as the finest brands of coals supplied with a good article, and in lengths best suited to their roofs. The original works where the above roofing is made are F. McNEILL & CO'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the DAIRIES at ALDERSHOT, CURRAGH, SLORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 45 lbs. to the square of 100 feet, the cost of carriage is small.—6th. It may be laid on slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.
CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and
DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

CROGGON & CO. 2, DOWGATE HILL, LONDON; 2, GOREE PIAZZA, LIVERPOOL; And 59, GEORGE SQUARE, GLASGOW.

AYLESFORD and BURHAM BRICK WORKS, near Maidstone, Kent.
MR. GEORGE FURNESS
Having increased his mechanical appliances for the Manufacture of Bricks by erecting a number of the most approved patent machines, Architects, Builders, and Contractors are respectfully informed that they can be supplied with QUALT BRICKS of the best quality, and at moderate prices.—Prices and particulars furnished on application to
MR. SLATER,
Thames Embankment, Cannon Wharf, Westminster.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

ELIGIBLE FREEHOLD LAND in the heart of the City.—The Court of the Worshipful Company of Mercers are prepared to receive TENDERS for the SITE of the PREMISES numbered 2, 3, 4, 5, 6, and 7, on the east side of Basinghall-street, in the City of London, on a Building Lease of 61 years from Michaelmas, 1865. A plan of the ground, which may be tendered for either in three portions, four portions, or in its entirety, may be seen at the Office of Mr. GEORGE SMITH, Surveyor to the Mercers' Company, Frederick place, Old Jewry, E.C. where sealed Tenders are to be delivered on or before TWELVE o'clock on the 31st DECEMBER, indorsed "Tender for Ground, Basinghall-street."

SUNBURY COURT ESTATE.—This Estate is now TO BE LET, on building leases, for the erection of Detached Residences of a superior class. The property is situate within a mile of the Sunbury Station, and within three-quarters of a mile of the Hampton Station of the Thames Valley Railway. For particulars, apply to Mr. R. B. ARNTZ, Architect and Surveyor, 4, Cannon row, Westminster, S.W.

WATERSIDE MANUFACTURING PREMISES, with Steam-power.—Messrs. FULLER & HORSEY are instructed to LET on LEASE, extensive WATERSIDE PREMISES, occupying a site of 21,000 superficial feet, situate on the Wenlock Basin, City-road, and comprising a spacious and substantial modern brick built manufactory of two floors, engine and boiler houses, with 50 horse power engine, two Cornish boilers, range of brick built offices, and paved yards with gateway entrances. There is a water frontage of about 200 feet. For further particulars, apply to Messrs. FULLER & HORSEY, 13, Billiter street, London, E.C.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms, stabling for eight horses and coach houses for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 28 acres; gravelly soil; near Sunningdale Station, South Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell square.

TO BUILDERS.—First-class BUILDING SITES TO BE LET or SOLD, at Hampton, Teddington, and Kingston. Each of the sites is within a few minutes' walk of the railway station.—Plans can be seen, and further particulars obtained of Mr. G. R. GREEN, Architect, 44, Bedford row, W.C. Advances made to responsible builders on any of the above estates.

GIPSY HILL, NORWOOD. — Valuable PLOT of FREEHOLD BUILDING LAND, comprising about 2½ acres, with frontages to good roads, TO BE LET or SOLD. Rent, 100l. per annum on a building lease, or could be divided if required. For particulars, apply to Mr. FARRELL, Auctioneer and Land Agent, 1, Walbrook, Mansion House.

AN ACRE of LAND is WANTED to BUILD Ornamental ALMHOUSES on. The north side of London, and near a railway station, preferred.—Particulars to be sent to Messrs. HUNT & STEWARD, 4, Upper Charles-street, Parliament-street, S.W.

TO BUILDERS and OTHERS. — GEO. TODD has numerous clients, ready to PURCHASE FREEHOLD or LEASEHOLD HOUSES, Land, or Ground Rents of any description.—Full particulars to be sent to GEO. TODD, Auctioneer & Surveyor, 8, Panton-square, Piccadilly; and at his Survey Branch Office, Battersea Bridge road, Battersea Park, S.W.

GEO. TODD has a few Acres of BUILDING LAND to BE LET (leases 99 years), facing Wandsworth Common, Surrey side. For particulars, apply at his Auction, Land, and Estate Agency Offices, 8, Panton-lane, Backlersbury, E.C.

FREEHOLD LAND TO BE SOLD, or LET on BUILDING LEASES; about three acres at Selhurst-road, Norwood Junction; about two acres at Devonshire road, Forest Hill Station; and 95 feet frontage at Wells road, Sydenham.—Apply to M. & J. GARNAR, 8, King-street Bermondsey New Road, S.E.

IMPORTANT to BUILDERS, CONTRACTORS, and OTHERS.—TO BE SOLD, a very valuable ESTATE eligibly situate in an improving neighbourhood west, comprising about Twenty Houses, part let, from 6l. to 15l. per annum, and part in an unfinished condition, together with about 20 acres of BUILDING LAND held for a term of years at a nominal ground-rent.—Apply to ROBERTS & HARDING, 61, Chancery-lane.

TO BUILDERS and OTHERS.—TWO FREEHOLD PLOTS of LAND, the property of the Worshipful Company of Tilers and Bricklayers, TO BE LET, by Tender, on lease, for building purposes, for the term of ninety years, land-tax redeemed. For plans and particulars, apply to Mr. YOUNG, Surveyor, 35, King street, Cheapside.—Tenders for the above plots must send in the same, under sealed cover, to Mr. W. C. MANSFIELD, the Clerk to the Company, No. 1, Aupton place, Gray's-inn-road, endorsed "Tender for Building Land," on or before the 12th day of JANUARY, 1865, but the Company do not bind themselves to accept the highest or any Tender.—By order,
W. C. MANSFIELD, Clerk.

LARGE LIME WHARF TO BE LET, situate on the Regent's Canal, with good dwelling-house, offices, stables lofts, &c. For particulars apply to Messrs. LE BLANC & CO Solicitors, 18, New Bridge street, E.C.
